| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I should certainly abandon the whole of my manufacturing concerns.                                                                                                          |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. I would remove with my machinery and the wreck of a large fortune to some country, the Government of which has the sagacity to appreciate and protect capital and industry. |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. In building and machinery about 96,000 dollars—all my own property; besides about \$40,000 of active capital.                                                               |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                               | 34. It would require a considerable addition to enable me to realize 6 per cent., as my previous answers show.                                                                  |

HARDMAN PHILIPS.

Having, so lately as December last, furnished to the Secretary of the Treasury all the particulars relative to the number of persons, horses, &c., employed about my works, I have confined my answers in the within principally to the consideration of the duties on screws, which are rendered next to inoperative by the enormous discounts allowed at this time, and for some years past, on screws of foreign manufacture—a system that must be revised to enable the manufacturer of this country to compete with any prospect of success. In the hope of this revision taking place, instead of discontinuing the manufacture in toto, I have done so only in part, making at this time only about 500 gross per week, of the different sizes, whereas my machinery, with the improvements which I have still continued to make, is adequate to the regular production of 1,500 gross per week. The space allowed for answers in the enclosed document not being sufficient to render a calculation very intelligible, I beg leave to repeat a contrast of the cost of importing screws in 1825, (when I first began to sell to any extent worth notice) and on occasion of the greatest discount being allowed, which was 65 per cent. in the last year.

|                                                   |       |
|---------------------------------------------------|-------|
| In 1825, suppose an invoice, value \$100, at par, | \$100 |
| Charges 10 per cent.,                             | 10    |

|                                         |       |
|-----------------------------------------|-------|
|                                         | \$110 |
| In 1825 the duty was only 30 per cent., | 33    |

|                       |       |
|-----------------------|-------|
| Cost to the importer, | \$143 |
|-----------------------|-------|

Suppose the same invoice, at the period of the greatest discount being allowed, which was in 1831, when very large importations were made at 65 per cent. discount, and the duty was 40 per cent.—

|                   |          |
|-------------------|----------|
| Invoice as above, | \$100 00 |
| Discount,         | 65 00    |

|                       |         |
|-----------------------|---------|
|                       | \$35 00 |
| Charges 10 per cent., | 3 50    |

|                    |         |
|--------------------|---------|
|                    | \$38 50 |
| Duty 40 per cent., | 15 40   |

|                               |         |
|-------------------------------|---------|
| Cost to the importer in 1831, | \$53 90 |
|-------------------------------|---------|

Thus, although in 1825 the duty was only 30 per cent., the cost to the importer must have been \$143, whilst in 1831, though the duty was then 40 per cent., the cost was only \$53 90, showing most conclusively, that, on the present system of levying duties on the prices of *other* countries, it acts in exactly in inverse ratio of what it ought to obtain, the duty being highest when least needed, and a mere mockery, when the distress of foreign nations causes their manufacturers to avail themselves of pauper labor.

I would further beg leave to notice the want of relation, from the above data, on the duty on screws, and that on the wire from which they are made.

|                                                                                                  |                  |
|--------------------------------------------------------------------------------------------------|------------------|
| The standard screw, 1 inch, No. 10, costs, per printed lists, 1s. 4½d.                           |                  |
| ster'g, or, in cents                                                                             | 30½              |
| Highest discount that has been allowed, 65 per cent.                                             | 19½              |
|                                                                                                  | <hr/> 10½        |
| Charges 10 per cent.                                                                             | 1                |
|                                                                                                  | <hr/> 11½ say 12 |
| Duty 40 per cent.                                                                                | 4.80             |
| To make one gross of such screws (1 inch No. 10) 1½ lbs. of wire is needed, duty 6 cents per lb. | 7.50             |
|                                                                                                  | <hr/> 2.70       |

The discount at this time would average 51 or 52, but I have assumed, in the above calculations, the highest that I have known to be allowed, to exhibit in the clearest light the *certainly* of the prostration of any establishments exposed to the *possibility* of such a state of things.

The most practicable remedy, it appears to me, would be to levy the duty on the selling prices of the principal hardware houses, in which case it ought to continue at 40 per cent. I should prefer specific duties, but for the necessity of so many different rates for the different sizes. Bed screws ought to be included in the alteration. If the duties were properly regulated, there is not a doubt that all the screws needed in the country would soon be manufactured in it; but, under present circumstances, no man whose capital is not actually engaged in the manufacture would think of embarking in it.

As to the duties on iron and wire, if the frauds in the collection of the former be guarded against, I am of opinion that they will suffice for the protection of the manufacturer; but if they be lowered, this section of the country will be ruined—the agriculturist as decidedly as the manufacturer.

HARDMAN PHILIPS.

Since writing the above, I have received a copy of the memorial to Congress of the hardware merchants of New York; on the following passage, in which, in page 3, I beg leave to make some remarks: "and while screws cost in England, ready made, less than the raw material here, no attempt to make them can succeed. A gross of 2 inch screws No. 14, weighs 3½ lbs., and cost, in 1830, 26 cents, which is 8 cents per lb., allowing nothing for waste; the wire to make them of costs here about 10 cents per lb., the duty alone being 6 cents."

The above quotation, intended to injure, benefits my cause in two ways. First, by proving the truth of the monstrous discounts which I have alleged to have been allowed, as will appear by the following calculation:

|                                                                             |          |
|-----------------------------------------------------------------------------|----------|
| One gross of 2 inch screws No. 14, is rated in the English printed lists at |          |
| 5s. 4d. sterling, or, in cents,                                             | 74 cents |
| Discount 65 per cent.!!!                                                    | 48       |

|                                             |           |
|---------------------------------------------|-----------|
| Cost in England, as stated by memorialists, | 26 cents. |
|---------------------------------------------|-----------|

2dly. By showing that the hardware men themselves, who are now complaining, are the only persons in the United States who benefit by these low prices. The people have no part in it. I follow up their own estimates to prove the assertion.

|                                                         |           |
|---------------------------------------------------------|-----------|
| Cost in England, thus admitted,                         | 26 cents  |
| Cost of importation, as stated in table B, 75 per cent, | 19½       |
|                                                         | <hr/> 45½ |

Yet the price charged by the regular hardware houses for such screws is still 88 cents per gross, the same as when the discount was from 40 to 45 per cent. only!!!

Can further proof or argument be needed to show the necessity of the measure which I advocate; particularly when I assert, positively, that 40 per cent. assessed on the selling price would enable the manufacturer in this country to compete both in price and quality, successfully, with any imported screws whatever? Less would not.

HARDMAN PHILIPS.

Having been called on to examine and report upon the quality of wood screws made at Philipsburg, Pennsylvania, we hereby certify that we have tried them in our different manufactories, in the severest and most complete manner, with the hardest woods, and have found them in every respect satisfactory. They appear to us to be made from the best of iron: and although it might be going far to say that they are superior to *James's*, we do not hesitate to pronounce them, in our judgment, fully equal.

D. PHYFE,  
JOS. MEEKS & SONS,  
ALEX. P. W. KINNAN,  
WM. H. WALSH,

*Cabinetmakers in the city of New York.*

### DOCUMENT 14.—No. 24.

*Statement of Isaac McKinney's Iron Manufactory.*

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                  | 1. Centre county, Pennsylvania.                                                                                                                          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                       | 2. Blast furnace; water power; products, pig metal, castings.                                                                                            |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                    | 3. A. D. 1825; individual property.                                                                                                                      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                            | 4. \$45,000.                                                                                                                                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                            | 5. \$20,000.                                                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                      | 9. Last three years average between 800 and 900 tons.                                                                                                    |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                         | 12. 55 men, wages \$16 to \$30 per month; most have families.                                                                                            |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                           | 13. 8 to 12 hours per day employed; whole year.                                                                                                          |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                           | 14. Wages in neighborhood \$11 to 16 per month, (not at iron works.)                                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. 30 horses, 3 yoke of oxen.                                                                                                                           |
| 16. Whether the manufacturers find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                 | 16. Two-thirds sold at home, one-third sent to sea board. Metal sold at home is manufactured into bar iron and blooms, and principally sent to seaboard. |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Principally sold at 6 months' credit.                                                                                                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Wages have advanced about 25 per cent.                                                                                                               |

## DOCUMENT 14.—No. 24—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. Sales for a time \$35 per ton, then \$30, now \$25, for pigs.                                                            |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                               | 23. Reduction of duty on iron would be ruinous, should be increased.                                                         |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Small, and probably will be smaller, owing to increased expense in raising coal, and an increased distance to draw coal. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                         | 27. Above \$10,000.                                                                                                          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                   | 29. Abandon.                                                                                                                 |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                           | 30. Agriculture, probably.                                                                                                   |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per centum?                                                                                                                                                                           | 31. Derangement of business would be so great, that it is impossible to answer this question.                                |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                              | 32. Similar works are so numerous as not to be supported in the neighborhood—must compete with foreign.                      |

GENTLEMEN: Your interrogatories are answered above as far and as accurately as they could be answered by a notice of two or three days.

Respectfully, yours, &c.,

D. McKINNEY  
for I. McKINNEY.

DAVID LYNCH,  
WM. B. FOSTER.

## DOCUMENT 14.—No. 25.

● *Blast Furnace and Forge, Centre County, Pennsylvania.*

| QUESTIONS.                                                | ANSWERS.                           |
|-----------------------------------------------------------|------------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Centre county, in Pennsylvania. |

## QUESTIONS.

2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established, and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power, and in machinery?
5. Average amount in materials and in cash for the purchase of materials, and payment of wages?
7. Causes of the increase (or decrease, as the case may be) of profit?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?
12. Number of men, women and children, employed, and average wages of each class?
13. How many hours a day employed, and what portion of the year?
15. Number of horses or other animals employed?
16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?
17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?
18. Where are the manufactures consumed?
20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?
21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?
22. The prices at which the manufactures have been sold by the manufacturer since the establishment?
23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?
24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?

## ANSWERS.

2. Blast furnace and forge; by water power.
3. We went in operation in 1829. Individual enterprise.
4. Forty-five thousand dollars.
5. Yearly stock in trade, twenty thousand dollars.
7. We attribute the decrease in price to the competition in the market of our own manufacture, and the increase of foreign iron of every shape and form imaginable.
9. In 1831 we made 1,070 tons pig iron, at \$22 to \$25; 60 tons castings, at \$60, and 240 tons blooms at from \$55 to \$65 per ton. This is, for each year, a fair estimate.
11. We believe our iron, on impartial investigation, to be equal to foreign (old Sable) iron. In this market worth \$100.
12. 75 hands employed annually: average wages 20 dollars per month.
13. 12 hours per day in the summer, and some of the hands the same in winter; others about eight hours in winter.
15. 60 head of horses, and 10 yoke of oxen.
16. Mettle is generally exchanged for blooms, which is sent 120 miles to market.
17. It is a notorious fact that, on offering our iron in the sea board market at this time, we are at once told that the market is so completely stocked with foreign iron, at reduced prices, that our own manufacture will scarce maintain refunding prices, under existing expenses.
18. In the United States.
20. All sales at 4 and 6 months' credit.
21. Our expenses has increased five per cent. annually since our commencement; but in no other way.
22. In 1829 we sold blooms at \$1 00. They had decreased at one time 20 per cent.; but now are worth \$95.
23. The tariff of 1828 is fully adequate to our protection, if its provisions are put in active force.
24. We are led to believe there are many frauds committed.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                        | ANSWERS.                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>25. Our profits has been so very limited that we did not make any dividends.</p>                                                                                                                                                                                                             |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                           | <p>27. We consume annually 2,000 bushels wheat; 6,000 bushels rye and corn; 1,000 bushels oats; 14,000 lbs. bacon and beef; 1,000 bushels potatoes; 70 tons hay; 50 tons straw, and upwards of \$8,000 of domestic manufactured articles of different kinds.</p>                                |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p>                                                                   | <p>29. No sooner shall the proposed reduction on the foreign manufacture be established, than the domestic manufacturer makes a choice of necessity, and be compelled to abandon his pursuits.</p>                                                                                              |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p>                                                                                                                                                                              | <p>31. Distressing, indeed, in our opinion, would be the business of our country, if (after a reduction of import duties of 12½ per cent.) we would be unable to engage our capital in other business that would not be infinitely more profitable, and without half the liability to lose.</p> |
| <p>32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p>                                                                                                                                               | <p>32. No. 16 answers this question.</p>                                                                                                                                                                                                                                                        |
| <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                                                                                                                                               | <p>33. Not a dollar of borrowed capital is the concern.</p>                                                                                                                                                                                                                                     |
| <p>34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction shall be?</p>                                                                                                                                                                 | <p>34. The candid opinion of most manufacturers of iron, at this time, is, that any reduction of duty that would tend to increase the foreign article in our market, must eventually drive us out, and destroy us as manufacturers.</p>                                                         |

GENTLEMEN: From the short notice we have had to do so, we have endeavored to give as correct answers to queries in the above schedule as we possibly could.

Respectfully, yours,

LLOYD & McNAMARA.

April 25, 1832.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                               | 1. County of Centre, and State of Pennsylvania.                                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                    | 2. Blast furnace, by water power.                                                                            |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                 | 3. In 1830, by individuals.                                                                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                         | 4. Twenty-five thousand dollars.                                                                             |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                        | 5. Twenty thousand dollars.                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory; description, quality, and value of each kind?                                                                                                                                   | 9. We made last year about 900 tons pig iron, which have been sold at \$ 23 per ton at the works.            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. 65 hands employed; wages from \$ 15 to \$ 30 per month.                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. About 40 horses and 2 yoke of oxen.                                                                      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. In the United States.                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                              | 20. At six months' credit.                                                                                   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. Twenty-three and twenty-five dollars per ton.                                                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Our branch of manufacture would not bear any reduction of duty; if reduced we must abandon.              |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. A part in agriculture; the rest uncertain.                                                               |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                                                                                                            | 31. Every branch of business in our country, that we are acquainted with, would be more productive.          |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. Domestic competition has brought our article to the sea board prices, deducting the actual freight paid. |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. Forty-five thousand dollars; \$ 15,000 of which is borrowed.                                             |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Centre county.                                                                                                                                                         |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Cupalo or pocket furnace; water power.                                                                                                                                               |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Commenced in 1828. Individual concern.                                                                                                                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Two thousand dollars.                                                                                                                                                                |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. One thousand dollars.                                                                                                                                                                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. To queries 6 and 7 we answer, that to the first we cannot give an explicit reply; to the second, our profits yearly average about what they were when we first commenced operations. |
| 7. Causes of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 8. To query 8 we cannot give a definite reply.                                                                                                                                          |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 9. 20 tons; ploughs, machinery; ploughs in value \$ 2,000, of a first rate quality, cast metal.                                                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory; description, quality, and value of each kind?                                                                                                                                                                | 10. Quantity 20 tons; value \$ 500; all domestic, procured in the county.                                                                                                               |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 11. None of the kind imported.                                                                                                                                                          |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 12. Four men, one dollar per day; not constantly employed.                                                                                                                              |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 13. Six hours in the day.                                                                                                                                                               |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 14. Can give no accurate reply.                                                                                                                                                         |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 15. Two horses.                                                                                                                                                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 16. Sold at home.                                                                                                                                                                       |
| 16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                                                                                                                                                                                            | 17. No foreign competition.                                                                                                                                                             |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 18. In Centre county, principally.                                                                                                                                                      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 19. None.                                                                                                                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                             | 20. Sometimes for cash; a credit for three months only, payable in money.                                                                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 21. Answer given to this in queries 6 & 7.                                                                                                                                              |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year, from establishment of the manufactory?                                                                                                                                 |                                                                                                                                                                                         |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. Price the same from the commencement. See answers to 9 and 10.  |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                               | 23. The rates as they are now established by law.                   |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                         | 24. No change necessary; we are content.                            |
| 25. What has been the rate of your profits annually for the last three years; and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Can give no definite answer.                                    |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                             | 26. See answers to queries on this subject above.                   |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                         | 27. About one thousand dollars.                                     |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                     | 28. Can give no accurate answer.                                    |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                 | 29. Quit the business if reduced, beyond all doubt.                 |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                           | 30. Probably in making washing machines or other notions.           |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                            | 31. Impossible to say, until after trial.                           |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                              | 32. They are not remote, so far as regards this section of country. |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                             | 33. Two thousand dollars; none borrowed.                            |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction shall be?                                                                                                                                                               | 34. If any reduction takes place we are destroyed.                  |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                                                                                         | 35. Can't give an accurate answer.                                  |

| QUESTIONS.                                                                                                                      | ANSWERS.                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                             | 36. We are not aware of the extent of the supposed frauds.                  |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                     | 37. We sell all we can manufacture without much delay.                      |
| 38. Extent of individual or household manufacture in the United States, and how much it has increased since the tariff of 1824? | 38. It has greatly increased, but cannot say to what extent.                |
| 39. Average profit of money or capital in the United States?                                                                    | 39. Cannot say.                                                             |
| 40. Average rate of wages?                                                                                                      | 40. Answered above as regards our establishment; can give no further reply. |

GEORGE LEIDY &amp; Co.

April 24th, 1832.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Bellefonte, Centre county, Pennsylvania.                                                                                                                                                                                                                                             |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Edge tool manufactory; water power.                                                                                                                                                                                                                                                  |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1824, by Wm. and H. Mann.                                                                                                                                                                                                                                                         |
| 4. Capital invested in ground and buildings, and water power, and in machinery.                                                       | 4. Six thousand dollars.                                                                                                                                                                                                                                                                |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Twenty thousand dollars per annum in materials, and twenty thousand cash.                                                                                                                                                                                                            |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Amount of articles manufactured as follows: 30,000 axes, 500 broad axes, 38 adzes, 2,000 chisels, 600 scythes, 160 hoes, 2,000 shovels, 4,000 patent forks, 1,000 hand axes, 500 cooper axes, 500 cooper adzes, 1,000 drawing knives, 200 cleavers, 200 hatchets and other articles. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. 80 tons of iron, 12 tons of imported cast steel, 2 tons German steel, 200 tons anthracite coal, 100 tons bituminous coal, 10,000 bushels charcoal, 100 tons grinding stones, 200 pounds borax.                                                                                      |
| 12. Number of men, women and children employed, and average wages of each class?                                                      | 12. 40 men, average wages \$1 per day.                                                                                                                                                                                                                                                  |
| 13. How many hours a day employed; and what portion of the year?                                                                      | 13. Ten hours per day.                                                                                                                                                                                                                                                                  |
| 15. Number of horses or other animals employed?                                                                                       | 15. Six horses.                                                                                                                                                                                                                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. Sent to Philadelphia, 200 miles; New York, 300 miles.                                                                                                                                                                                                                               |

DOCUMENT 14.—No. 28.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. They do to a very great extent, particularly light tools.          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. In the United States.                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Cash at six months' credit.                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. On all carpenter and cooper tools at least fifty per cent.         |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We could not compete with imported articles, and would abandon it. |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. About \$10 per month.                                              |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Centre county.                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Cupalo; water power.                                                                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Commenced in 1827; individual concern.                                                 |
| 4. Capital invested in ground and building, and water power, and in machinery?                                                                                                                                                                                                                       | 4. Fifteen hundred dollars.                                                               |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Eight hundred dollars.                                                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6 & 7. Our prospects are about what they were when we first commenced.                    |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              |                                                                                           |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 15 to 18 ploughs, machinery ploughs, in value \$1,600; first rate quality, cast metal. |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                         | 10. Quantity 16 tons; four hundred dollars; all domestic, procured in the county. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                         | 11. None of the kind imported.                                                    |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                        | 12. Three men, \$1 per day, not constantly employed.                              |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                        | 13. Six hours in the day.                                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. One horse.                                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. Sold at home.                                                                 |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. No foreign competition.                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. In Centre county, principally.                                                |
| 19. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                                                                                                                                                | 19. None.                                                                         |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Sometimes for cash; a credit for three months only, payable in money.         |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. Price the same from commencement. See answers to 9 and 10.                    |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. The rates as they are now established by law.                                 |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                        | 24. No change necessary; we are content.                                          |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. About eight hundred dollars.                                                  |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Quit the business if reduced, beyond all doubt.                               |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. They are not remote, as far as regards this section of the country.           |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. \$1,600; none borrowed.                                                       |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction shall be?                                                                                                | 34. If any reduction takes place we are done.                                     |

| QUESTIONS.                                                                                                                       | ANSWERS.                                                     |
|----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                              | 36. We are not aware of the extent of the supposed frauds.   |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                      | 37. We sell all we can manufacture without much delay.       |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824? | 38. It has greatly increased, but cannot say to what extent. |

JOHN DOLBERMAN.

April 25, 1832.

## DOCUMENT 14.—No. 30.

*Bloom and Bar Iron Manufactory, in Centre County, Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                          | ANSWERS.                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                           | 1. Centre county, Pennsylvania.                                                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                | 2. Forge for manufacturing blooms and bar iron by water power.                                                 |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                             | 3. Completed in 1829. Not a joint stock concern.                                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                     | 4. Twenty thousand dollars.                                                                                    |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages.                                                                                                                                                                                                     | 5. Five thousand dollars.                                                                                      |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. About six per cent.                                                                                         |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                      | 8. From fifteen to fifty per cent.                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                               | 9. Fifty tons of blooms and fifty tons of bar iron; best Junia ta blooms \$60, and bar iron \$80 at the forge. |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                     | 10. 150 tons of pig mettle; cost \$4,500.                                                                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                   | 12. Twenty-five men and five boys at \$25 and \$10 per month.                                                  |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                    | 13. Twelve hours per day all the year on an average.                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                     | 15. Twelve horses and eight oxen.                                                                              |

## DOCUMENT 14.—No. 30—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. A small proportion of bar iron sold at the forge; remainder sent 150 miles.              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. At Pittsburgh.                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. On a credit of three to six months.                                                      |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. Blooms from 80 to 95 dollars per ton; and bar iron from 95 to 120 dollars in Pittsburgh. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. At the rate of the tariff of 1828.                                                       |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. Five thousand dollars agricultural; two thousand other.                                  |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I would abandon the business.                                                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. I would go to some other country, and seek for better protection.                        |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction should be?                                                                                             | 34. By any reduction of the tariff of 1836, six per cent. could not be realized.             |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. Answered in query 12th.                                                                  |

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages.                                                                                                                                                            | 5. Yearly stock in trade twenty-five thousand dollars.                                                                                                                                                                                                                                |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                      | 7. We attribute the decrease in price to the competition in our own manufacture, and the increase in the market of foreign iron of every shape and form imaginable.                                                                                                                   |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. In 1831 we made 980 tons pig iron, \$25; 30 tons castings, \$60; 50 tons bar iron, \$80; 280 tons blooms, \$65. This is, for each year, a fair estimate.                                                                                                                           |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                             | 11. We believe our iron, on impartial investigation, to be equal to the foreign (Old Sable) iron; in this market worth \$100.                                                                                                                                                         |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                            | 12. 85 hands employed annually; average wages 22 dollars per month.                                                                                                                                                                                                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. 12 hours per day in the summer, and 8 in the winter.                                                                                                                                                                                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                             | 15. 43 head of horses, and 3 yoke of oxen.                                                                                                                                                                                                                                            |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. One-third at the manufactory; the balance we send 300 miles.                                                                                                                                                                                                                      |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                  | 17. It is a notorious fact that, on offering our iron in the sea-board market at this time, we are at once told that the market is so completely stocked with foreign iron at reduced prices, that our own manufacture will scarce maintain refunding prices under existing expenses. |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the United States.                                                                                                                                                                                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. All our sales are at 4 and 6 months' credit.                                                                                                                                                                                                                                      |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Our expenses has increased in labor 5 per cent. annually, since our commencement, but in no other way.                                                                                                                                                                            |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. In 1825 we sold bar iron in the sea-board market at 100 dollars. It has decreased in price four per cent. per annum. It is now 80 dollars per ton.                                                                                                                                |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                  | 23. The tariff of 1828 is fully adequate to our protection, if its provisions are put in active force.                                                                                                                                                                                |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                           | 24. We are led to believe there are many frauds committed.                                                                                                                                                                                                                            |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                            | 27. We consume annually 2,000 bushels wheat; 5,500 bushels rye and corn; 35,000 pounds pork and beef; 1,000 bushels potatoes; 50 tons hay; 35 tons straw; 500 bushels oats, and 6,000 dollars of domestic manufactures of different kinds.                                            |

DOCUMENT 14.—No. 31.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> | <p>29. No sooner shall the proposed reduction on the foreign manufacture be established, than the domestic manufacturer, making a choice of necessity, will be compelled to abandon his pursuits.</p>                                                                                                 |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                          | <p>30. Do not know.</p>                                                                                                                                                                                                                                                                               |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even, after a reduction of the import duties to 12½ per cent.?</p>                                                                                                          | <p>31. Distressing, indeed, in our opinion, would be the business of our country, (if, after a reduction of import duties to 12½ per cent.,) we would be unable to engage our capital in any other business that would not be infinitely more profitable, and without half the liability to lose.</p> |
| <p>32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p>                                                                             | <p>32. No. 16 answers this question.</p>                                                                                                                                                                                                                                                              |
| <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                                                                            | <p>33. Not a dollar of borrowed capital is the concern.</p>                                                                                                                                                                                                                                           |
| <p>34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction shall be?</p>                                                                                              | <p>34. The candid opinion of most manufacturers of iron at this time, is, that any reduction of duty that would tend to increase the foreign article in our market must inevitably drive us out, and destroy us as manufacturers.</p>                                                                 |

GENTLEMEN: In the above schedule, we have answered such queries as we, at such short notice, conveniently could.

Respectfully,

IRWIN & HOUSTON.

*Iron Works, Centre County, Pennsylvania.*

| QUESTIONS.                                                                                  | ANSWERS.                                                                                                           |
|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p>                            | <p>1. Situated in Centre county, Pennsylvania.</p>                                                                 |
| <p>2. Kind or description of the manufactory, and whether water, steam, or other power?</p> | <p>2. Two forges, one furnace and rolling mill, and nail factory.</p>                                              |
| <p>3. When established, and whether a joint stock concern?</p>                              | <p>3. First commencement of these works about 1800, since improved and enlarged. Owned only by the subscriber.</p> |

DOCUMENT 14.—No. 32.—Continued.

## QUESTIONS.

4. Capital invested in ground and buildings, and water power, and in machinery?

5. Average amount in materials, and in cash for the purchase of materials and payment of wages?

6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?

7. Cause of the increase, (or decrease, as the case may be,) of profit?

8. Rates of profit on capital otherwise employed in the same State and county?

9. Amount of articles annually manufactured since the establishment of the manufactory. Description, quality, and value of each kind?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed, and what portion of the year?

14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? If bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

## ANSWERS.

The works are situated on 3 tracts of about 1000 acres of land; part of it is fit for cultivation, the buildings extensive and good. The water power first rate; machinery good, though not now in complete repair. Annexed to the works are about 10 or 15,000 acres of land, part good farming land, and part mountainous.

6 & 7. I had a large capital invested until the end of the war of 1812, and for a few years afterwards. Then provisions and goods and labor became cheap, so that the manufacturers of iron were enabled to sustain the difficulties arising from various causes, until the tariff of 1828. I had hitherto sustained very severe reverses successfully, and since that, the competition, from the increased number of manufactories, has made the difficulties no less great.

8 & 9. The rate of profit has varied. From 1812 to 1828 hammered, at Pittsburgh, brought 120 to \$200 per ton. Since that time, its price is about \$110—the different qualities in proportion. My trade has been generally with Pittsburgh.

12, 13, & 14. I employ generally about 75 wood choppers in winter and spring. Some work by the job, some by the cord at about 40 cents. The average of all our lands is now about 100, formerly much greater in number. My works are not at this time so extensively in operation as they were a few years ago. The wages of laborers bear a proportion to those otherwise employed. By the day about 75 cents: per month, from 16 to 30 dollars.

15. About 80 horses and oxen are employed.

16. Much of the iron I make is hammered, which has a readier sale at the works than rolled bar iron. My market is generally at Pittsburgh.

17. The market being at Pittsburgh, the foreign competition is not so great as at the sea-board. Still it has an injurious influence.

19 & 20. The iron I make is sold on credit or barter. The credit is suited to the merchant who purchases, and the barter, such articles as bacon, glass, &c., which I use, or can again sell at par.

21. The cost of iron to me has varied from 1812 to this time, from various causes.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>22. The prices at which the manufactures have been sold by the manufacturer since the establishment?</p>                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                                                                                                                                                | <p>22 &amp; 23. The duty on iron is not more than sufficient to protect the manufacturer. My trade has been and may be with Pittsburgh by wagons. My works are in a new country, which is not altogether able as yet to supply us with necessaries, so that they must come from abroad at great cost and labor. When these disadvantages no longer exist it will be different. A few years hence we will be able to go to Pittsburgh by canal, &amp;c. except a land carriage by wagons of 30 miles.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                                                                                                                                                                          | <p>24. The necessity of protecting us from fraud comes from the importation of railroad iron. Something ought to be done in this respect.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p>25. What has been the rate of your profits, annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>25. From many causes, not excepting the increased number of iron works in this country, profits have been small.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                          | <p>26 &amp; 27. I use about 5000 bushels of rye and corn, 5000 wheat, 50,000 weight beef and pork, besides articles of foreign and domestic merchandise, both cotton and woolen; also a large quantity of groceries, &amp;c.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p>                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                                                                                                                                                                                                                                                                                                                                                  | <p>29. It is out of the question that I could continue in this business if the duty is reduced to 12½ per cent. I consider it even now too low. Nor can it be that a corresponding reduction of duty on articles of foreign manufacture used by me, would have any reducing or saving effect. I am confirmed in this belief by the experience of 40 years. Since the tariff of 1828, domestic goods, such as are used at iron works, have become cheaper and better, and in much greater abundance: the farmer has a ready sale for his produce, and a general prosperity prevails. All this will increase and continue if the Government does its duty. If the tariff is in the least diminished, the very reverse must be the consequence. The protection which the tariff of 1828 has afforded to manufactures, has produced astonishing effects. For many years our farmers had a small surplus for the seaboard market, but generally at bad prices; now the prices are as good, if not much better, at home, than abroad. The agricultural interest therefore is assisted as well as that of the manufacturer, and no change from foreign war can disturb it if the Government does not interfere.</p> |

In addition to the foregoing, I would submit a few facts. In the years 1813, 1814, 1815, 1816, 1817, land varied from 12 to 30 dollars per acre. Difficulties arising from the war, &c. &c. &c. reduced it to the minimum. Industry effected wonders, but the tariff of 1828 assisted the farmers effectually. Since that the price of land per acre has increased gradually from \$18 to \$38 per acre. This arises from the market we have at home. We are 350 miles from the seaboard, and the market of the farmer there would not be greater than at home. Hence the increase of price per acre.

P. BENNER.

Rock Iron Works, 16th April, 1832.

| 1. State and county in which the manufactory is situated?                            | 1. Bald Eagle valley, county of Centre, and State of Pennsylvania.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. One forge, with six fires, one furnace, and one rolling mill, now in operation, and propelled by water power. We are constructing, and preparing to erect, another furnace and forge on said Bald Eagle creek.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 3. When established; and whether a joint stock concern?                              | 3. The above forge was in operation in 1811; the furnace in 1818; and the rolling mill in 1830. I am now in partnership with three of my sons, in the proceeds of said establishments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?      | 4. I own about thirty thousand acres of land, a part whereof is very fertile, and well improved and tenanted. A considerable portion is composed of ridge and barren land, calculated to supply iron works with timber and iron ore. My head and tail races are very long, for the purpose of procuring a sufficiency of water power; and my dams have been erected at a considerable expense. There are upwards of sixty-two houses occupied by the workmen, besides four good and substantial houses for myself, managers, and clerks. I might, of course, calculate the various plantations, the ore and wood tracts, the buildings, the grist and saw mills, the water power and machinery, during the existing tariff, worth to me and family two hundred thousand dollars. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?              | 7. After the last war provision and store goods decreased in price, and labor sunk accordingly, which enabled the iron-masters, who survived the shock occasioned by the reduction of the duties, to make a handsome profit till 1828; then the rage of iron works became so great, that provisions and labor rose rapidly in price, so that the greatest economy and attention became requisite to make much profit, particularly when the great competition lowered the price of iron at home, at Pittsburgh, and on the sea-board.                                                                                                                                                                                                                                            |

| QUESTIONS.                                                                                                                                        | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p>      | <p>9. From 1811 to 1828, I sold hammered iron in Pittsburgh from \$150 to \$220 per ton; but has lately been reduced to \$110. In Baltimore I sold iron, in 1828, for \$105 per ton; and have since sold some for \$80—in consequence, I presume, of the great competition occasioned by the erection and renewal of several other iron works, lately put into operation in this and other States by enterprising individuals, who had placed implicit confidence in the stability and permanency of our laws.</p> |
| <p>12. Number of men, women, and children, employed; and average wages of each class?</p>                                                         | <p>12. During the winter we employ, of late years, about 100 wood choppers, at 40 cents per cord; and during the spring, summer and fall, some of the said choppers are employed in coaling and hauling wood and leaves. At the works now in operation we employ about 75 hands, besides a considerable number now engaged at the new works. The wages of said seventy-five men might be averaged at \$250 annually. We do not employ any women, except in the boarding houses.</p>                                |
| <p>13. How many hours a day employed; and what portion of the year?</p>                                                                           | <p>13. At the forge they generally work by the job. At the furnace and rolling mill some are bound to perform their respective undertakings; and the monthly hands generally work during the whole day, except at meal hours.</p>                                                                                                                                                                                                                                                                                  |
| <p>15. Number of horses or other animals employed?</p>                                                                                            | <p>15. We use, for various purposes, 69 horses and 4 yoke of oxen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <p>16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?</p>                                  | <p>16. We do not sell the sixth part of our iron at the works, and are therefore forced to forward some to Pittsburgh, and the greater part by water to Philadelphia, to Baltimore, and to New York.</p>                                                                                                                                                                                                                                                                                                           |
| <p>17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?</p>                 | <p>17. I deem it superfluous to remark, that our iron on the sea-board must meet with too much competition; and I am apprehensive that our railroads and canals will enable foreigners to pester us with the sales of our iron in our own vicinity. But time will develop to what extent we might be thereby injured.</p>                                                                                                                                                                                          |
| <p>20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?</p>                | <p>20. I had formerly purchased a considerable portion of my necessities for bar iron and for castings; but the great increase of iron works has materially curtailed that advantage. Our iron on the sea-board is generally sold on a credit of six, nine, and twelve months.</p>                                                                                                                                                                                                                                 |
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> | <p>23. I am of the opinion, that the actual rate of duty is low enough to enable us to compete with the foreign iron, particularly when we are obliged to conduct our works in a mountainous and newly settled country, where the farmers are not able to meet at present, the immense consumption required by the many works now in operation. But if Congress will be inclined to continue the</p>                                                                                                               |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                         | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                                                                                                                                                                            | <p>present duties for ten years longer, the iron masters would then disregard all competition from abroad; for during that time they would become more versed in the knowledge of labor-saving machinery; more stone coal banks would be discovered; the canals and railroads would be fully completed; the fertile part of the country would be more improved; the population would become more dense; and labor and provisions would be more easily procured, and at a much cheaper rate.</p>                                                                                                                                                                                                                                                                                                                                                                 |
| <p>25. What has been the rate of your profits, annually, for the last three years? and, if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>24. If the importers of railroad iron could be obliged to pay the full duty on all the railroad iron imported; in that case our Government, at the end of each year, should reimburse to all the railroad companies the whole duty on all the iron actually consumed in the construction of their respective railroads during said year. This course would, in my humble opinion, do justice to all parties, and check the imposition practised by designing men.</p>                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                            | <p>25. By the aid of our rolling mill, we manufactured, last year, 625 tons. Our profits amounted to above six thousand dollars; but during the two preceding years, collectively, we hammered and rolled about 665 tons; and our profits in said two years (in consequence of failures in some of our customers,) did not amount to quite \$8,000. We made no dividend, for we purchased property for the new establishments.</p>                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p>                                                                     | <p>27. We consume 6,000 bushels of rye and corn; 4,500 bushels of wheat; about 100,000 weight of beef and pork; about 200 tons of hay; from 12 to 15,000 bundles of straw; and 1,000 bushels of oats and buckwheat; and foreign and domestic store goods to upwards of \$20,000.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                                                                                                                                                                                    | <p>29. I am at a loss to ascertain how the Government can reduce the importation of iron at so many different sea ports without checking it by a heavy duty; and I do, therefore, feel confident that I would be annually sinking money, under a protection of 12½ per cent. If the General Government, or some file leader of the anti-tariffists, would purchase my property at a fair valuation, I would, in that case, cheerfully undertake merchandising, and enjoy thereat the sweets of life, and at the same time educate my family, and clear more money with the capital vested in those works; but a repeal of the duty on iron, without a sale, completely nullifies the capital, for the property is generally calculated for iron works, and would then become no object to any man of business. Those, however, who own a good ore bank, and</p> |

| QUESTIONS. | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>plenty of wood contiguous to their work, will be able to escape the shipwreck, and afterwards become wealthy; for the competition at home then will be done away by the destruction of forge owners, and even of those who have small capitals, and have to haul their wood and ore too far. Permit me now, in conclusion, to state that Congress, during the last war, doubled the duties on all foreign imports, and encouraged the citizens to commence manufacturing, by declarations on the floor of Congress that the duties should be continued; but, to their astonishment, the duties were repealed immediately after the war, and the country so much inundated with foreign goods, that the manufacturers, who had, unfortunately, confided in the stability of the Government, became bankrupts. After the lapse of a few years another Congress experienced the necessity of a protective system, and passed a new tariff act on a larger scale; but the manufactories, during the war, passed by sheriff sales into the hands of a more fortunate set of men, and some of the original owners and families are to this day employed through the country to earn a pittance by the sweat of their brows. Are the present members of Congress preparing for the same game? I hope not, but am nevertheless apprehensive of the result of their proceedings this session.</p> |

## DOCUMENT 14.—No. 34—Continued.

## QUESTIONS.

6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?

8. Rates of profit on capital otherwise employed in the same State and county?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?

11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed, and what portion of the year?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?

17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries; and if so, where?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

25. What has been the rate of your profits annually for the last three years; and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually.

## ANSWERS.

6. Nine per cent. on original capital \$10,000; none borrowed; often largely in debt, without interest. No wages allowed for the five active partners.

8. 25 per cent. on store-keeping; other business not known.

9. 1,200 tons of pigs at \$25; 700 tons bar iron at \$90; 50 tons nails at \$140; 1,000 tons of above pigs used in making the iron.

10. 11,000 cords of wood, 4,000 tons of ore, 30,000 bushels stone coal; all domestic, and included in charges above.

11. Iron of same quality from Russia and Sweden from \$90 to \$100; English of inferior quality at lower rates.

12. Men 106, wages from \$14 to \$50 per month, average about one dollar per day.

13. At work about ten hours each day all the year.

15. 60 horses; no other animals employed.

16. About one-seventh sold at home; balance sent from two to seven hundred miles.

17. At our distant markets they do, but never here.

18. Philadelphia, New York, Pittsburgh, and Louisville, Kentucky.

19. None that we know of, except a few blooms to England to be tried for steel.

21. The price of labor has varied highest in 1815 to 1820, lowest from 1820 to 1824; great advance since.

22. From 1815 to 1820 bar iron at \$130 to \$220 at distant markets.

23. For charcoal iron \$1 per cwt. is ample; we fear no nation at that rate of protection.

25. We believe our profits to be about \$10,000; this income is mostly laid out in woodlands and real estate, mostly for the use of the works.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. 10 to 12,000 bushels of rye and wheat, 60,000 lbs. pork, 30,000 lbs. beef.                                                                                                                                                                   |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We think iron needs more protection than many other articles there is so much labor necessary, and that of the hardest kind, the machinery used being common to all countries; at 12½ per cent. less than present prices we would not go on. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. Towards the seaboard, no foreign comes within 90 miles.                                                                                                                                                                                      |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. None borrowed.                                                                                                                                                                                                                               |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction should be?                                                                                             | 34. We are unable to say.                                                                                                                                                                                                                        |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Centre county, Pennsylvania.                                                                                                                          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Furnace and forge; water power.                                                                                                                       |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established in 1830; joint stock.                                                                                                                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Fifty thousand dollars.                                                                                                                               |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 7. Profits have decreased: cause, decrease in price of iron; increase in price of wages to hands.                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 900 tons pig iron, value at the works for the part sold, \$24 per ton; 75 tons castings, \$50; 250 tons blooms, \$60; 50 tons bar iron, \$75 per ton. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. A part of pig iron sent to Philadelphia and Baltimore; value \$22 at the works.                                                                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Number of men 88, at \$22 per month, principal part of which have families.                                                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. Average 10 hours.                                                                                                                                    |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. In this county, about \$17 per month.                                                                                                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Fifty horses, two yoke oxen.                                                                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                                                                                                                                                                                                                    | 16. One-fourth sold at works, the balance sent to Philadelphia, Baltimore, and Pittsburgh; 200, 260, 260 miles.                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sales at 6 months; bartered for grain, beef, pork, vegetables, and store goods.                                                                      |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. Our establishment is a new one, and not fairly brought into operation; cannot fairly answer all those queries.                                       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Answered above; 9th query.                                                                                                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present rate of duty until the price of labor comes down.                                                                                        |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Our expenses as yet have exceeded our profits.                                                                                                       |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Not ascertained.                                                                                                                                     |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 5,000 bushels rye and corn, 2,000 do. wheat, 20 tons pork, 15 tons beef; amount of other domestic articles not known.                                |
| 29. If the duty upon the foreign manufactures of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                   | 29. We would be compelled to abandon our works at a great loss.                                                                                          |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. We cannot say; but should we be compelled to stop, the greater part would be lost.                                                                   |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Any business would be better, had we any thing left to commence with.                                                                                |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. We formerly sent large amounts of iron to western parts of New York, in exchange for salt, but at present that market is supplied with foreign iron. |

## DOCUMENT 14.—No. 36.

*Lamar Furnace, Centre County, West District, Pennsylvania, April 13, 1832.*

| QUESTIONS.                                                                                                                                                                                                                                                                                            | ANSWERS.                                                                                                                      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                             | 1. Centre county, Pennsylvania.                                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                  | 2. Furnace; water power.                                                                                                      |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                               | 3. Established in 1830; joint stock.                                                                                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                       | 4. Thirty thousand dollars.                                                                                                   |
| 6. Annual rate of profit on the capital invested, since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Unprofitable as yet.                                                                                                       |
| 7. Cause of the increase, (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Owing to the diminished value of the manufactured article, and increased price of agricultural products, and hands' wages. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                 | 9. 1,000 tons pig iron, rate at the works, \$24 per ton; 175 tons castings at \$50 per ton.                                   |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. Number of men, fifty; generally families; wages \$21 per month.                                                           |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                      | 13. Averaging 10 hours.                                                                                                       |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                      | 14. \$17 per month.                                                                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                       | 15. 30 horses; 3 yoke of oxen.                                                                                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                             | 16. A portion sold at the works; balance sent to Philadelphia and Baltimore, 200 miles.                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                            | 20. Sold at 6 months; bartered for beef, pork, wheat, rye, &c.                                                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                            | 21. This establishment is comparatively new; and has not yet been fairly tested.                                              |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                            | 23. The existing duty ought to be continued, until at least a diminution of the price of labor takes place.                   |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                      | 27. 4,000 bushels rye, 1,500 bushels wheat, 15 tons pork, 5 tons beef, and 1,000 bushels potatoes, 40 tons hay.               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                | 29. Would be compelled to abandon our business.                                                                               |

## DOCUMENT 14.—No. 36—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                              | 30. Cannot say. An abandonment of business would probably occasion insolvency. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. In reference partly, but not entirely so.                                  |

CURTZ, HEPBURN, &amp; Co.

## DOCUMENT 14.—No. 37.

*Iron Furnace and Forge, Columbia County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Columbia county, Pennsylvania.                                                                                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Furnace and forge; by water power.                                                                               |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Furnace built in 1820, forge 1827; owned by an individual.                                                       |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | *4. Valued in cash at \$30,000.                                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Fifteen or sixteen thousand dollars.                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Two and a half per cent.; none borrowed worth mentioning.                                                        |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Increase the last year, on account of a more perfect knowledge of working the ore, and constant supply of water. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Say from 6 to 15 per cent.                                                                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 400 tons: 300 of which is pig iron, at \$29, and 100 tons castings, \$70 per ton; bar iron, 100 tons, at \$90.   |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Coal and ore, \$7,000.                                                                                          |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. From 70 to 85 dollars per ton.                                                                                  |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Say 40 men, at about 75 cents per day.                                                                          |

## DOCUMENT 14.—No. 37—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. About 12 hours.                                                                                          |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Perhaps about the same.                                                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Fourteen on the works, and six additional hired during the year.                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Nearly all sold at the works, or within 20 or 30 miles.                                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. Light English or Swedish iron can be sold in this district 20 per cent. lower than manufactured here.    |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In the neighborhood of the works, except a few tons for gun barrels, on account of its superior quality. |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. None.                                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Seventy-five per cent. barter, 25 per cent. cash.                                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. No material change.                                                                                      |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. From \$100 to \$90 at present.                                                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Light iron 20 per cent. increased duty, heavy iron less.                                                 |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Best answered at seaports.                                                                               |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Say perhaps three per cent.                                                                              |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Principally in the materials and labor.                                                                  |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Perhaps \$8,000; domestic \$1,000.                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Could not manufacture at reduced prices.                                                                 |

## DOCUMENT 14.—No. 37—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                              | 30. Ruin would be the consequence, inevitably, as my property would depreciate to nothing.                                                                                                  |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                               | 31. Reduction of duty would be ruinous to the business, and annihilate the value of the property: so that which is now valuable, would then be useless, and I would have nothing to invest. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. Not out of foreign competition either for iron or salt.                                                                                                                                 |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                | 33. Answered above.                                                                                                                                                                         |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                   | 34. Increase the duty.                                                                                                                                                                      |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                 | 37. In this district 80 per cent.                                                                                                                                                           |

## DOCUMENT 14.—No. 38.

*Iron Foundry, Columbia County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Columbia county, Pennsylvania.                                       |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Iron foundry, in operation by water power.                           |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1831; individual.                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. About \$2,000.                                                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About \$5,000.                                                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Not long enough in operation to ascertain.                           |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Mill gearing, machinery, and pattern work, generally about \$6,000. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Eight men, average \$20 per month.                                  |

| QUESTIONS.                                                                                                                 | ANSWERS.                                                     |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| 13. How many hours a day employed, and what portion of the year?                                                           | 13. Fourteen hours the whole year.                           |
| 15. Number of horses or other animals employed?                                                                            | 15. Two.                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 16. Sold at the foundry.                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 20. Six months, generally.                                   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 22. Castings from $4\frac{1}{2}$ cents to 8 cents per pound. |

## DOCUMENT 14.—No. 39.

*Iron Forge and Furnace, Columbia County, Western District of Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                              |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Columbia county.                     |
| 2. Kind or description of the manufactory?                                                                                            | 2. Forge and furnace. Furnace not in blast this year. |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Five thousand dollars.                             |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 4. Three thousand five hundred dollars.               |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Two per cent.                                      |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Foreign iron and competition.                      |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Fifty tons bar iron.                               |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?        | 8. Five thousand bushels coal.                        |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                        | 9. From sixty-five to eighty-five dollars.            |
| 10. Number of men, women, and children, employed, and average wages of each class?                                                    | 10. Eight men.                                        |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Twelve hours per day.                             |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. In the district.                                  |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 13. Light iron considerably.                          |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 14. Where are the manufactures consumed?                                                                                                   | 14. Columbia county, principally.                               |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None.                                                       |
| 16. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit? if bartered, for what?                 | 16. Cash and barter.                                            |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. From \$100 to \$90, at first.                               |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Heavy duty on light iron, and increased duty on heavy iron. |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Two and a half per cent.                                    |
| 21. Average rate of wages?                                                                                                                 | 21. About 75 cents per day.                                     |

## DOCUMENT 14.—No. 40.

*Iron Foundry, Erie County, Western Pennsylvania.*

| QUESTIONS.                                                                                                                 | ANSWERS.                                         |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                  | 1. Erie county, Pennsylvania.                    |
| 2. Kind or description of the manufactory?                                                                                 | 2. Foundry for making castings of various kinds. |
| 3. Capital invested in ground and buildings?                                                                               | 3. Five hundred dollars.                         |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                            | 4. Amount of materials and wages, \$1,500.       |
| 5. Annual rate of profit on the capital invested?                                                                          | 5. Twenty per cent.                              |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent? | 13. Competition, none.                           |
| 14. Where are the manufactures consumed?                                                                                   | 14. Principally in the county.                   |

PHILETUS GLAS.

## DOCUMENT 14.—No. 41.

*Iron Foundry, Fayette County, Western Pennsylvania.*

| QUESTIONS.                                                                                                                                                    | ANSWERS.                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                     | 1. Fayette county, Pennsylvania.                   |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                          | 2. Iron foundry, with two air furnaces.            |
| 3. When established; and whether a joint stock concern?                                                                                                       | 3. 1813, joint stock, but now owned by individual. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                               | 4. Ground and buildings, \$4,000.                  |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                              | 5. Five thousand nine hundred dollars.             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                         | 9. Must be castings, 150 tons, \$50, \$7,50        |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                               | 10. Half ton domestic pig iron per day \$4,500.    |
| 16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?                                                     | 16. Market at home.                                |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                    | 17. No competition.                                |
| 18. Where are the manufactures consumed?                                                                                                                      | 18. In the United States.                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                    | 20. Cash.                                          |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                          | 22. From 7 cents down to 3 cents.                  |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                    | 23. None at all.                                   |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.? | 31. None, except I would turn storekeeper.         |

BRIDGEPORT, April 14, 1832.

WM. COCKE.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 3. Capital invested in ground and buildings?                                                                                               | 3. Fifteen hundred dollars.                                            |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                           | 4. Two thousand five hundred dollars.                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Five thousand dollars.                                              |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Eight hands for eight months of the year, at \$20 per month.       |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Ten hours.                                                         |
| 12. Whether the manufactories find a market at the manufactory; if not, how far they are sent to a market?                                 | 12. Sold at home and abroad at a distance of from ten to sixty miles.  |
| 14. Where are the manufactures consumed?                                                                                                   | 14. Answered by query twelve.                                          |
| 16. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                 | 16. Occasionally for cash, and at a credit of from four to six months. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sold by the ton at \$ 60; by retail at four cents per pound.       |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Not any thing less than the present rate.                          |
| 21. Average rate of wages?                                                                                                                 | 21. Answered in query tenth.                                           |

The above is believed to be a correct statement of affairs as connected with the Fulton air foundry, at Connellsville.

April 12, 1832.

ANDERSON, FRANCIS & Co.

## DOCUMENT 14.—No. 43.

*Engine Shop and Iron Foundry, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                         |
|-------------------------------------------------------------------------------------------------|--------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Fayette County, Brownsville, Pennsylvania.    |
| 2. Kind or description of the manufactory; and whether water, steam or other power?             | 2. Engine shop and iron foundry; steam power.    |
| 3. When established; and whether a joint stock concern?                                         | 3. 1832; individual stock.                       |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                 | 4. Eight thousand dollars.                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. Twenty thousand dollars for the present year. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory! Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. Must be at least 20,000 dollars.                  |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. Suppose twenty men.                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Two horses.                                      |
| 16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. At the factory.                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. No foreign competition.                          |
| 19. Whether any of the manufactures are exported to foreign countries; and, if so, where?                                                                                                                                                                                                                                                  | 19. No exports.                                      |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                                                                 | 20. For cash.                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. An entire prohibition.                           |
| 25. What has been the rate of your profits annually, for the last three years; and, if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. The factory being in its infancy, cannot answer. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Four thousand dollars.                           |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Unless wages were reduced, I would abandon it.   |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. This very uncertain.                             |

The above answers, as far as practicable, I submit.

Brownsville, April 17, 1832.

| QUESTIONS.                                                                                                                      | ANSWERS.                                        |
|---------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                       | 1. Fayette county, Pennsylvania.                |
| 2. Kind or description of the manufactory; whether water, steam, or other power?                                                | 2. Rolling mill and forge; steam power.         |
| 3. When established, and whether a joint stock concern?                                                                         | 3. 1832.                                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                 | 4. Sixty-two thousand dollars.                  |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                | 5. Twenty-five thousand dollars per year.       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 10. 1,200 tons pig iron, at \$36 per ton.       |
| 12. Number of men, women, and children employed, and average wages of each class?                                               | 12. Forty-five men and twenty boys.             |
| 13. How many hours a day employed, and what portion of the year?                                                                | 13. Twelve hours per day the whole year.        |
| 15. Number of horses, or other animals employed?                                                                                | 15. Thirty-six horses the whole year.           |
| 16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                       | 16. Cincinnati, Ohio, and Louisville, Kentucky. |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?      | 20. From 60 to 90 days' credit.                 |
| 40. Average rate of wages.                                                                                                      | 40. Twenty dollars per month.                   |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Fayette county, Pennsylvania.    |
| 2. Kind or description of the manufactory; whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Forge. Water power.              |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1798.                            |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Six thousand dollars.            |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. From 1824 to 1832 nine per cent. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. From 1826 to 1832, 75 tons bar iron at ninety-five dollars per ton.                      |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. 112 tons pig iron, at \$30; 250 loads charcoal, at \$6 per load.                        |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. Fourteen hands, at \$15 per month, 15 hours in the day and night, 7 months of the year. |
| 15. Number of horses and other animals employed?                                                                                                                                                                                                                                                                                           | 15. Six horses and two yoke of oxen.                                                        |
| 16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?                                                                                                                                                                                                                                  | 15. Two-thirds sold at home and one-third shipped to Pittsburgh, 45 miles.                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. Not any.                                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In Pennsylvania and Ohio.                                                               |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                                                                   | 19. Not any.                                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                                                                 | 20. Generally sold at four and six months' credit, for cash.                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. From 1826 to 1832 changeable from \$75 to \$125 per ton.                                |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Nine per cent.                                                                          |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. One half of it.                                                                         |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. One-fourth.                                                                             |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                                 | 40. Fifteen dollars per month.                                                              |

UNION FOUNDRY, two miles north of Union Town,  
Fayette county, Pennsylvania, 1832.

## DOCUMENT 14.—No. 46.

*Report of Jacob Murphey's Union Forge, near Connellsville, Fayette County, West Pennsylvania, April 11th, 1832.*

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                  | 1. Fayette county, State of Pennsylvania.                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                       | 2. Iron; a forge; water power.                                         |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                    | 3. \$1,800.                                                            |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                            | 4. Twenty thousand dollars.                                            |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                           | 5. Say \$7,000.                                                        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                                                                                                               | 6. From 1829 to 1832, 8 per cent.                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                      | 9. 1829 to 1832, 120 tons bar iron yearly, from \$80 to \$100 per ton. |
| 12. Number of men, women, and children employed. And average wages of each class?                                                                                                                                                                          | 12. \$18 per month; 10 hands.                                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. 6 horses; 2 yoke of oxen.                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                  | 16. Pittsburgh, 45 miles: one half sent off.                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Generally sold at 3 or 6 months, cash.                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. From \$10 to \$15 per ton, increase.                               |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                           | 27. Three-fourths of it.                                               |
| 40. Average rate of wages?                                                                                                                                                                                                                                 | 40. \$15.                                                              |

| QUESTIONS.                                                | ANSWERS.                         |
|-----------------------------------------------------------|----------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Fayette county, Pennsylvania. |

## DOCUMENT 14.—No. 47—Continued.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 2. Kind or description of the manufactory?                                                                                                 | 2. Blast furnace for smelting iron ore.                                                        |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Eighteen thousand dollars.                                                                  |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Domestic competition immediately, though materially influenced by foreign.                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. 500 tons pig metal; from 25 to 30 tons stoves and castings.                                 |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Suppose 35 horses and cattle.                                                               |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. From 50 to 60 men; part of which, say 20, with families that will average 4 to the family. |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 40 hours during the whole of the year.                                                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. From 10 to 45 miles.                                                                       |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the neighborhood and at Pittsburgh; principally the latter.                             |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Occasionally for cash, though generally at a credit of from 3 to 6 months.                 |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. From 26 to 36 dollars per ton.                                                             |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The present rate at least.                                                                 |
| 21. Average rate of wages?                                                                                                                 | 21. About \$15 per month.                                                                      |

CONNELLVILLE, April 12, 1832.

The above answers to the queries we believe to be correct in relation to Fayette Furnace.

J. &amp; G. ROGERS.

## DOCUMENT 14.—No. 48.

*Report of Fairview Furnace, by Jas. Victor, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                          |
|--------------------------------------------------------------------------------------|-----------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Fayette county, Pennsylvania.  |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Fairview furnace; water power. |
| 3. When established, and whether a joint stock concern?                              | 3. 1820.                          |

## DOCUMENT 14.—No. 48—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                             | 4. The amount \$10,000.                              |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                            | 5. Is \$9,500.                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                      | 9. Three hundred tons pig iron.                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. One hundred hands, or men and women, say 50 men. |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                           | 13. Sixteen hours per day.                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. Ten head of oxen.                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                  | 16. Sent to the city of Pittsburgh, Pa.              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. In the valley of the Mississippi.                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. For cash, at ninety days' credit,                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. It has increased since 1824.                     |

The above is a correct statement of Fairview Furnace, this 11th day April, 1832.

JOSEPH VICTOR.

## DOCUMENT 14.—No. 49.

*Report of J. Kennedy Duncan's, Fairchance Furnace, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                       | ANSWERS.                                                 |
|--------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                        | 1. Pennsylvania, Fayette county, George township.        |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?             | 2. Blast furnace; water power.                           |
| 3. When established; and whether a joint stock concern?                                          | 3. A. D. 1807.                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                  | 4. Suppose \$12,000.                                     |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages? | 5. \$5,000 cash for materials; \$4,000 payment of wages. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                          | 7. The cause of increase believed to be from tariff.     |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                      | 9. From 300 to 400 tons pig iron, with from 50 to 100 tons castings per year.                                                          |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                            | 10. Iron ore, from 1,000 to 1,200 tons; 100,000 bushels charcoal; 50 loads limestone.                                                  |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                           | 12. 50 men, as many women, and children in abundance.                                                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. 15 to 20 horses constant employment; two to three yoke oxen.                                                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                  | 16. Market at the establishment for the principal part; the remainder is sent to Pittsburgh.                                           |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Within this State, and the State of Ohio and western part of Virginia.                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Generally on a credit of from two to six months.                                                                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Increased since 1824.                                                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. Pig iron as high as \$62 per ton, and as low as 18 or \$20 per ton; castings as high as \$120 per ton, and as low as \$45 per ton. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                           | 27. \$2,000 agricultural, \$1,500 domestic productions.                                                                                |

The above is a correct statement, according to the knowledge that I have of such matters, at Fairchance Furnace, State and county abovenamed.

J. KENNEDY DUNCAN

April 11, 1832.

## DOCUMENT 14.—No. 50.

*Report of John Huston's Iron Furnace, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                  |
|--------------------------------------------------------------------------------------|-------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Fayette county, State of Pennsylvania. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Iron furnace; water power.             |
| 3. When established; and whether a joint stock concern?                              | 3. 1796.                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?      | 4. Ten thousand dollars.                  |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed?                                   | 6. From 1824 to 1832, 10 per cent.                                                                                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. Since 1824 to 1832, 50 tons castings and 250 tons pig iron per year; castings \$50 per ton, and pigs \$30 per ton.                    |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. 900 tons iron ore, cost \$3 per ton; and 600 loads coal, worth \$7 per load of 200 bushels.                                          |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. Thirty hands at \$15 per month.                                                                                                      |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Ten hours each day.                                                                                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Eighteen head of horses and four yoke of oxen.                                                                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Two-thirds of pig manufactured into iron at forges in the neighborhood, and castings generally sold in Pittsburgh, 45 miles distant. |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. No.                                                                                                                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Indiana, Ohio, &c. &c.                                                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. No, I think not.                                                                                                                     |
| 20. Whether the manufactory is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Generally sold at 4 or 6 months' credit, for cash.                                                                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. Changeable; from 1824 to this period it has varied from 6 to \$8 per ton.                                                            |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Ten per cent.                                                                                                                        |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Three-fourths of it.                                                                                                                 |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                                 | 40. \$15 per month.                                                                                                                      |

REDSTONE FURNACE, two miles east of Union Town, Pennsylvania, April 11, 1832.

JOHN HUSTON.

## DOCUMENT 14.—No. 51.

*Report of Dunbar Furnace, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                   | 1. Fayette county, Pennsylvania.                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                        | 2. Furnace; water.                                                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. 1816.                                                              |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                             | 4. 15,000 dollars.                                                    |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                             | 5. 4,000 dollars, (wages alone.)                                      |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                     | 7. Competition at home, and imported iron; cause decrease in profits. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. 250 tons in six months.                                            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. 600 tons ore, 79,000 bushels charcoal.                            |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                            | 12. 20 men, at 62½ cents per day.                                     |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. 12 hours per day; 6 months.                                       |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                             | 15. 12 horses.                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. Market 45 miles distant, freight \$2.                             |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. Pittsburgh.                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. As often on credit at 6 months, as for cash.                      |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Fluctuating.                                                      |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. In 1816, \$60 per ton; in 1822, \$35. now \$38.                   |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                  | 23. Nothing less than the present duty; should be more.               |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                | 26. Three-fourths; wages remainder.                                   |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                            | 27. Three-fourths the amount of the hands' wages.                     |

## DOCUMENT 14.—No. 51—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. To reduce would affect the iron master, because he does not make use of many imported articles. |

April 16, 1832.

WM. S. RANON.

*Manufactory of Blooms, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Pennsylvania, Fayette county.                                                                                                                                          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Manufactory of blooms; water power.                                                                                                                                             |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. October, 1831. It is a joint stock concern.                                                                                                                                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Twenty-five thousand dollars.                                                                                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Materials, &c. 4,000 dollars; cash required 5,000 dollars.                                                                                                                      |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Twelve per cent. on investment when fortunate.                                                                                                                                  |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. The bloom business is better now than formerly, owing to a difficulty of getting blooms from other sections of country to market, the canal breaking, &c., demand for iron, &c. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Average 15 to 20 per cent.                                                                                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. In six months, 200 tons blooms from pigs, worth 90 dollars per ton, and the iron of excellent reputation; 500 or 600 tons, annually, we will make.                              |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 900 tons pigs annually, worth \$31,500; coal stone, 10,000 bushels, worth \$400; charcoal 60,000 bushels, worth \$2,400.                                                       |
| 11. Cost in the United States of similar articles of manufactory imported from abroad, and from what countries?                                                                                                                                                                                      | 11. We never import our materials.                                                                                                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 52 men employed, receiving \$7,200 annually, being 1 dollar per day average.                                                                                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Ten hours, except when stopped by cold.                                                                                                                                        |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Hands receive same wages in this State, and generally in others. In England, at same business, about one quarter of a dollar per day.                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Twenty-five horses.                                                                                                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                                                                                                                                                                                                                    | 16. We send our blooms 45 miles to Pittsburgh.                                                                                                             |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. Some English iron has been bought, within a few weeks, at Pittsburgh for \$75 per ton, and cut up and rolled into small iron.                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In Pittsburgh, and through Ohio, Tennessee, Kentucky, &c.                                                                                              |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                                                                   | 19. None.                                                                                                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Our terms of credit are generally four to six months.                                                                                                  |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. The price of mettle has increased in one year five dollars.                                                                                            |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. From \$90 to \$85 dollars per ton.                                                                                                                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Nothing more than the present duty enforced.                                                                                                           |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Decidedly yes. Hoop iron has been imported as scraps, and put into nails, evading a duty of \$30 per ton, by calling short pieces of nail iron scraps. |
| 25. What has been the rate of your profits, annually, for the last three years?—and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. We have been too short a time in this business to reply.                                                                                               |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Five-eighths of mettle, two-eighths of fuel and wages, and one-eighth as profits.                                                                      |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. The workmen subsist 174 persons in their families, who are clothed and fed by this establishment.                                                      |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. This reduction would take away all our profits, and, of course, we must abandon our business.                                                          |

DOCUMENT 14.—No. 52—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                              | 30. In importing iron instead of drawing it from our mines.                                                                                                            |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                               | 31. We would fear to commence any business in future over which the Government had any control.                                                                        |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. No! In Pittsburgh, 300 miles from one sea-board, and 2,000 miles from another, any rise or fall in nails or iron in Philadelphia or New Orleans, we feel sensibly. |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                | 33. Thirty-four thousand dollars real capital.                                                                                                                         |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                   | 34. Any manufacturing business, when reduced to a profit of six per cent., would fail certainly in three years after such reduction.                                   |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                         | 36. The Government would profit by it, and the manufacturer would have a tariff in fact as well as name?                                                               |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                 | 37. If we were let alone, we could supply our own wants.                                                                                                               |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                            | 38. Manufacturing establishments increase about one-fourth more annually.                                                                                              |
| 39. Average profit of money or capital in the United States?                                                                                                                                | 39. Fifteen per cent. Running from 6 to 25 per cent.                                                                                                                   |
| 40. Average rate of wages?                                                                                                                                                                  | 40. 90 dollars per diem.                                                                                                                                               |

MILTENBERGER, BROWN & CO.

FRANKLIN IRON WORKS, May 7, 1832.

DOCUMENT 14.—No. 53.

*Iron Furnace, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                                                                  |
|--------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Pennsylvania, Huntingdon county, Morris's Cove, 12 miles distant from Williamsburg, &c.                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. A blast furnace, propelled by water power; one twee.                                                   |
| 3. When established; and whether a joint stock concern?                              | 3. In 1818; commenced making iron in the autumn of 1819; an individual concern.                           |
| 4. Capital invested in ground and buildings, and water power and in machinery?       | 4. \$55,000, embraced in about 12,000 acres of land, 45 or 50 buildings, and a very valuable water power. |

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                          | 5. Annual expense is about \$24,500 for wages, feed, &c., besides the implements, wagons, teams, &c., not embraced in the amount.                                                  |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. No borrowed capital; and the average rate of profit on the real capital and annual expenses invested has been about equivalent to 8 per cent., after making good insurance, &c. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                  | 7. There are fluctuations in the value of pig iron, but they are caused by the high or low price of bar iron.                                                                      |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                           | 8. The rate of interest is 6 per cent. by law, but capital otherwise employed in small concerns very often produces 40 or 50 per cent.                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                    | 9. About 1,300 tons metal annually, and about 50 tons castings, stoves, &c.; pig iron is far superior to any English iron, and is not surpassed by any in this country.            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                          | 10. No foreign productions used.                                                                                                                                                   |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                          | 11. Cannot ascertain what pig iron will cost here.                                                                                                                                 |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                         | 12. Average of 95 hands, with about 30 families; average rate of wages 20 dollars per month.                                                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                         | 13. Monthly hands from sunrise to sunset the whole year; furnace hands by turns, day and night; wood chopped per cord.                                                             |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                         | 14. Wages are not so high at any other manual labor in this country, except recently at some public works; they cannot be brought down.                                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                          | 15. 25 horses and 12 mules owned by the concern, besides about 10 horses hired to cart ore and pig iron.                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                | 16. Yes; the owner of this concern manufactures the metal into bloom at his own forges, 8 miles distant; then sent to Pittsburgh, 95 miles.                                        |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                | 17. Yes; some is brought into the interior.                                                                                                                                        |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                 | 18. The blooms are sent to Pittsburgh, and there rolled into boiler iron, and all other purposes, to suit the market which is there and down the Ohio.                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                 | 19. None from here, and not much after it is converted into malleable iron, unless some to the south.                                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                               | 20. It is not sold for cash here, nor indeed sold at all, until it is manufactured into malleable iron.                                                                            |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. It yearly increases, owing to the increased wages, high price of grain, difficulty in raising the ore, and getting timber off the rough rugged mountains: the rate per annum averages nearly two per cent.                           |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. In 1822 metal was as low as \$22 per ton, and it has increased in value since 1824 \$5, sometimes up to \$27, now \$25.                                                                                                              |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. I do not know what rate, as it is the duty on bar iron that alone can protect either furnaces or forges.                                                                                                                             |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Unacquainted with the modes of levying, and only know by information that frauds do exist.                                                                                                                                           |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. The rate of per cent. on all the capital, real, moveable, and personal, invested and employed, amounts to \$85,000 annually, yielding 10 per cent. during the last three years: there is not much retained, except for improvements. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. No raw material purchased; the portion of labor is almost 5-8ths, and the 3-8ths of capital, &c.                                                                                                                                     |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. About 4,000 bushels rye, 3,000 wheat, potatoes, corn, buck wheat, &c., in proportion, worth between 6 and \$9,000.                                                                                                                   |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                                                                                                                                                                                         |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. I would try to carry on, but presume would clear more by selling off personal stock, and quit it.                                                                                                                                    |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. My capital consists in lands that I could not sell; of course could not turn it to any other purpose.                                                                                                                                |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                                                                                                                                                                               | 31. Yes, many, if I could turn it into available capital; but I cannot.                                                                                                                                                                  |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. The circle extends to the nearest cheap communication, and my market is no nearer.                                                                                                                                                   |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. Entire amount of capital is worth \$5,000 dollars; none borrowed; if the business is ruined it is not worth \$15,000.                                                                                                                |

## DOCUMENT 14.—No. 53—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual the reduction should be?                                        | 34. It requires no reduction, for many works to make that: this is one of the best in the State. |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. Remote from seaports, I am unacquainted with the mode of levying and collecting, &c.         |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                              | 36. Not sufficiently acquainted with the nature of those frauds to give an opinion.              |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. Of pig metal there can be enough made for both continents when wages get lower.              |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                 | 38. Do not know.                                                                                 |
| 39. Average profit of money or capital within the United States?                                                                                                                                                 | 39. Money is, by law, worth 6 per cent., but really would be 7 or 7½.                            |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. \$17 per month common labor throughout the State, though higher at iron works.               |

For P. SHOENBERGER,  
JAS. KEMPF.

*Juniata Forge, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Huntingdon county, six miles distant from Huntingdon, on the Juniata river.                                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. A four fired forge, propelled by water power, and styled Juniata Forge.                                                                        |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1803; commenced making iron in 1804; an individual concern.                                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$40,000, embracing, in about 7,000 acres of land, 23 or 25 buildings.                                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Annual expense is about \$11,500 for wages, feed, &c., besides the implements, wagons, teams, &c., not included in this amount: no metal.      |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. No borrowed capital; and the average rate of profit on the real capital and annual expenses invested, has been about equivalent to 7 per cent. |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. There are fluctuations in the article.                                                                                                         |
| 8. Rates of profit on capital otherwise employed, in the same State and county?                                                                                                                                                                                                                      | 8. The rate of interest is six per cent. by law, but capital otherwise employed, in small concerns, very often produces from 30 to 60 per cent.   |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. About \$50 tons of blooms; bar iron made of Juniata blooms are far superior to any English iron, and not surpassed.                                                                                                                    |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. No foreign products used. *                                                                                                                                                                                                           |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. Cannot ascertain what blooms will cost delivered here.                                                                                                                                                                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. Average of about 45 hands with about 25 families; average rate of wages \$22 per month, exclusive of forgersmen, who work by the ton, at \$6.                                                                                         |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Monthly hands from sunrise to sunset the whole year; forgersmen by turns during day and night; wood choppers per cord, at 45 cents.                                                                                                   |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Wages are not so high at any other manual labor in this country, except recently at some public works: they cannot be brought down.                                                                                                   |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Eighteen horses owned by the concern.                                                                                                                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. The owner of this concern manufactures the blooms at his own rolling mill at Pittsburgh, distant 120 miles, and transports them by land and water carriage, at various prices.                                                        |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. None are brought into the interior.                                                                                                                                                                                                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Blooms are sent to Pittsburgh, and then rolled into boiler iron, and into all other kinds to suit the market on the Ohio river.                                                                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. None from here, and not much after it is converted into malleable iron, unless some to the south.                                                                                                                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. It is not sold for cash here, nor, indeed, sold at all, until it is manufactured at his own rolling mill in Pittsburgh, 120 miles distant, into different kinds of iron.                                                              |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. It yearly increases, owing to the increase of wages, high price of grain, getting timber off the rough mountains; the rate per annum averages nearly — per cent.                                                                      |
| 22. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 22. Unacquainted with the mode of levying, and only know by information that frauds do exist.                                                                                                                                             |
| 23. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 23. The rate per cent. on all the capital, real, moveable, and personal, invested and employed, amounts to \$57,000 annually, yielding four per cent. during the three last years: there is not so much retained except for improvements. |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. No raw materials purchased; the portion of labor is —, and — of capital, &c.                                                 |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. About 2,100 bushels rye and corn, 1,500 bushels wheat, potatoes, buckwheat, &c., in proportion, worth between 2 and \$3,000. |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. Do not know.                                                                                                                 |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Would try to carry on, but presume would clear more by selling off personal stock, and quit business.                        |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. The capital consists in lands that I could not sell: of course could not turn it to any other purpose.                       |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Yes, many, if I could turn it into available capital; but it cannot be, it won't sell.                                       |
| 32. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 32. Entire amount of capital is worth 57,000 dollars; none borrowed: if the business is ruined it is not worth \$10,000.         |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                               | 33. It requires no reduction, for the works do not yield six per cent. on the capital invested.                                  |
| 34. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                        | 34. Remote from seaports, I am unacquainted with the mode of levying and collecting, &c.                                         |
| 35. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                     | 35. Not sufficiently acquainted with the rate of those frauds to give an opinion.                                                |
| 36. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                        | 36. Do not know.                                                                                                                 |

For PETER SHOENBERGER,  
J. STEINMAN.

DOCUMENT 14—No. 54.

*Dorsey & Higgins, Barree Forge, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p> <p>2. Kind or description of the manufactory; and whether water, steam, or other power?</p> <p>3. When established; and whether a joint stock concern?</p> <p>4. Capital invested in ground and buildings, and water power, and in machinery?</p> <p>5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?</p> <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?</p> <p>7. Cause of the increase, (or decrease, as the case may be,) of profit?</p> <p>8. Rates of profit on capital otherwise employed, in the same State and county?</p> <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p> <p>10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?</p> <p>12. Number of men, women and children, employed, and average wages of each class?</p> <p>13. How many hours a day employed; and what portion of the year?</p> <p>14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?</p> <p>15. Number of horses or other animals employed?</p> <p>16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?</p> <p>17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?</p> <p>18. Where are the manufactures consumed?</p> <p>19. Whether any of the manufactures are exported to foreign countries? and, if so, where?</p> <p>20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?</p> <p>21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory, and whether the increase has been in the materials or the labor, and at what rate?</p> | <p>1. Huntingdon county, Pennsylvania, nine miles from Huntingdon, on the Juniata.</p> <p>2. One forge, six fires; water power; and styled Barree Forge.</p> <p>3. Established in 1796; joint stock concern.</p> <p>4. \$25,000, with 8,956 acres of land; 32 buildings.</p> <p>5. The average amount of stock and cash for carrying on the works is about \$20,000.</p> <p>6. Annual rate, for the last three years, about five per cent. No part of the capital borrowed.</p> <p>7. Owing to the rise or fall of grain, labor, transportation, &amp;c. &amp;c.</p> <p>8. From 10 to 50 per cent.</p> <p>9. Average per year, since 1829, 245 tons blooms, and 233 tons bar iron. Average price for the three years, 1829, 1830, and 1831, about \$63 for blooms, and \$75 for bar iron, at the works.</p> <p>10. We work up 700 tons pig metal per annum, which cost at the forge \$26 per ton; and about 105,100 bushels charcoal, cost four cents per bushel.</p> <p>12. 50 men, average per month about \$21.</p> <p>13. 11 to 12 hours per day; average 50 hands throughout the year.</p> <p>14. From 12 to \$18 in this section of country.</p> <p>15. 35 horses, exclusive of those employed to haul iron and blooms to market.</p> <p>16. Sent to Pittsburgh market, distance 116 miles.</p> <p>17. No foreign iron or blooms come to the Pittsburgh market.</p> <p>18. In Pittsburgh and the Western country.</p> <p>19. None exported from here.</p> <p>20. No sales for cash; usual credit three to six months.</p> <p>21. Cost has increased, owing to the advance in price of grain, labor, and the difficulty of getting timber for coal, &amp;c.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                        | 22. For three years, ending April, 1832, average price at the works about \$63 for blooms, and \$75 per ton for bar iron.                                                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                  | 23. The present rate of duties are barely sufficient to keep up, or to enter into competition in the home market.                                                             |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                            | 24. Are unacquainted with the levying and collecting duties.                                                                                                                  |
| 25. What has been the rate of your profits, annually, for the last three years? and, if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. About five per cent. on the capital, real and personal, \$45,000 employed.                                                                                                |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                            | 27. 2,000 bushels wheat; 4,800 bushels rye and corn; 500 bushels potatoes; 3,000 lbs. beef; 18,000 lbs. bacon; hay, straw, butter, cheese, &c. &c.                            |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                        | 28. Do not know.                                                                                                                                                              |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                     | 29. We would abandon the business, for to go on would be certain ruin.                                                                                                        |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                              | 30. We would have no capital; stop the works, and our personal property could not be sold for any price; and the real estate consists of lands valuable only for coal timber. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                               | 31. The farmers, manufacturers, and other tradesmen, can live by mutual dependence. Destruction of the one is ruin to all.                                                    |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                 | 32. We find a market for our iron down the Ohio river, and in Pittsburgh.                                                                                                     |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                                | 33. Whole amount of capital \$45,000; none borrowed.                                                                                                                          |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                                                                                                   | 34. The present rate of duties we do not realize 6 per cent. on the real capital invested.                                                                                    |

BARNES FORGE, May 4, 1832.

DORSEY &amp; HIGGINS.

## DOCUMENT 14.—No. 55.

*Iron Forges, Huntingdon County, West Pennsylvania.*

## QUESTIONS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established; and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power, and in machinery?
5. Average amount in materials, and in cash for the purchase of materials and payment of wages?
6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?
7. Cause of the increase (or decrease, as the case may be,) of profit?
8. Rates of profit on capital otherwise employed in the same State and county?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?
11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?
12. Number of men, women, and children employed, and average wages of each class?
13. How many hours a day employed; and what portion of the year?
14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?
15. Number of horses or other animals employed?
16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?
17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?
18. Where are the manufactures consumed?
19. Whether any of the manufactures are exported to foreign countries? and if so, where?

## ANSWERS.

1. Pennsylvania, Huntingdon county, 14 miles from Huntingdon, on Spruce creek.
2. 3 forges; in the whole 7 fires; water power, and styled Colerain Forges.
3. 2 of the forges in 1810 or 1811; the other in 1813 or 1814. A joint stock concern. The present company became owners by purchase in 1828.
4. \$30,000, with about 5,000 acres land; 25 buildings.
5. The average amount of stock and cash for carrying on the works is about 25,000.
6. None borrowed. The profit less than 6 per cent. since 1828.
7. Owing to the rise or fall of transportation, grain, labor, &c., &c.
8. From 20 to 50 per cent.
9. All bloom iron average per year, since 1828, 830 tons 12 cwt.; average price the 4 years 1828, 1829, 1830, and the year ending 1832, about \$63 at the works.
10. Pig iron, when delivered at the forges, is worth \$25 50 per ton; it takes 1½ ton to make a ton of blooms, and takes 225 bushels coal, at 4 cents per bushel, to make a ton blooms.
11. No foreign blooms brought here.
12. 60 men, average per month, about \$20.
13. About 10 to 12 hours; it will average 60 hands the year all through.
14. From \$14 to \$16 in this section of country.
15. 40 horses, exclusive of those employed to haul blooms to market.
16. Sent to the Pittsburgh market; distance 118 miles.
17. Foreign blooms do not come to the Pittsburgh market.
18. In Pittsburgh and the western country.
19. None from here.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. It is manufactured at our own rolling mill in Pittsburgh, and there sold.                                                                                                                          |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. It has increased owing to the advance in price of horse-feed, labor, and the difficulty of getting timber, and the great distance to haul coal.                                                    |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. For four years, ending April, 1832; average price at the works about \$63.                                                                                                                         |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Forges alone would sink money by making blooms, to sell them at less than \$60 per ton.                                                                                                            |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Dont know any thing about levying and collecting duties.                                                                                                                                           |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. About 5 per cent. on the capital, real and personal. \$55,000 employed.                                                                                                                            |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 2,000 bushels wheat; 5,000 bushels rye and corn; 400 bushels potatoes; 8,000 lbs. beef; 16,000 lbs. bacon; besides cheese, flannels, linens, &c., &c.                                              |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Dont know.                                                                                                                                                                                         |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                        | 29. Unconnected with a furnace and rolling mill, we would stop.                                                                                                                                        |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. In that case we would have no capital, for, if the works were stopped, the personal property could not be sold for any thing, and the real estate consists of lands valuable only for coal timber. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                                                                                                | 31. Yes; if we could sell at any price our property.                                                                                                                                                   |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. Our iron finds a market down the Ohio river, and there meets foreign iron.                                                                                                                         |
| 33. Amount of capital; and what portion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                                  | 33. Whole capital \$55,000; if they were stopped and put to sale, \$8,000 could not be realized.                                                                                                       |

## DOCUMENT 14.—No. 55—Continued.

| QUESTIONS.                                                                                                                                                                | ANSWERS.                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be? | 34. We dont now realize 6 per cent. on the real capital. |

SHORB, STEWART &amp; Co.

## DOCUMENT 14.—No. 56.

*Iron Manufactory, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Huntingdon county, about 16 miles from Huntingdon.                                                         |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. A blast furnace, called Huntingdon Furnace, propelled by water power, 1 tweer.                                           |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1796; a joint stock concern.                                                                                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$45,000 invested in 15,000 acres of land and 50 or 60 buildings, with water power, &c.                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. The annual amount of expenditure for those objects exceeds \$25,000.                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About 9 per cent. on capital not borrowed.                                                                               |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. The increase or decrease of profit is caused by the rise or fall in the price of bar iron.                               |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Too variable to be estimated.                                                                                            |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Manufactured, annually, about 1,200 tons pig iron, and a few tons of castings. Pig iron worth from \$22 to \$25 per ton. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 2,000 loads charcoal worth \$10,000; 3,000 tons ore worth \$5,000. No foreign products used.                            |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Cannot say.                                                                                                             |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. About 60 men employed, having about 20 families. Average wages per month about \$22. Women and children seldom employed.                                                       |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                           | <i>Note.</i> —That in the estimate of the value of coal and ore, stated in answer No. 10, the labor of making, digging, and hauling is included.                                   |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 13. Hands hired by the month, from sunrise to sunset, during the year. Furnace hands by turns, night and day, during the blast. Wood-choppers by the cord; colliers by the load.   |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 14. Wages for common labor, in this section of country, are 25 per cent. lower than those mentioned in answer 12.                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 15. About 50 horses employed.                                                                                                                                                      |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 16. The pig iron made here is sold on the bank.                                                                                                                                    |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 17. No foreign competition in this market.                                                                                                                                         |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 18. The pig iron is manufactured into blooms in the vicinity of the furnace, and sent to Pittsburgh, rolled into bar and all other descriptions of iron, and consumed in the west. |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 19. None.                                                                                                                                                                          |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or labor, and at what rate?                                                                                     | 20. Pig iron is sold at a credit of 2 to 4 months, and is also bartered for blooms.                                                                                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 21. There has been a small increase of cost, both in materials and in labor. Cannot say at what rate per annum.                                                                    |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 22. From \$22 to \$25.                                                                                                                                                             |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 23. That under the present tariff of duties is scarcely sufficient.                                                                                                                |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 24. Cannot say.                                                                                                                                                                    |
|                                                                                                                                                                                                                                                                                                                                            | 25. About 8 per cent. The dividends have been inconsiderable. Most of the income is expended in improvements.                                                                      |

## DOCUMENT 14.—No. 56—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                       | 27. About 2,000 bush. wheat; 7,000 bushels rye, corn, and oats; together with buck-wheat, potatoes, 10,000 lbs. beef, and 20,000 lbs. pork, of the value of 7 to \$9,000. |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                   | 28. Not able to make any estimate.                                                                                                                                        |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Such a reduction would, we apprehend, reduce our article at least 25 per cent, which would, of course, oblige us to stop.                                             |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                         | 30. A large proportion of our capital is in lands, which are of little value, except for our present manufacturing purposes.                                              |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                            | 31. We would be without capital. See answer 30.                                                                                                                           |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                              | 34. A very slight reduction indeed, as will appear by answer 25.                                                                                                          |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                            | 37. If full confidence were felt in the permanency of protective duties, the production would exceed the consumption.                                                     |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                       | 38. Cannot say.                                                                                                                                                           |
| 40. Average rate of wages?                                                                                                                                                                                                                                             | 40. Wages for common labor about \$16.                                                                                                                                    |

LYON, FOSTER &amp; Co.

## DOCUMENT 14.—No. 57.

*Iron Furnace, Huntingdon County, Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                      |
|--------------------------------------------------------------------------------------|---------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Springfield furnace is in Huntingdon county, Pennsylvania. |
| 2. Kind or description of the manufactory, and whether water, steam, or other power? | 2. Manufacture principally pig mettle; drawn by water power.  |
| 3. When established, and whether a joint stock concern?                              | 3. Established in 1815: a company concern.                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?      | 4. Original capital invested, \$50,000.                       |

## DOCUMENT 14.—No. 57.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                         | 5. From 18 to 22,000 dollars per year latterly; formerly more.                                                                                                   |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                   | 9. From 10 to 1,900 tons pig mettle.                                                                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. From 80 to 100 men employed; about 50 of whom have families.                                                                                                 |
| 13. How many hours a day employed, and what portion of the year.                                                                                                                                                                                                        | 13. They labor from sunrise to sunset, with some few exceptions, where it is necessary to be up all night.                                                       |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. 35 horses, 6 mules, and 2 yoke of oxen.                                                                                                                      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. The mettle is worked into bar iron in our own neighborhood, and then transported to Pittsburgh.                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. In 1815 and 1816 pig mettle sold at 40 dollars per ton; has been greatly reducing in price; for the last three years it has been sold at 24 dollars per ton. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We would be compelled to abandon it.                                                                                                                         |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. We know of many kind of business that would yield better profits in proportion to the capital employed, at the present rate of duties on foreign iron.       |

SAMUEL BOYER.

## DOCUMENT 14.—No. 58.

*Iron Manufactory, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                                                     |
|-------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Huntingdon county, Pennsylvania.                                          |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?            | 2. 1 forge, water power, Spruce creek.                                       |
| 3. When established, and whether a joint stock concern?                                         | 3. In the fall of 1826 in company, but now the subscriber's private concern. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                 | 4. About six thousand dollars; 60 acres of land and 6 houses.                |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. About 6,500 dollars.                                                      |

## DOCUMENT 14.—No. 58—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                       | 7. The change in the price of grain and meat; also in carriage to market.                              |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                              | 8. Not prepared to state.                                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. About 160 tons blooms and 20 tons bar iron.                                                         |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                             | 10. Pig mettle, worth about 25 dollars a furnace bank; 300 tons used a year.                           |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                             | 11. Do not know.                                                                                       |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                           | 12. Average twenty-two men. Children not employed; choppers and colliers included, and their families. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. Mostly all the day, and part of the night.                                                         |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                            | 14. Do not know.                                                                                       |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                             | 15. Fifty horses or other animals equal in power for draught.                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. Pittsburgh, 117 miles distance; part by canal.                                                     |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                  | 17. In the east and west it is said they do, to wit, Philadelphia and Ohio State.                      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the Western and Eastern States.                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                    | 19. None, that is, to my knowledge.                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. By the manufacturer, at a credit from 120 to 90 days, payable in money.                            |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Both a little.                                                                                     |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. From eighty-five to eighty dollars at market.                                                      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                  | 23. Do not know.                                                                                       |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                            | 24. Cannot say.                                                                                        |

## DOCUMENT 14.—No. 59.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 25. What has been the rate of your profits annually for the last three years; and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and, therefore, not divided out annually? | 25. Cannot state, as I am lately engaged in the business.                                  |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                                           |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Must abandon the business from a full sense of necessity; otherwise sink.              |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. I would be left without much.                                                          |
| 32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                               | 32. Situate 28 miles from Bellefonte, 16 from Huntingdon, and 117 from Pittsburgh.         |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                                                                                                | 34. Not any in my mind.                                                                    |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                                                                                                | 37. It is believed much more might be made than what is.                                   |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                                                                                           | 38. Do not know.                                                                           |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                                                                                               | 39. Do not know.                                                                           |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                                 | 40. 18 dollars per month for common business, find themselves; other work by piece or ton. |

N. B.—I would answer the questions more fully, were it not that I feel assured that they will be answered by older men in the business.

C. WIGTON.

## DOCUMENT 14.—No. 59.

*Etna Iron Works, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                | ANSWERS.                                                                        |
|-----------------------------------------------------------|---------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Pennsylvania, Huntingdon county, 14 miles from Huntingdon, on Juniata river. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Two forges, in the whole five fires, one blast furnace, one ore washing machine, one grist mill, and two saw mills; all water power, styled <i>Ætna</i> works.                                                                                                      |
| 3. When established; and whether a joint-stock concern?                                                                                                                                                                                                                                              | 3. Commenced making iron in 1808; an individual concern.                                                                                                                                                                                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$70,000, embracing about 10,000 acres land and improvements, 40 to 50 houses.                                                                                                                                                                                      |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages.                                                                                                                                                                                                     | 5. Annual expense is about \$35,000 for wages, feed, &c., besides the implements, wagons, teams, &c. not embraced in the amount.                                                                                                                                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. None borrowed; the profit less than six per cent. since 1828.                                                                                                                                                                                                       |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. The decrease is owing to rise of pig metal, increase of wages, and low price of iron, &c.                                                                                                                                                                           |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From 20 to 50 per cent.                                                                                                                                                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About 600 tons pig metal annually, 50 tons castings, stoves, &c.; about 500 tons blooms annually, which are rolled into all kinds of iron, at my rolling mill, Pittsburgh. The above iron is of a very superior quality, and not surpassed by any in the U. States. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. No foreign products consumed.                                                                                                                                                                                                                                      |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. No similar articles brought here; and am not certain as to the prices.                                                                                                                                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 150 hands employed; about 40 families, average rate of wages \$22, exclusive of foremen and founders, who work by the ton; \$7 for foremen.                                                                                                                        |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Hands by the month from sunrise to sunset, the whole year; foremen by turns during day and night; furnace hands same; wood choppers per cord 40 cents.                                                                                                             |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Wages are not as high at any other business, except at some public work.                                                                                                                                                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Fifty horses for teams, farming, &c.                                                                                                                                                                                                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. No market here; but are sent to my rolling mill at Pittsburgh, which is 110 miles distant from this place, and transported thence by land and water carriage at various prices.                                                                                    |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. There are no foreign blooms brought to Pittsburgh.                                                                                                                                                                                                                 |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Pittsburgh and western country.                                                                                                                                                                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None from this place.                                                                                                                                                                                                                                              |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                                                                 | 20. Not sold for cash here, and not sold until manufactured at my rolling mill, Pittsburgh, in different kinds of iron to suit the market.                                                         |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. It increases yearly, owing to the increased wages, high price of grain, difficulty in raising ore and coal, and the great distance to haul from off the rough mountains.                       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. The average price for blooms is about \$63 per ton, and pig metal \$25.                                                                                                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Forges would sink money to sell blooms for less than \$60 per ton.                                                                                                                             |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Not acquainted about levying and collecting duties.                                                                                                                                            |
| 25. What has been the rate of your profits, annually, for the last three years; and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. The rate per cent. on the capital, real, moveable, and personal, invested, \$85,000, annually, yielding four per cent for the last three years; not so much retained, except for improvements. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. No raw materials purchased.                                                                                                                                                                    |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 3,000 bushels wheat, 8,000 bushels rye and corn, 1,000 bushels potatoes, 10,000 lbs. beef, 20,000 lbs. bacon, &c.                                                                              |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. I cannot tell.                                                                                                                                                                                 |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. I would quit the iron business should the fall of iron correspond with the reduction of 12½ per cent.                                                                                          |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. My capital consists in lands, which I could not sell, unless making a great sacrifice.                                                                                                         |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Yes; if I could sell my property without a sacrifice.                                                                                                                                          |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. The circle extends to the nearest cheap communication; my market is no nearer.                                                                                                                 |

## DOCUMENT 14.—No. 59—Continued.

| QUESTIONS.                                                                                                                                                                                                           | ANSWERS.                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                         | 33. Entire amount of capital \$85,000; none borrowed. If business is ruined it is not worth \$20,000. |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                          | 34. It requires no reduction, as the works do not yield six per cent. on the capital invested.        |
| 35. If the minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. I cannot say.                                                                                     |

H. S. SPANG.

## DOCUMENT 14.—No. 60.

*Iron Furnace, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Huntingdon, Pennsylvania.                                                                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Blast furnace; water power.                                                                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1831.                                                                                      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Ten thousand dollars.                                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Just beginning.                                                                               |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Just beginning.                                                                               |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. It may arise from local causes, say the cost of raw materials, price of provision, labor, &c. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Uncertain, but not great on any.                                                              |
| 9. Amount of articles annually manufactured, since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                               | 9. Expect to make 400 tons pig iron and castings; say 350 pig iron and 50 castings.              |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Value of raw material about \$3,000, domestic.                                               |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Cannot say.                                                                                  |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>12. Number of men, women, and children employed, and average wages of each class?</p> <p>13. How many hours a day employed; and what portion of the year?</p> <p>14. Rate of wages of similar classes otherwise employed in the same State and country, in other States, and in foreign countries?</p> <p>15. Number of horses or other animals employed?</p> <p>16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?</p> <p>17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?</p> <p>18. Where are the manufactures consumed?</p> <p>19. Whether any of the manufactures are exported to foreign countries; and if so, where?</p> <p>20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?</p> <p>21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p> <p>22. The prices at which the manufacture has been sold by the manufacturer since the establishment?</p> <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p> <p>25. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p> <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p> <p>28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?</p> <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p> | <p>12. 30 men, average wages \$17 per month, and find themselves.</p> <p>13. 12 hours, employed 10 months.</p> <p>14. Cannot say with any certainty.</p> <p>15. Ten horses and four oxen.</p> <p>16. Perhaps a home market; if not 330 miles to sea port, by canal.</p> <p>17. We expect to find heavy competition in the sea port, but none at home.</p> <p>18. In the United States.</p> <p>19. None exported.</p> <p>20. Various ways, bartered for provisions, bar iron, &amp;c.</p> <p>21. Unable to say.</p> <p>22. Now offered \$27 per ton.</p> <p>23. We expect to find it now a living business by industry and care.</p> <p>24. As to pig iron, we think there is no change necessary.</p> <p>25. We are unable to say.</p> <p>27. Whole amount of domestic productions will be about eight to ten thousand.</p> <p>28. Do not know, but it is very large.</p> <p>29. It would cause us to abandon our business (and our country.)</p> <p>30. We hope we have not got to learn that.</p> |

DOCUMENT 14.—No. 60—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                    | 31. We do not know of any; we could not grow cotton on our mountains, and our country has already a large surplus of bread stuffs, without a foreign market. |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                     | 33. Perhaps we must employ \$8,000, four to six to borrow.                                                                                                   |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                      | 34. It is certain we must get the business to greater perfection before it will bear any reductions and yield a compensation.                                |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. We certainly need all the present rate of duty affords.                                                                                                  |
| 36. What would be the operation of this change upon the frauds at present supposed to practised?                                                                                                                 | 36. We apprehend no fraud in the article of pig iron.                                                                                                        |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. The production cannot be equal to the consumption; when that time arrives, mechanical skill, long experience, and home competition will regulate it.     |
| 38. Extent of individual or household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                  | 38. The extent is very great: it has, perhaps, doubled itself since 1824.                                                                                    |
| 39. Average profit of money or capital in the United States?                                                                                                                                                     | 39. From three to six per cent.                                                                                                                              |
| 40. Average rate of wages?                                                                                                                                                                                       | Various, from \$10 to \$20, and found in boarding.                                                                                                           |

ROCKHILL FURNACE, April 23, 1832.

DIVEN & MORRISON, Owners.

This statement is taken hastily, but, from the best information I have of the business generally, consider it tolerably correct. We believe the present system of duties sufficient and barely so; we will know better in another year.

THOMAS N. DIVEN.

DOCUMENT 14.—No. 61—[ No. 1. ]

*Edward Bell's Mary Ann Forge, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                                   |
|--------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Antis township, Huntingdon county, on the Little Juniata river.         |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. A three fired forge; one hammer; water power, 20 feet fall.             |
| 3. When established; and whether a joint stock concern?                              | 3. Started in November, 1830. Individual concern.                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?      | 4. About \$13,200. About 2,000 acres of land belongs to the establishment. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$3,150 in pig iron, wood, cut grain, and other provisions.                                                                                                        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Profit not known, but not 3 per cent.; no capital borrowed; works not fairly under way yet, owing to scarcity of hands.                                            |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Rise in the price of labor, and fall in the price of iron, reduces the profit, and vice versa.                                                                     |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Very uncertain.                                                                                                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value, of each kind?                                                                                                                                                               | 9. Since commenced 142 tons blooms, worth \$86 at forge, best quality of iron; 25 tons bar iron, worth about \$90 per ton, of superior quality.                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. We ought to use 300 tons pig iron, worth about \$8,400. No foreign article used.                                                                                  |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Do not know.                                                                                                                                                      |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                   | 12. About 25 men at \$23 per month; about ten families, average five persons to each family.                                                                          |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Very uncertain; about 11 months in the year.                                                                                                                      |
| 14. Rate of wages of similar classes otherwise employed, in the same State and county, in other States, and in foreign countries?                                                                                                                                                                    | 14. \$18 per month; in other States and counties, not known.                                                                                                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 14 horses and two yoke of cattle.                                                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. No home market; sent 106 miles to Pittsburgh, Pennsylvania.                                                                                                       |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. Believe no foreign iron comes to that market.                                                                                                                     |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the States of Ohio; Kentucky, Indiana, &c.                                                                                                                     |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. Know of none.                                                                                                                                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                                                          | 20. Generally sold at a credit of from sixty days to six months, and sometimes one year; sometimes bacon, tobacco, muslin, and sugar, are taken in exchange for iron. |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                         | 21. The cost of the manufactured article, to the manufacturer, has increased for the last three years, owing to the scarcity of hands.                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. From 85 to \$95 per ton for blooms, at six months; and bar iron at 100 to \$120 per ton, subject to the same credit.                                              |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                  | 23. Do not know.                                                                                                                                                                                                                  |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                            | 24. Do not know.                                                                                                                                                                                                                  |
| 25. What has been the rate of your profits, annually, for the last three years? and, if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Do not know; as it is not a joint stock, we have not been able to ascertain what our profits are, if any, as we are not done with our improvements.                                                                           |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                                | Raw material, delivered at the forge, costs about half generally of the price of a ton of blooms in Pittsburgh; manufacturing, about \$12 50 per ton.                                                                             |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                            | 27. About 1,050 bushels of wheat, 1,560 bushels rye, 500 bushels corn and buckwheat, 200 bushels potatoes, 6,000 lbs. bacon, 3,000 lbs. beef, 3,100 lbs. butter, 1,000 dozen eggs and 250 lbs. cheese.                            |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                        | 28. I do not know.                                                                                                                                                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                     | 29. I cannot say what I would do. I know nothing about duties, nor what duty is now on iron.                                                                                                                                      |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                              | 30. I expect my capital would be all spent before I would agree to quit.                                                                                                                                                          |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                               | 31. I consider the profits now very small, and what a reduction to 12½ per cent. would reduce them I cannot say. Destroy the iron works, and I know of no business that would be good in this county, as the rest depend on them. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                 | 32. The circle is very small, as foreign salt, and I believe some iron, especially in sheets, come to the adjoining counties east and south of this.                                                                              |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                                | 33. No borrowed capital.                                                                                                                                                                                                          |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                                                                                                   | 34. I do not know.                                                                                                                                                                                                                |
| 35. If minimums should be abolished, and                                                                                                                                                                                                                                                                                                    | 35. Do not know.                                                                                                                                                                                                                  |

## DOCUMENT 14.—No. 61—[No. 1]—Continued.

| QUESTIONS.                                                                                                                                                              | ANSWERS.                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|
| the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? |                                              |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                     | 36. Do not know.                             |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                             | 37. Do not know.                             |
| 40. Average rate of wages?                                                                                                                                              | 40. To common laborers about \$16 per month. |

MARY ANN FORGE, *April 21, 1832.*EDWARD BELL, *Owner.*

## No. 2.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Antis township, Huntingdon county, on the Little Juniata river, below E. Bell's.                                                                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. A three fired forge; one hammer; water power.                                                                                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Started in June, 1829; joint stock concern.                                                                                                                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. About \$11,500; about 1,000 acres land belongs to the establishment.                                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About \$3,600 in pig metal, wood (out,) and grain, and other necessaries.                                                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Profit not exactly known, but not 6 per cent., owing to still making improvements, and accidents of fire and water; part borrowed, which does not more than pay the interest. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Rise in the price of labor and grain, and fall in the price of iron, reduces the profit.                                                                                      |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. No other capital employed.                                                                                                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Since commenced, 500 tons blooms, \$66 at forge, best quality of iron; 50 tons bar iron, worth about, at present, \$90 per ton, best quality of iron.                         |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. We ought to use 450 tons pig iron, worth \$10,800 at furnace. No foreign products used.                                                                                      |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Do not know.                                                                                                                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. 24 men at \$23 per month, averaged with forge-man's wages, \$6 per ton; about ten families, average six persons to each family.                                                                     |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                                                                                            | 13. Very uncertain; about 11 months in the year.                                                                                                                                                        |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                            | 14. About \$18 per month; in other States and countries not known.                                                                                                                                      |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                             | 15. 14 horses.                                                                                                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                   | 16. No home market; 110 miles to Pittsburgh, Pennsylvania.                                                                                                                                              |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                  | 17. Believe no foreign iron comes to that market.                                                                                                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                    | 18. In the States of Ohio, Kentucky, Indiana, &c.                                                                                                                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                   | 19. Know of none.                                                                                                                                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Generally sold at a credit of from sixty days to six months, and sometimes one year; sometimes bacon, tobacco, muslin, and sugar, are taken in exchange for iron.                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. The cost of the manufactured article, to the manufacturer, has increased for the last three years owing to the scarcity of hands.                                                                   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                        | 22. From 85 to \$95 per ton for blooms, at six months; bar iron at 100 to \$120, subject to the same credit.                                                                                            |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                  | 23. Do not know.                                                                                                                                                                                        |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                            | 24. Do not know.                                                                                                                                                                                        |
| 25. What has been the rate of your profits, annually, for the last three years? and, if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Do not know the profits exactly for the last three years; joint stock company; dividends all spent in paying interest and making improvements.                                                      |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                                | 26. Raw material for one ton blooms, delivered at the forge, costs \$50; manufacturing \$12 per ton.                                                                                                    |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                            | 27. About 1,050 bushels wheat, 1,560 bushels rye, 500 bushels of corn and buckwheat, 300 bushels potatoes, 6,000 lbs. bacon, 3,000 lbs. beef, 3,100 lbs. butter, 300 lbs. cheese, and 1,000 dozen eggs. |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. I do not know.                                                                                                                                     |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I cannot say what I would do. I know nothing or very little about duties.                                                                          |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Our capital is all invested in the works, or nearly so, and would be worth nothing except farming; and destroy one and you will destroy the other. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. There is not more than a living profit now; and I think a reduction to 12½ per cent. would affect all other business in this county.               |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. I have never made much inquiry as to this.                                                                                                         |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. Cannot tell exactly.                                                                                                                               |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                               | 34. I do not know.                                                                                                                                     |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                        | 35. I do not know.                                                                                                                                     |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                     | 36. Do not know.                                                                                                                                       |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. Do not know.                                                                                                                                       |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                            | 39. Ditto.                                                                                                                                             |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. To common laborers \$16 per month.                                                                                                                 |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Huntingdon county.                                                                                                                         |
| 2. Kind or description of the manufactory?                                                                                            | 2. Forge; water power.                                                                                                                                      |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Twenty thousand dollars.                                                                                                                                 |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Eighteen hundred dollars.                                                                                                                                |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. The cause of decrease of profit, the competition of domestic manufactures.                                                                               |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. About 250 tons blooms, and 50 tons bar iron per annum; value of the former \$65, and latter \$80 per ton.                                                |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. About 450 tons pig metal; value eleven thousand nine hundred dollars, delivered.                                                                         |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. Thirty-four laborers employed; number of families, eighteen. Average wages of each hand one hundred and eighty-one dollars per annum.                   |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Blooms and bar iron sent to Pittsburgh market, distance about one hundred and ten miles; carriage per ton \$27½.                                        |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Blooms and bar iron sold at a credit from 3 to 6 months.                                                                                                |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. The price of bar iron at one time was \$200; has since decreased to the present price, \$110 per ton, and blooms \$95 per ton, delivered in Pittsburgh. |

ROYER &amp; SCHMUCKER.

| QUESTIONS.                                                                                       | ANSWERS.                                                                    |
|--------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                        | 1. Pennsylvania, Huntingdon county, 13 miles from Huntingdon, Spruce Creek. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?             | 2. One forge, two fires; water power; called Elizabeth Forge.               |
| 3. When established; and whether a joint stock concern?                                          | 3. Built in 1827.                                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                  | 4. \$12,000, with about 500 acres of land; 12 buildings.                    |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages? | 5. 330 tons pig metal; as for w <sup>h</sup> hands, cannot say.             |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The profits not exceed 6 per cent.                                                                     |
| 7. Causes of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                             | 7. Owing to the rise of labor, grain, and transportation of iron.                                         |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Too variable to be estimated.                                                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About 220 tons blooms.                                                                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Pig iron, worth \$25 50 per ton at forge.                                                             |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Do not correctly know.                                                                                |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. 18 men, average about \$22 per month, and a portion of women and children.                            |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Laborers from sunrise to sunset, forgers by the ton, wood choppers by the cord, colliers by the load. |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. From 14 to \$15 in this section of the country.                                                       |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 12 horses.                                                                                            |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Sent to Pittsburgh market, distance 115 miles.                                                        |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. No foreign competition in this place, but meet one down the Ohio.                                     |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the western country.                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                                                                                                                                                                             | 19. None.                                                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Blooms are sold in Pittsburgh on a credit.                                                            |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                          | 21. It varies, but there has been a small increase both in labor and grain.                               |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. For 3 years average price of blooms \$62.                                                             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                           | 23. The present tariff of duties is scarcely sufficient.                                                  |

DOCUMENT 14.—No. 63—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Could not say.                                                                                   |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Nearly 7 per cent. for the last three years; the greatest part expended in improvements.         |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Cannot say.                                                                                      |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 400 bushels wheat, 1,100 bushels rye and corn together, without buckwheat, potatoes, beef, pork. |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                                                     |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Stop as soon as business could get closed.                                                       |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Purchase bank stock.                                                                             |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 1½ per cent.?                                                                                                                                                                               | 31. Yes; would rather undertake to till the ground.                                                  |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. No regular sales nearer than Pittsburgh.                                                         |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. \$15,000; none borrowed.                                                                         |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent, and how gradual the reduction shall be?                                                                                                                                                                    | 34. It must be carefully attended to give 6 per cent.                                                |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                                                                                           | 38. Increased considerably.                                                                          |

ROBERT MOORE.

## DOCUMENT 14.—No. 64.

*Iron Works, Huntington County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Huntington county, 22 miles from Huntington, on the Juniata river.                                                                                                                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. 2 forges, 7 fires, water power, and called Tyrone forges, with a slitting mill and nail factory.                                                                                                                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Built at different times from 1806 to 1813. A joint stock concern: the present owners purchased in 1831.                                                                                                            |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$60,000, with about 10,000 acres of land; from 45 to 50 buildings, water power; and in joint cost of building and land amounting to better than \$100,000.                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. We do not correctly know, but corresponding with other works in this country.                                                                                                                                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The profits vary from 3 to 15 per cent.; the last three years about 4½ per cent.                                                                                                                                    |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. Transportation, grain and labor.                                                                                                                                                                                    |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Too variable to be estimated.                                                                                                                                                                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Do not correctly know; for the last 3 years about 350 tons of blooms and 300 tons bar iron, together with nail and spike work, nails, &c. Best Juniata bloom worth about \$62 per ton, bar iron \$75 at the forges. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing, between foreign products and domestic products?                                                                                                                                                                     | 10. Pig iron at forges worth \$25 per ton; takes 1½ tons for 1 ton of iron, 22½ bushels coal, worth 3½ per bushel.                                                                                                     |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Do not correctly know.                                                                                                                                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 70 men, (no women and children employed,) average about \$23 per month.                                                                                                                                            |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Hand by the month, from sunrise to sunset; forge men by the ton, wood choppers by the cord; colliers by the load.                                                                                                  |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. From 14 to \$16 per month in the country.                                                                                                                                                                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 40 horses and some oxen.                                                                                                                                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Sent nearly all to Pittsburgh, 116 miles.                                                                                                                                                                          |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                            | 17. No foreign competition in this place, but meets our iron down the Ohio.                                                                                                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the western country.                                                                                                                                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None.                                                                                                                                                                                                              |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Bar iron is sold at Pittsburgh on a credit, and the bloom we roll in various kinds of iron at our own rolling mill at Pittsburgh. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. It varies, but there has been a small increase both in labor and grain.                                                           |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. For three years average price of bloom \$62, bar iron \$75 at the works.                                                          |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present tariff of duties is scarcely sufficient.                                                                              |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Cannot say.                                                                                                                       |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. About 7 per cent. for the last 3 years: nearly all expended in improvements.                                                      |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. The only raw material is pig, what we take from our own furnaces; the balance is paid for labor and grain.                        |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 2,000 bushels wheat, 6,000 rye and corn, together with oats, buckwheat, and potatoes, beef, pork, &c.                             |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                                                                                      |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Do not know, but would likely carry on until our stock is sunk.                                                                   |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. We would have none to employ, as all our capital would not be worth any thing.                                                    |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Yes, plenty, But of no use to us.                                                                                                 |
| 32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them? and what is the extent of that circle?                                                                                                                                               | 32. No, our iron has to go either east or west, where it meets foreign competition: very little used in the neighborhood.             |

| QUESTIONS.                                                                                                                                                                | ANSWERS.                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                              | 33. \$85,000. No borrowed capital, only what becomes due by yearly payments on the purchase of the works. |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be? | 34. Few works now yield 6 per cent. on all capital invested.                                              |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                               | 37. Do not know, but there might be manufactured to any amount wanted.                                    |

LYON, FOSTER &amp; CO.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Huntington county, 16 miles from Huntington, on Spruce creek.                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. One forge, 2 fires. Water power. Called Elizabeth forge.                                                                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Built in 1828. A joint stock concern. Part of the present owners purchased in 1831.                                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$10,000, with about 500 acres of land, 10 buildings.                                                                      |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Do not correctly know, as the pigs are all from our own furnace.                                                           |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The profits less than 6 per cent.                                                                                          |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                               | 7. Owing to the rise of labor, grain, and the transportation of iron.                                                         |
| 8. Rates of profit on capital otherwise employed in the same State or county?                                                                                                                                                                                                                        | 8. Too variable to be estimated.                                                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About 100 tons blooms and 60 tons bar iron. Best Juniata blooms is worth \$62 per ton; bar iron \$75 per ton at the works. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Pig iron is worth \$25 per ton at the forge.                                                                              |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Do not correctly know.                                                                                                    |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                                                       | 12. 15 men, average about \$22 per ton.                                                                                                                    |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                         | 13. Laborers from sunrise to sunset; forgers by ton; wood choppers by the cord; colliers by the load.                                                      |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                         | 14. From 14 to \$16 in this section of the country.                                                                                                        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                          | 15. Twelve horses.                                                                                                                                         |
| 16. Whether the manufacturers find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                               | 16. Sent to Pittsburgh market; distance 120 miles.                                                                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                               | 17. No foreign competition in this place, but meets one down the Ohio.                                                                                     |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                 | 18. In the western country.                                                                                                                                |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                 | 19. None.                                                                                                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                               | 20. Bar iron is sold in Pittsburgh on a credit; blooms are rolled into various kinds of iron in Pittsburgh, at our own rolling mill, and sold on a credit. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                               | 21. It varies, but there has been a small increase both in labor and grain.                                                                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. For 3 years average price of bloom \$62, bar iron \$73 at the works.                                                                                   |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                               | 23. The present tariff of duties is scarcely sufficient.                                                                                                   |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                         | 24. Cannot say.                                                                                                                                            |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. About 7 per cent. for the last 3 years nearly all expended in improvements.                                                                            |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                             | 26. The only raw materials pig, is what we take from our own furnaces: the balance is paid for labor and grain.                                            |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                         | 27. 300 bushels wheat, 1,200 bushels rye and corn, together with oats, buckwheat, potatoes, beef, pork, &c.                                                |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                     | 28. Do not know.                                                                                                                                           |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Do not know, but would likely carry on until our stock was sunk.                                                      |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. We would have none to employ, as our capital would not be worth any thing.                                            |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per centum?                                                                                                          | 31. Yes, plenty, but of no use to us.                                                                                     |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. No, our iron has either to go east or west, where it meets foreign competition: very little used in the neighborhood. |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. \$16,000. No borrowed capital, only what becomes due by yearly payments on the purchase of the works.                 |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                               | 34. Few works now yield 6 per cent. on all capital invested.                                                              |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. Do not know, but there might be manufactured to any amount wanted.                                                    |

LYON, FOSTER &amp; CO.

## DOCUMENT 14.—No. 66.

*Bald Eagle Furnace, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                                                                                |
|-------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Pennsylvania, Huntingdon county, about 30 miles from Blair's gap, on Bald Eagle creek.               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?            | 2. One blast furnace, called Bald Eagle Furnace; propelled by water power; one tweer.                   |
| 3. When established, and whether a joint stock concern?                                         | 3. In 1825; commenced making iron in 1826; a joint stock concern; the present owners purchased in 1831. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                 | 4. \$25,000 invested in 8,000 acres of land, 35 or 40 buildings, machinery, and water power.            |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. The annual expenditure amounts to upwards of \$28,000.                                               |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. About 10 per cent.; no borrowed capital; the reason of being so high a per cent. is, coal is very convenient, as it is a new establishment, and the land bought at low rates. |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                               | 7. Various causes—the immediate demand for labor, prices of grain, and the fluctuation of the price of iron.<br>8. Too variable to be estimated.                                 |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 9. 1,200 tons pig iron and 20 tons of forge castings, considered the best of Juniata pig iron, worth from 22 to \$24 per ton.                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 10. 3,000 tons ore, worth \$6,000; 2,200 loads charcoal, worth \$8,800; no foreign products used.                                                                                |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 11. Cannot say.                                                                                                                                                                  |
| 11. Cost in the United States of similar articles of manufacture imported abroad, and from what countries?                                                                                                                                                                                           | 12. Average 70 men, 30 families; no women or children employed; average wages \$23 per month.                                                                                    |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 13. Laborers from sunrise to sunset; furnace hands by turns; wood choppers per cord; colliers per load; miners per ton.                                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 14. From 14 to \$16 per month: do not know correctly in other States and foreign countries.                                                                                      |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 15. Average 60 horses.                                                                                                                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 16. Part manufactured by our own forges, part sold or exchanged on bank for blooms.                                                                                              |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 17. No; we are so far from sea-shore.                                                                                                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 18. The pig iron is manufactured into blooms and bar iron, and sold in the west.<br>19. None.                                                                                    |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 20. Pig iron is sold on 3 or 4 months' credit, and bartered for blooms and bar iron.                                                                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 21. It varies, but there has been a small increase both in labor and grain.                                                                                                      |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, for what credit? if bartered, for what?                                                                                                                                                                          | 22. From 22 to \$24.                                                                                                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                          |                                                                                                                                                                                  |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 |                                                                                                                                                                                  |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present tariff is scarcely sufficient.                                                                            |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Cannot say.                                                                                                           |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. About 3 per cent.; the remainder expended in making improvements.                                                     |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. We consider all our cost, labor, and grain, and the immediate products of the neighborhood.                           |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. About 2,000 bushels wheat, 6,000 bushels rye and corn, together with oats, buckwheat, potatoes, beef, and pork.       |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                                                                          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Do not know, but likely would carry on until we sunk our capital.                                                     |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. We would have none to employ, for all our capital would not be worth anything.                                        |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Yes, plenty, but no use to us.                                                                                        |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. No; our iron has to go either east or west, where it meets foreign competition; very little used in the neighborhood. |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. \$40,000 real and personal; if the works were stopped, not worth \$15,000.                                            |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction shall be?                                                                                                                                                                   | 34. Few works now yield 6 per cent. on all capital invested.                                                              |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                                                                                           | 35. Unacquainted with the subject.                                                                                        |

## DOCUMENT 14.—No. 66—Continued.

| QUESTIONS.                                                                                                                       | ANSWERS.                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                              | 36. Do not know.                                                           |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                      | 37. Do not correctly know, but might be manufactured to any amount wanted. |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824? | 38. Do not know.                                                           |
| 39. Average profit of money or capital in the United States?                                                                     | 39. Do not know.                                                           |
| 40. Average rate of wages?                                                                                                       | Average about \$16, except iron works.                                     |

LYON, FOSTER &amp; CO.

## DOCUMENT 14.—No. 67.

*Pennsylvania Furnace, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Huntingdon county, 20 miles from Huntingdon, and 20 miles from Bellefonte.                                       |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. A blast furnace, called Pennsylvania Furnace; propelled by water power; one tweek.                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1813; a joint stock concern.                                                                                                |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$50,000 invested in 20,000 acres of land, 60 or 70 buildings, with water power, &c. &c.                                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. The annual amount of expenditure exceeds \$30,000.                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. No borrowed capital.                                                                                                           |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                               | 7. The increase or decrease of profit is caused by the rise or fall in the price of bar iron.                                     |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Too variable to be estimated.                                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Manufactured annually about 1,450 tons pig iron and 20 tons castings; pig iron worth \$2 to \$25 per ton.                      |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 2,400 loads coal, worth \$12,000; 3,500 tons ore, worth \$5,600; no foreign products used; value of coal and ore on the bank. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. Cannot say.                                                                                                                                                                                       |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. About 70 men employed, having about 25 families; average wages per month about \$22; women and children seldom employed.                                                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Hands hired by the month; from sunrise to sunset during the year; furnace hands by turns, night and day during the blast; wood choppers by the cord; colliers by the load.                        |
| 14. Rate of wages of similar classes otherwise employed, in the same State and country, in other States, and in foreign countries?                                                                                                                                                                                                         | 14. In this section of the country from 14 to \$16 per month, (common;) as for other States and foreign countries not prepared to say.                                                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. About 60 horses employed.                                                                                                                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                                                                                                                                                                                                                    | 16. Part manufactured at our own forge, and part sold or exchanged for blooms.                                                                                                                        |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. No foreign competition in this market.                                                                                                                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. The pig iron is manufactured into blooms in the immediate neighborhood of the furnace, and sent to Pittsburgh, rolled into bar iron and all other descriptions of iron, and consumed in the west. |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. None.                                                                                                                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Pig iron is sold on a credit from two to four months; also bartered for blooms.                                                                                                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. There has been a small increase of cost both in material and in labor; cannot say at what per annum.                                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. From 22 to 25 dollars.                                                                                                                                                                            |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market with similar articles imported?                                                                                                                                                                                                | 23. That under the present tariff of duties is scarcely sufficient.                                                                                                                                   |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Do not know.                                                                                                                                                                                      |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. The dividends have been inconsiderable: most of the income is expended in improvements.                                                                                                           |

## DOCUMENT 14.—No. 67—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                         | 27. About 2,500 bushels wheat, 7,500 do. rye and corn, together with oats, buckwheat, potatoes, beef, pork, &c., to the value of 8 or \$10,000.               |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                     | 28. Not prepared to give an estimate.                                                                                                                         |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Such a reduction would, we apprehend, reduce our article at least 25 per cent., and, of course, we would have to stop when our capital becomes exhausted. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                           | 30. A large proportion of our capital is in lands, which are of little value except for our present manufacturing purposes.                                   |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                            | 31. We would be without capital.                                                                                                                              |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction shall be?                                                                                                 | 34. A very slim reduction.                                                                                                                                    |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                              | 37. The entire demand would be supplied if full confidence were felt in the permanency of protection.                                                         |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                         | 38. Do not know.                                                                                                                                              |
| 40. Average rate of wages?                                                                                                                                                                                                                                               | 40. Wages for common laborers about 16 dollars.                                                                                                               |

SHORB, STEWART &amp; CO.

## DOCUMENT 14.—No. 68.

*Air Foundry, Indiana County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                                                      |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Blairsville, Indiana county, Pennsylvania.                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?            | 2. Air foundry, iron.                                                         |
| 3. When established; and whether a joint stock concern?                                         | 3. In the fall of 1831.                                                       |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                 | 4. Three thousand dollars.                                                    |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. Cost of metal and coal per day, \$30 75. Amount of labor per day, \$14 75. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed?</p> <p>7. Cause of the increase, (or decrease, as the case may be,) of profit?</p> <p>8. Rates of profit on capital otherwise employed in the same State and county?</p> <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p> <p>10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?</p> <p>11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?</p> <p>12. Number of men, women, and children employed, and average wages of each class?</p> <p>13. How many hours a day employed; and what portion of the year?</p> <p>14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?</p> <p>15. Number of horses or other animals employed?</p> <p>16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?</p> <p>17. Whether foreign articles of the like kinds enter into competition with them at such places of sale, and to what extent?</p> <p>18. Where are the manufactures consumed?</p> <p>20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?</p> <p>21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year?</p> <p>22. The prices at which the manufactures have been sold by the manufacturer since the establishment?</p> <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p> <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of the capital?</p> | <p>6. About 15 per cent.; no capital borrowed.</p> <p>7. Home and foreign competition, rise and fall of labor and provisions.</p> <p>8. From ten to twenty per cent.</p> <p>9. At the rate of 260 tons per annum; various kind of castings; price from \$50 to \$70 per ton.</p> <p>10. 300 tons metal; 9,000 bushels mineral coal; value \$9,225 per annum.</p> <p>11. Castings for railroads have been imported at \$40 or 45 per ton from England.</p> <p>12. 12 men, averaging \$1 25 per day each.</p> <p>13. All the year, and about 12 hours in the day.</p> <p>14. In this country common laborers receive on the public works, 87½ cents per day; on farms from 60 to 75 cents per day.</p> <p>15. 1 horse.</p> <p>16. At home, east along the canal, and west also.</p> <p>17. Railroad iron imported.</p> <p>18. In this and the neighboring counties.</p> <p>20. Sold in part for cash; part credited from three to nine months, and bartered for produce.</p> <p>21. Has continued regular since erected.</p> <p>22. See answer to query 9.</p> <p>23. Not less than the present duty.</p> <p>24. None that we know of.</p> <p>26. About two-thirds; one-third labor.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                         | 27. The provisions used by the men and their families.                |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                     | 28. Have not correct information on this point.                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We think this would render our business unproductive.             |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                           | 30. If this would be the case, our capital would be principally sunk. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent?                                                                                               | 31. Yes, "we could dig."                                              |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                              | 32. No.                                                               |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                              | 34. No reduction.                                                     |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                              | 37. Do not know, except from reports in public documents.             |

JONES &amp; EUWER.

## DOCUMENT 14.—No. 69.

*Mr. Isaac McKinney's Forge, Lycoming County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                   |
|-------------------------------------------------------------------------------------------------|--------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. State of Pennsylvania, Lycoming county. |
| 2. Kind or description of the manufactory?                                                      | 2. Forge, 4 fires, and 2 hammers.          |
| 3. Capital invested in ground and buildings?                                                    | 3. Fifteen thousand dollars.               |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 4. Eighteen thousand dollars annually.     |

## DOCUMENT 14—No. 69—Continued.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Annual rates of profit on the capital invested?                                                                                    | 5. About 8 per cent.                                                                                                                                               |
| 6. Cause of the increase or decrease, as the case may be, of profit?                                                                  | 6. Decrease by the importation of foreign iron; increase by rolling mills established in this county.                                                              |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 225 tons bar iron at \$75 per ton, at market; 75 tons bloom iron at \$60, at works, per ton.                                                                    |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. 3,000 cords wood at 40 cents per cord; 1,500 bushels wheat at \$1 00; and 2,000 bushels rye and corn at 60 cents—domestic products.                             |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                        | 9. Bar iron imported from Europe; \$90 in this county, \$60 in Philadelphia.                                                                                       |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. 30 men at \$25 per month; 20 women at \$6 per month.                                                                                                           |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. 12 hours per day, all the year.                                                                                                                                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. One half sold at the works, the other half sent about 200 miles to market.                                                                                     |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 13. To a small extent at the works, but to a great extent at market.                                                                                               |
| 14. Where are the manufactures consumed?                                                                                              | 14. That sold at the works is consumed in the county and southwest part of New York; and the part sent to market is consumed in Philadelphia and Baltimore cities. |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. Not exported.                                                                                                                                                  |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Sold for cash at six months' credit.                                                                                                                           |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. \$75 per ton for bar iron at market, and \$90 at works; blooms \$60 per ton in market.                                                                         |
| 19. What has been the rate of your profits, annually, for the last three years?                                                       | 19. About 8 per cent. per annum.                                                                                                                                   |
| 20. Amount of capital?                                                                                                                | 20. Twenty-five thousand dollars.                                                                                                                                  |
| 21. Average rate of wages.                                                                                                            | 21. Men \$25 per month.                                                                                                                                            |

## DOCUMENT 14.—No. 70.

Messrs. E. H. Russel &amp; Co.'s Forge, Lycoming County, West Pennsylvania.

| QUESTIONS.                                                | ANSWERS.                                   |
|-----------------------------------------------------------|--------------------------------------------|
| 1. State and county in which the manufactory is situated? | 1. State of Pennsylvania, Lycoming county. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Forges, 3 fires; 2 hammers; water power.                                                                                                         |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Joint stock.                                                                                                                                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. 12,000 dollars.                                                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. 3,000 dollars.                                                                                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Seven per cent.                                                                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 130 tons bar iron, best quality, average value 90 dollars per ton. 50 tons blooms, best quality, average value \$60 per ton.                     |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 270 tons pig iron at \$31½ per ton; 1,500 cords wood at 50 cents per cord.                                                                      |
| 12. Number of men, women, and children employed; and average wages of each class?                                                                                                                                                                                                                    | 12. 18 men at \$27 per month; 4 boys at \$4 per month.                                                                                              |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours per day, 11 months in the year.                                                                                                        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 10 horses and 4 oxen.                                                                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Market for one half of our bar iron at home, the other half and blooms sent 200 miles.                                                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale? and to what extent?                                                                                                                                                                           | 17. Very little at home, but to a considerable extent in market.                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Full half bar iron and whole of blooms sold for cash at 6 months' credit; the rest bartered for salt, pig iron, pork, grain, fish, and plaster. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Increase in materials and in labor.                                                                                                             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. From \$75 to \$120 per ton.                                                                                                                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                           | 23. Present duties.                                                                                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. No dividends have been made.                                                                                                                       |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. \$75 per ton; pig iron, coal, labor, and profits, in cash.                                                                                         |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 600 bushels wheat; 1,000 bushels rye; 500 bushels corn; 300 bushels oats; 100 bushels potatoes; 100 bushels buckwheat, 4 tons pork, &c.; domestic. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Must abandon the business.                                                                                                                         |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. The greater part of the capital would be lost.                                                                                                     |

## DOCUMENT 14.—No. 71.

*Iron Forge, Lycoming County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Lycoming county.                                                                                                                        |
| 2. Kind or description of the manufactory?                                                                                            | 2. Forge, 4 fires, and 2 hammers.                                                                                                                                 |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Twenty-five thousand dollars.                                                                                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Twenty thousand dollars.                                                                                                                                       |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Seven per cent.                                                                                                                                                |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Decrease of profit arises from the increased quantity of foreign iron forced on our market, and increase from rolling mills being established in this country. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 200 tons bar iron, at \$75 per ton at city, 100 tons bloom, at \$60 at works, per ton.                                                                         |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. 3,000 cords wood, at 40 cents; 550 tons pig iron, at \$29; 1,500 bushels wheat, at \$1; 2,000 bushels rye and corn, at 60 cents; all domestic products.        |

| QUESTIONS.                                                                                                                   | ANSWERS.                                                                   |
|------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?               | 9. Bar iron from different parts of Europe at \$60 per ton.                |
| 10. Number of men, women, and children employed, and average wages of each class?                                            | 10. 35 men, at \$25 per month; 20 horses.                                  |
| 11. How many hours a day employed; and what portion of the year?                                                             | 11. 12 hours per day all the year.                                         |
| 12. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                    | 12. Sent to Philadelphia and Baltimore. About 200 miles.                   |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?   | 13. Foreign iron enters into competition to considerable extent.           |
| 14. Where are the manufactures consumed?                                                                                     | 14. Both consumed in the neighborhood of Baltimore and Philadelphia.       |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                    | 15. None exported.                                                         |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on a credit, at what credit? if bartered, for what? | 16. Sold for cash at six months' credit.                                   |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                         | 17. Bar iron \$75, after deducting freight to market; bloom \$60 at works. |
| 19. What has been the rate of your profits annually for the last three years?                                                | 19. About 6 per cent per annum.                                            |
| 20. Amount of capital?                                                                                                       | 20. Thirty thousand dollars.                                               |
| 21. Average rate of wages?                                                                                                   | 21. Twenty-five dollars per month.                                         |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Lycoming county.                                                                                                                         |
| 2. Kind or description of the manufactory?                                                                                            | 2. Forge, 4 fires, and 2 hammers.                                                                                                                                  |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Fifteen thousand dollars.                                                                                                                                       |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Eighteen thousand dollars.                                                                                                                                      |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Eight per cent.                                                                                                                                                 |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Decrease of profit by importation of foreign iron; rolling mills established would increase.                                                                    |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 225 tons bar iron, at \$75 per ton; 75 tons bloom iron, at \$60, at forge.                                                                                      |
| 8. Quantity and value of different kinds of raw material used; distinguishing between foreign products and domestic products?         | 8. 3,000 cords wood, at 40 cents; 1,500 bushels wheat, at \$1; 2,000 bushels rye and corn, at 60 cents; 550 tons pig iron, at \$30 per ton: all domestic products. |

## DOCUMENT 14.—No. 72—Continued.

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?             | 9. Bar iron imported from Europe, \$90 per ton in this county.                             |
| 10. Number of men, women, and children employed, and average wages of each class?                                          | 10. 30 men, at \$25 per month; 20 women, at \$6 per month.                                 |
| 11. How many hours a day employed; and what portion of the year?                                                           | 11. 12 hours per day; employed all the year.                                               |
| 12. Whether the manufactures find a market at the manufactory? if not, how far are they sent to market?                    | 12. Half sold at the factory, the other half sent 200 miles to market.                     |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent? | 13. They enter into competition to a large extent in markets, but small at home.           |
| 14. Where are the manufactures consumed?                                                                                   | 14. Baltimore and Philadelphia, southwest part of New York, and in this county.            |
| 15. Whether any of the manufactures are exported to foreign countries; and, if so, where?                                  | 15. Not known whether any are exported or not, but supposed not.                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered; for what? | 16. The principal part is sold at 6 months' credit for cash.                               |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Bar iron \$90 at the works, and \$75 at Philadelphia; bloom iron \$65 at the city.     |
| 19. What has been the rate of profits annually for the last three years?                                                   | 19. About eight per cent., arising as much from exchange of goods as from the manufactory. |
| 20. Amount of capital?                                                                                                     | 20. Twenty-five thousand dollars.                                                          |
| 21. Average rate of wages?                                                                                                 | 21. Men twenty-five dollars per month.                                                     |

HEPBURNE &amp; LANGCAKE.

## DOCUMENT 14.—No. 73.

*Manufactory of Bar Iron, Luzerne County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Near the mouth of Nescopeck Creek, Luzerne county, Pennsylvania. |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Manufactory of bar iron from pigs.                               |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1831, by individual enterprise; water power.      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Twelve thousand dollars.                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. When in full operation 70 dollars per day.                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. The establishment has, as yet, yielded nothing.                  |

## DOCUMENT 14.—No. 73—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                       | 7. The casualties incident to new works have sunk the profits.                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. About 1 ton of bar iron per day; the works in operation but a short time.                                           |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                             | 10. 50 tons of pigs of the furnaces of Pennsylvania; capacity for 450 tons annually.                                   |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                           | 12. 16 men in forge, say at 1 dollar, and say 16 in coaling, &c., and teaming.                                         |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. From 10 to 12.                                                                                                     |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                            | 14. About the same.                                                                                                    |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                             | 15. 8 horses.                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. Home market for about one-third; the residue from 20 to 80 miles.                                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                  | 17. They do.                                                                                                           |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the northern counties of Pennsylvania and southern New York.                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                    | 19. None from this.                                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Ninety days, and sometimes bartered for grain, &c.                                                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Not informed.                                                                                                      |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. 85 and 90 per ton.                                                                                                 |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                  | 23. Not able to state precisely, but suppose an increase from the present rate.                                        |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                            | 24. Do not know.                                                                                                       |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                | 26. One-half raw material; two-fifths labor; residue, profits of capital in the shape of interest on capital invested. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                            | 27. Agricultural productions, \$235 per month; domestic, say \$12,000 per annum.                                       |
| 28. What quantity or amount of manufactures, such as you make, are produced in the U. States, and what amount in your own State?                                                                                                                            | 28. Not informed.                                                                                                      |

## DOCUMENT 14.—No. 73—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Must abandon.                                                                                                       |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. The capital would be lost absolutely.                                                                               |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                             | 31. Many others if we had our capital again in money.                                                                   |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. The iron of this forge is not out of foreign competition, except in its immediate neighborhood; say within 3 miles. |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. 14,000 dollars; real 10,000 dollars; borrowed 4,000 dollars.                                                        |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction should be?                                                                                             | 34. Increase the duties 12½ per cent., and we can then make 6½ to 7 per cent.                                           |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. In Luzerne county, domestic 50 per cent. to the whole consumption; remainder foreign manufactures.                  |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                            | 39. About 5½ per cent.                                                                                                  |

NESCOECK FORGE, *April 21, 1832.*

J. A. GORDON, *Agent.*

## DOCUMENT 14.—No. 74.

*Iron Foundry, Luzerne County, West Pennsylvania.*

| QUESTIONS.                                                                                       | ANSWERS.                                               |
|--------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                        | 1. Pennsylvania, Luzerne county.                       |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?             | 2. Foundry; water power; situated on Huntingdon creek. |
| 3. When established, and whether a joint stock concern?                                          | 3. Established 1830; not joint.                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                  | 4. About eight hundred dollars.                        |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages? | 5. About seven hundred dollars.                        |

## DOCUMENT 14.—No. 74—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. About seven per cent.                                                                                     |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Not experienced either decrease or increase.                                                              |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From six to twenty per cent.                                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About ten tons per annum; ploughs, millgearing, &c.; ploughs at about \$6 50; mill-gearing \$100 per ton. |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. About 10 tons of pigs at \$37 50 per ton; 50 dollars' worth of coal.                                     |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Two men at about 25 dollars per month.                                                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. About ten hours, and 9 months in the year.                                                               |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. From ten to thirteen dollars per month.                                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Two horses.                                                                                              |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. At the factory, or in the neighborhood.                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Sold generally at six months' credit.                                                                    |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Not experienced any change.                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. A depreciation of about one-sixth.                                                                       |

S. B. LACOCK.

## DOCUMENT 14.—No. 75.

*Iron Furnace, Mifflin County, West Pennsylvania.*

| QUESTIONS.                                                | ANSWERS.                         |
|-----------------------------------------------------------|----------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Mifflin county, Pennsylvania. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2. Kind of description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Patent blast furnace; water power; making castings and pig iron.                                                                                                                  |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. First built in 1804, and in operation to 1816; then abandoned till rebuilt in 1831, by D. N. Hulings, the present owner.                                                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Without stock; \$25,000, lands, buildings, and machinery.                                                                                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Say from 20 to 25,000 to \$30,000, in proportion to the time she is in blast.                                                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Annual rate would be presumed at 8 per cent.; no part of the capital borrowed.                                                                                                    |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. The weather favorable for wood chopping, coaling, &c.; the last two winters have been unfavorable; local situation and careful management, or the contrary, cause profit or loss. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. This depends on the manner invested; the farming capital don't give 3 per cent.                                                                                                   |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Will amount to 35 to \$45,000; castings, a variety; pigs for foundries and for bar iron.                                                                                          |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. \$10,000 of raw materials; goods used principally domestic.                                                                                                                      |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Cost of similar imported articles would be much greater; carriage and freight added.                                                                                             |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. I employ about from 60 to 80 men and boys; few women; 10 to \$12 when found, from 18 to \$21 per month, finding themselves.                                                      |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours per day, and 11 months in the year.                                                                                                                                     |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Farmers, &c., give about \$16, including board; mechanics from 16 to \$23 per month.                                                                                             |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 25 to 35 horses constantly in our employ.                                                                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Part sold at and near home; balance sent from 75 to 180 miles.                                                                                                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. No competition in castings and pigs, except in the seaports, and to a great extent for machinery.                                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Castings in the vicinity, pigs in the foundries and forges.                                                                                                                      |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                             | 19. None exported.                                                                                                                                                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. No sales for less than 60 days, usual credit 4 and 6 months; bartered for bar iron.                                                                                              |

## QUESTIONS.

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?

25. What has been the rate of your profits annually for the last three years; and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?

32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?

33. Amount of capital; and what proportion the borrowed capital bears to that which is real?

## ANSWERS.

21. Cost has increased two to four per cent. per annum: increase owing to the price of labor and procuring provisions, &c.

22. Pigs are sold at \$25 to \$27 50 per ton, castings 70 to \$80 per ton.

23. The rate of duties now laid are scarce sufficient to keep up or to enter into competition in the home market.

24. The present mode, so far as we know, is sufficient.

25. But 3 months in blast; much capital has been expended, no profit yet realized; and I think iron establishments in this section of country must have all local advantages, and be prudently managed, or they will produce loss, not profit.

26. About one-half in raw material, one-third in labor, balance on capital.

27. Wheat, rye, corn and oats, hay and straw, \$4,800; bacon, butter, &c., \$1,500; 2,500 to \$3,000 in goods.

28. Don't know.

29. Bankruptcy would cause it to be abandoned; we now can barely live; then ruin must ensue; and our markets be supplied from abroad till imposition would cause reaction.

30. Bury it in the earth, or set fire to the works, and run away by the light.

31. The farmers, manufacturers, and other tradesmen can live by mutual dependence; destruction of the one is ruin to all.

32. No sale in our section.

33. 25 to \$30,000; none borrowed.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction should be?                                      | 34. The present duties, counting accidents, losses from unforeseen causes, weather, bad roads, high price of labor and provisions, capital invested in land, buildings, stock, taxes, were deducted, will not yield 4 per cent. |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. Take off the minimums, the minimums will not be long in existence: we need all the present protection.                                                                                                                      |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. Bears a proportion of 4 to 6, I think.                                                                                                                                                                                      |
| 38. Extent of individual or household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                  | 38. Is great, and has been almost called in to comparative existence since the tariff of 1824.                                                                                                                                  |
| 39. Average profit of money or capital in the United States?                                                                                                                                                     | 39. About $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent.                                                                                                                                                                            |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. 9 to \$12 per month when found, 16 to \$22 not found in board.                                                                                                                                                              |

The above answers are given on mature consideration; and I pledge myself for their being correct, as far as given.

DAVID N. HULLING.

Lewistown, Pa., April 20, 1832.

## DOCUMENT 14.—No. 76.

*Iron Furnace, Mifflin County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                         | ANSWERS.                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                          | 1. Mifflin county, Pennsylvania.                                                                                                        |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                               | 2. Blast furnace; water power; making pig iron; forge connected; three fired one.                                                       |
| 3. When established; and whether a joint-stock concern?                                                                                                                                                                                                                                            | 3. Established in 1820. Partners 2, Dot Watson and Wm. Brown, owners. The present proprietors are Wm. and J. Norris.                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                    | 4. Capital invested at the present \$50,000.                                                                                            |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                    | 5. Twenty thousand dollars.                                                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit on that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Ignorant of that, on account of the <del>very</del> being transferred so frequently into the hands of so many different individuals. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                     | 8. All our capital belongs to the iron works; have none other in the State.                                                             |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                    | 9. 700 tons of pig metal annually manufactured; 300 tons of blooms; 50 tons of bar iron; pig metal \$25 per ton; blooms \$64 per ton; iron \$90 per ton, best quality.           |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                          | 10. Coal, for furnace and forge, 200,000 bushels; ore 1,400 tons; coal 4 cents per bushel; ore costs about \$4 per ton. Use 5,000 bushels of rye annually, 200 barrels of flour. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                          | 11. No competition, unless by our own manufactures.                                                                                                                              |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                        | 12. 50 men, 20 women, and children in proportion: not bothered with slaves in the least, nor runaway blacks. Wages for men, \$20 per month per man, find themselves.             |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                         | 13. Hours in the day twelve.                                                                                                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                          | 15. Forty horses constantly employed.                                                                                                                                            |
| 16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?                                                                                                                                                                                                                                | 16. 150 miles to market.                                                                                                                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                               | 17. They do to double the amount sent, both of pig and bar iron.                                                                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                                                               | 20. At six months' credit generally.                                                                                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                              | 21. Labor has increased from two to three dollars per month; the articles manufactured decreased, pig metal \$5, bar iron \$15.                                                  |
| 22. The price at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                      | 22. The works were not in my possession until within the last three years, and therefore I cannot tell for the preceding years; pig metal \$25; bar iron from \$80 to \$90.      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                               | 23. The present duty, or \$25 per ton.                                                                                                                                           |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. From \$1,200 to \$1,500.                                                                                                                                                     |
| 26. What portion of the price of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                            | 26. Two-thirds in labor, and one-third in material and power.                                                                                                                    |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                     | 28. \$7,000 bacon, &c. \$2,000 domestic goods not known.                                                                                                                         |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We would most certainly abandon it. |
| 31. Is there any pursuit in which you could engage from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Almost any thing would be better.   |

As the original proprietors are absent, we are not enabled to answer all the questions, and therefore leave it to your own judgment, from the outlines that we have given; and we believe that the answers that we have given are given with accuracy, &c.

For WILLIAM & JOHN NORRIS,  
SAMUEL PATTON.

## DOCUMENT 14.—No. 77.

*Blast Furnace, Mifflin County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                            |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mifflin county, Pennsylvania.    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Blast furnace.                   |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1829 and 1830; three owners.  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Twenty-five thousand dollars.    |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Eighteen thousand dollars.       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 900 tons pig metal, worth \$ 24. |
| 12. Number of men, women and children employed, and average wages of each class?                                                      | 12. Fifty men, at \$ 20 per month.  |
| 13. How many hours a day employed; and what portion of the year?                                                                      | 13. Eleven hours.                   |
| 15. Number of horses or other animals employed?                                                                                       | 15. Sixty horses.                   |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Mifflin county.                             |
| 2. Kind or description of the manufactory?                                                                                            | 2. Foundry and plough making.                                |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Eight thousand dollars.                                   |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Seven thousand dollars.                                   |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Cannot tell; perhaps ten per cent.                        |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. About \$9,000 in castings, &c. of different descriptions. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Pig metal, and no foreign materials.                      |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Twelve men and two horses.                               |
| 21. Average rate of wages?                                                                                                            | 21. One dollar per day.                                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Huntingdon county, Pennsylvania.                                                                                                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Two fired forge; water power.                                                                                                        |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1830; joint stock concern.                                                                                            |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. The whole is worth about \$10,000.                                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. For the forge, from \$16 to \$17,000, including wheat, rye, corn, pig iron, wages, &c.; that is, for one year.                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. No borrowed capital; annual rate of profit is something like \$2,000.                                                                |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                               | 7. I know but little alteration on the rates, as I have but lately begun the business.                                                  |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. The other property, is in the above mentioned county and State, and profits me annually something like \$600: it is a mill and farm. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                      | ANSWERS.                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p>                                                                                                                                                                                                    | <p>9. Articles manufactured consist of iron and blooms; manufacture something like \$20,000 worth. The articles are of good quality. We manufacture about half the number of dollars' worth of blooms, and the remainder is bar iron.</p>             |
| <p>10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?</p>                                                                                                                                                                                                          | <p>10. We make use of no foreign articles, and the other you will see in question 5th: but the pig metal is worth \$9,000 per annum that we work up.</p>                                                                                              |
| <p>12. Number of men, women, and children employed, and average wages of each class?</p>                                                                                                                                                                                                                                                        | <p>12. The wages of the 20 men average about \$4,320; the wages that I give different; differ frequently 4 or 5 dollars per month.</p>                                                                                                                |
| <p>13. How many hours a day employed, and what portion of the year?</p>                                                                                                                                                                                                                                                                         | <p>13. 12 hours per day the whole year.</p>                                                                                                                                                                                                           |
| <p>14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?</p>                                                                                                                                                                                                         | <p>14. There are five hands attending the mill and farm. I pay them \$12 per month per man.</p>                                                                                                                                                       |
| <p>15. Number of horses or other animals employed?</p>                                                                                                                                                                                                                                                                                          | <p>15. Horses. We keep in constant employ about 12 about the forge; on the farm 4 horses are kept in employ.</p>                                                                                                                                      |
| <p>16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?</p>                                                                                                                                                                                                                                | <p>16. We send to Pittsburgh and Philadelphia what we do send to market; but we sell considerably about home.</p>                                                                                                                                     |
| <p>17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?</p>                                                                                                                                                                                                               | <p>17. No competition at home, but in Pittsburgh and Philadelphia they do to a considerable extent.</p>                                                                                                                                               |
| <p>18. Where are the manufactures consumed?</p>                                                                                                                                                                                                                                                                                                 | <p>18. In America.</p>                                                                                                                                                                                                                                |
| <p>19. Whether any of the manufactures are exported to foreign countries? and, if so, where?</p>                                                                                                                                                                                                                                                | <p>19. None, I believe, but am not certain.</p>                                                                                                                                                                                                       |
| <p>20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?</p>                                                                                                                                                                                                               | <p>20. For cash in part, and credit in part. When cash'd, we make a discount of about 2½ per cent.</p>                                                                                                                                                |
| <p>21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p>                                                                               | <p>21. The cost of manufactured articles is about the same that it was when I began.</p>                                                                                                                                                              |
| <p>22. The prices at which the manufactures have been sold by the manufacturer since the establishment?</p>                                                                                                                                                                                                                                     | <p>22. Iron \$90 per ton; blooms \$67 50 cts per ton. These have been about the rates since the establishment.</p>                                                                                                                                    |
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                                                                                                                                               | <p>23. If you consider Pittsburgh and Philadelphia home markets, about the present duty.</p>                                                                                                                                                          |
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                                                                                                                                                                         | <p>24. The present mode, so far as we know, is sufficient.</p>                                                                                                                                                                                        |
| <p>25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>25. We have been, so far, laying out our money as fast as we made it in making improvements; and we are also brothers, and keep no strict account with one another, so that we do not know any thing about the dividend that ought to be made.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. Wheat, rye, corn, bacon, &c. \$3,690; about \$4,320 for labor.                                                              |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. Judge, if you please, from my former statements.                                                                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I would abandon the business.                                                                                               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Employ it in the best manner possible; perhaps convert the forge into a fish basket, as it is at the lower part of the dam. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. A deduction of that kind would produce such an emotion among the people, that I cannot say.                                 |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them? and what is the extent of that circle?                                                                             | 32. No salt; in our situation judge of the circle by the different markets above mentioned.                                     |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. Have no borrowed capital, and I made a statement of the other above.                                                        |

## DOCUMENT 14.—No. 80.

*Iron Works, Mifflin County, West Pennsylvania.*

| QUESTIONS.                                                                                       | ANSWERS.                         |
|--------------------------------------------------------------------------------------------------|----------------------------------|
| 1. State and county in which the manufactory is situated?                                        | 1. Pennsylvania, Mifflin county. |
| 2. Kind or description of the manufactory? and whether water, steam, or other power?             | 2. Furnace; water power.         |
| 3. When established; and whether a joint stock concern?                                          | 3. In 1812.                      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                  | 4. \$19,000.                     |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages? | 5. \$8,000.                      |

## DOCUMENT 14.—No. 80.—Continued.

| QUESTIONS.                                                                                                                            | ANSWERS.                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Castings and pig metal amount to about \$10,000. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. 20 men.                                         |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?      | 14. \$22 per month.                                 |
| 15. Number of horses or other animals employed?                                                                                       | 15. 16 horses.                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. In the neighborhood.                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale? and to what extent?            | 17. No.                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 19. None.                                           |

MICHAEL WALLACE.

## DOCUMENT 14.—No. 81.

*Messrs. Johns and Huffman's Forge, Northumberland County, Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Northumberland county.             |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Forge; water power.                              |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In A. D. 1825.                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. About \$5,000.                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About \$4,000.                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Three per cent.                                  |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. Want of capital and competition of foreign iron. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From 6 to 25 per cent.                           |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 50 tons bar iron.                                |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. 5,000 bushels coal, at 4 cents per bushel; 250 tons of pig metal, at \$30 per ton. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. From \$65 to \$85 per ton.                                                         |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. 8 men at \$25 per month.                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. 10 horses.                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. In the district one half; rest sent to Philadelphia.                               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. They do—light iron particularly.                                                   |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. Not.                                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Cash and barter.                                                                   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. From \$90 to \$100 per ton.                                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. An increase of 30 per cent. on light iron.                                         |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Three per cent.                                                                    |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Must abandon—could not manufacture at reduced prices.                              |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to twelve and a half per cent?                                                                                                                                                                | 31. Many pursuits.                                                                     |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. They are not.                                                                      |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual the reduction should be?                                                                                                                                                                  | 34. They do not now yield 6 per cent.                                                  |

## DOCUMENT 14.—No. 82.

*Iron Foundry, Northumberland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Northumberland county.                                                                                                                                                                            |
| 2. Kind or description of the manufactory?                                                                                            | 2. Foundry. Horse power. 5 horses.                                                                                                                                                                                 |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Two thousand dollars.                                                                                                                                                                                           |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Two thousand dollars.                                                                                                                                                                                           |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. About seven per cent.                                                                                                                                                                                           |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Not experienced any increase or decrease.                                                                                                                                                                       |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. \$10,000 worth. Stoves, ploughs, mill-gearing, and machinery of various kinds of a good quality. Cooking stoves are worth \$25, common stoves \$9, coal stoves \$13, ploughs \$2 50, mill-gearing \$90 per ton. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. 100 tons of pig, at \$31 per ton.                                                                                                                                                                               |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                        | 9. None brought to this country.                                                                                                                                                                                   |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Ten men, from 75 cts. to \$2 per day.                                                                                                                                                                          |
| 11. How many hours a day employed; and what portion of the year?                                                                      | 11. About 12 hours per day all the year.                                                                                                                                                                           |
| 12. Whether the manufactures find a market at the manufactory? if not, how far are they sent to market?                               | 12. Find market at the factory.                                                                                                                                                                                    |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place, and to what extent?                    | 13. Not experienced any.                                                                                                                                                                                           |
| 14. Where are the manufactures consumed?                                                                                              | 14. In this and the neighboring counties.                                                                                                                                                                          |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                             | 15. Not any exported.                                                                                                                                                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on a credit, at what credit? if bartered, for what?          | 16. Sold generally at a credit of 6 months.                                                                                                                                                                        |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. Refer to answer to question No. 7.                                                                                                                                                                             |
| 19. What has been the rate of your profits annually for the last three years?                                                         | 19. About seven per cent.                                                                                                                                                                                          |
| 20. Amount of capital?                                                                                                                | 20. About four thousand dollars.                                                                                                                                                                                   |
| 21. Average rate of wages?                                                                                                            | 21. Answered No. 10.                                                                                                                                                                                               |

## DOCUMENT 14.—No. 83.

*Forge and Furnace, Union County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Union county.                                                                                                                              |
| 2. Kind and description of the manufactory?                                                                                                | 2. Forge and furnace.                                                                                                                                       |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Eighteen thousand dollars.                                                                                                                               |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                           | 4. Nineteen thousand dollars.                                                                                                                               |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Three per cent.                                                                                                                                          |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. The competition in market of foreign iron.                                                                                                               |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About 240 tons of bar iron, and 360 tons of metal, superior quality. The metal being converted into bar iron, is worth about \$82 per ton at an average. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. 1,000 tons ore, 240,000 bushels charcoal. Ore worth \$3,000, and coal worth \$6,000.                                                                     |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. From 70 to \$95 per ton: imported from England and Russia principally.                                                                                   |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Forty men, at about 75 cts. per day.                                                                                                                    |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Employed about 12 hours a day all the year.                                                                                                             |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Sold principally at Philadelphia. Distance 170 miles.                                                                                                   |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. They do, to an extent of three per cent. and upwards.                                                                                                   |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the United States.                                                                                                                                   |
| 15. Whether any of the manufactures are exported to foreign countries; and, if so, where?                                                  | 15. Not any exported to my knowledge.                                                                                                                       |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on a credit, at what credit? if bartered, for what?               | 16. Sold generally at a credit of 6 months.                                                                                                                 |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. At from 75 to \$100 per ton.                                                                                                                            |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Forty dollars per ton on bar iron.                                                                                                                      |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. About three per cent.                                                                                                                                   |
| 20. Amount of capital?                                                                                                                     | 20. Stated in answers to questions number 3 and 4.                                                                                                          |
| 21. Average rate of wages?                                                                                                                 | 21. Stated in answer to question No. 10.                                                                                                                    |
| 22. Whether by water or other power?                                                                                                       | 22. By water power.                                                                                                                                         |

JOS. EVANS.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Union county.                                            |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Forge, water power.                                                    |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Ten thousand dollars.                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. About thirteen thousand dollars.                                       |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Two per cent.                                                          |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                      | 6. The competition in market of foreign iron.                             |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Bar iron, 170 tons; superior quality worth at an average \$35 per ton. |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?             | 8. Two hundred and fifty tons of pigs, at \$30 per ton.                   |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. From sixty to eighty dollars per ton, from England.                    |
| 10. Number of men, women, and children, employed, and average wages of each class?                                                         | 10. Twenty-two men at 75 cents per day.                                   |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Employed about twelve hours, all the year.                            |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Sold principally at Philadelphia, distance 150 miles.                 |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                 | 13. They do, to the amount of 5 per cent. and upwards.                    |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the United States.                                                 |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not any exported to my knowledge.                                     |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Sold generally at a credit of six months.                             |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. From seventy-five to one hundred dollars.                             |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Forty dollars at least.                                               |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. About two per cent.                                                   |
| 20. Amount of capital?                                                                                                                     | 20. Stated in answer to questions Nos. 3 and 4.                           |
| 21. Average rate of wages?                                                                                                                 | 21. Stated in answer to question No. 10.                                  |

Mr. A. P. Moderwell conducts his works, and has for four years past, without the use of any kind of spirituous liquors.

JAMES GAMBLE.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Venango county, Pennsylvania.                                                                                         |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Bloomery forge, water power.                                                                                          |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1828, joint stock.                                                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Seven thousand dollars.                                                                                               |
| 5. Average amount in materials, in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                          | 5. Four thousand dollars.                                                                                                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Twenty per cent.                                                                                                      |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Cant say.                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Fifty tons blooms and bar iron; bar at \$120, blooms at \$90.                                                         |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Two hundred tons ore, all domestic.                                                                                  |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                   | 12. Sixteen men, at \$20 per month.                                                                                      |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve hours all the year.                                                                                           |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Sixteen dollars per month.                                                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Five horses and three yoke oxen.                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Bar iron in the neighborhood; blooms at Pittsburgh, 160 miles.                                                       |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. None, or to very small amount.                                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Bar iron in the neighborhood; blooms at the rolling mills in Pittsburgh.                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None.                                                                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Part cash, part bartered for articles of produce for support of bloomery; blooms sold at four, six, and nine months. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Price of blooms rather increased; some increase in cost of materials—uncertain what.                                 |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Bar iron \$120, blooms 60 to \$83.                                                                                                                       |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Five hundred dollars.                                                                                                                                    |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. The cost of materials and labor about equal.                                                                                                             |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. About eight hundred dollars.                                                                                                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. If it would have any effect on the Pittsburgh market, we must stop.                                                                                      |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Dont know.                                                                                                                                               |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                                                                                                                                                                               | 31. Almost any other.                                                                                                                                        |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. No doubt they are, but the distance depends on whether it is water or land carriage, and the kind and state of the roads; a radius of one hundred miles. |
| 33. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                                                                                           | 33. Decreased.                                                                                                                                               |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                                 | 40. Sixteen dollars.                                                                                                                                         |

JAMES L. CHACE &amp; Co

## DOCUMENT 14.—No. 86.

*French Creek Forge, Venango County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                         |
|--------------------------------------------------------------------------------------|----------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Pennsylvania, Venango county. |
| 2. Kind or description of the manufactory, and whether water, steam, or other power? | 2. Forge, water power.           |

## DOCUMENT 14.—No. 39—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1826; individual property.                                                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Eleven thousand dollars.                                                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Six thousand dollars.                                                                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. About two thousand dollars per year.                                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Bar iron and blooms 150 tons; bar iron \$120, blooms \$75, per ton.                  |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. All pig iron; 450 tons, \$12,000; all domestic.                                     |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                   | 12. Twenty-four men, \$18 per month.                                                    |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve hours, all the year.                                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Eight horses and three yoke of oxen.                                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. The bar iron at the manufactory; the blooms at Pittsburgh, 130 miles by water.      |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. None.                                                                               |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Bar iron in the vicinity, blooms at the rolling mills, Pittsburgh.                  |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None.                                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Part for cash, and part bartered for articles for support of the forge.             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Rather decreased; pig metal increased in price from which the iron is manufactured. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. Bar iron about 120 dollars per ton, and blooms from 75 to \$80.                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                           | 23. Present rates of duty too low.                                                      |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted                                                                              | 25. The establishment rented for the last three years for \$1,000 per year.             |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?                                                                                                                                                      |                                                                                                                                 |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. The cost of pig metal bought for the manufacture of iron cost about three-fourths, and wages, labor, &c., about one-fourth. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. About \$1,000.                                                                                                              |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. It would cause me to abandon.                                                                                               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. I don't know.                                                                                                               |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Yes.                                                                                                                        |

SAMUEL HAYS.

## DOCUMENT 14.—No. 87.

*Franklin Forge, Venango County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. Pennsylvania, Venango county.                                                                                                                                                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Forge or bloomery, six fires, two hammers; water power.                                                                                                                                                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. Established in 1828; owned exclusively by Alexander McCalmont.                                                                                                                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. \$17,600.                                                                                                                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                          | 5. \$8,000.                                                                                                                                                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. The profits have not exceeded five per cent. on the capital in any year since the commencement, after deducting the expense for necessary repairs; profits have decreased.                                 |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                  | 7. Improvement of the State by roads and canals has increased the facilities of transportation over the mountains; that, together with domestic competition, has reduced the price of iron from 120 to \$100. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                           | 8. I think not less than 10 per cent.                                                                                                                                                                         |

## QUESTIONS.

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?

11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed? and what portion of the year?

14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?

25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

## ANSWERS.

9. \$12,000; bar iron from 100 to \$120, blooms 80 to \$95, made from ore.

10. \$56,000; all domestic.

11. No foreign iron sold in this county.

12. Twenty-six men constantly, six more during the summer; one dollar per day.

13. Fourteen hours; 10 months.

14. Same county; \$16 per month.

15. Ten horses, six oxen.

16. Part sold at the manufactory, part at Pittsburgh, 120 miles.

17. Think not.

18. Cannot say; part in the vicinity of the works.

19. Cannot say.

20. Sold on a credit of six months; generally for cash.

21. Decreased; last year the labor not so high; the decrease is not one-half per cent.

22. Bar iron from 120 to \$95; blooms from 95 to 75.

23. Not less than 33 per cent. ad valorem.

24. Do not know.

25. Have not exceeded five per cent., and have been all expended in enlarging the establishment: the only source of profit is on the sale of goods; one-half of all wages paid in goods.

26. Five per cent. raw material, ore, and wood; 90 wages and labor; 5 profits.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. Agricultural productions and domestic manufactures consumed by hands and team about \$8,000.                                                                                                                                                                                                                                      |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. Cannot say.                                                                                                                                                                                                                                                                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Any reduction on prices, without corresponding deduction on labor and agricultural products, would cause an enhancement.                                                                                                                                                                                                          |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Capital invested in the manufacture would be reduced in value to the price of the land alone, say \$2,000; any surplus could only be employed in agriculture, suits, which are alone supported by the iron works; both would cease about the same time in this county, as the iron works, and make the market for these products. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. They were, in West Pennsylvania, until the improvements by canal, which are now being made, is drawing them nearer a foreign competition: any change that would affect the Pittsburgh market will be immediately felt in this county.                                                                                             |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. \$17,000; all invested in the water teams, tools, &c. &c.; wages are paid for the sale of manufactured articles, which is the only source of revenue.                                                                                                                                                                             |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                             | 34. Cannot say; think any reduction in duty on iron would destroy all the work in this county.                                                                                                                                                                                                                                        |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                        | 35. Cannot say.                                                                                                                                                                                                                                                                                                                       |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                     | 36. Cannot say.                                                                                                                                                                                                                                                                                                                       |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. Do not know.                                                                                                                                                                                                                                                                                                                      |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                        | 38. Do not know.                                                                                                                                                                                                                                                                                                                      |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                            | 39. Do not know.                                                                                                                                                                                                                                                                                                                      |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. Do not know.                                                                                                                                                                                                                                                                                                                      |

Respectfully, yours,

A. McCALMONT.

FRANKLIN, 25th April, 1831.

P. S. The quantity of bar iron and blooms manufactured as above, are made from the ore and not from pig iron, and would be equal to 180 tons of pig iron.

A. McC.

DOCUMENT 14.—No. 88.

*Oil Creek Furnace, Venango County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Venango county.                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Blast furnace, water power.                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1825; joint stock concern.                                                               |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                       | 4. \$10,000.                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$12,000.                                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Thirty-three per cent.                                                                      |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. Fluctuation of the market.                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 350 tons of pig iron and 50 tons of castings; pigs from 25 to \$35 per ton; castings \$65.  |
| 10. Quantity and value of different kinds of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                                                      | 10. \$1,000; all domestic.                                                                     |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Cannot say.                                                                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Forty men, \$18 per month.                                                                 |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve hours; all the year.                                                                |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. \$16 per month in this part of Pennsylvania.                                               |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Twelve yoke of cattle.                                                                     |
| 16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?                                                                                                                                                                                            | 16. Castings at the furnace; the pigs at Pittsburgh, distant 120 miles by water.               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. No competition of a like foreign article.                                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Pigs at the foundries in Pittsburgh; castings in the neighborhood.                         |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                             | 19. None.                                                                                      |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                           | 20. On an average a credit of four and a half months.                                          |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. The pig metal has fluctuated from year to year 25 per cent.; castings continue stationary. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. 26, 28, 30, 33, and 37 dollars per ton.                                                         |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Present rates low enough.                                                                       |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Cannot say.                                                                                     |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually. | 25. \$3,000.                                                                                        |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Raw materials twelfth part; labor two-thirds; remainder profits.                                |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 1,000 bushels of wheat; 4,000 bushels of rye, corn, and oats, and 20,000 lbs. of pork and beef. |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                                                    |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                     | 29. If it would lessen the price at Pittsburgh, we must stop.                                       |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. I do not know.                                                                                  |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Yes.                                                                                            |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. Cannot say.                                                                                     |
| 33. Amount of capital, and what portion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                                  | 33. Twelve and a half per cent.; none borrowed—only advanced on the manufactured article.           |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual the reduction should be?                                                                                                                                                                  | 34. Cannot say.                                                                                     |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                                                                                           | 35. Cannot say.                                                                                     |

## DOCUMENT 14.—No. 88—Continued.

| QUESTIONS.                                                                                                                       | ANSWERS.        |
|----------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                              | 36. Cannot say. |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                      | 37. Cannot say. |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824? | 38. Cannot say. |
| 39. Average profit of money or capital in the United States?                                                                     | 39. Cannot say. |
| 40. Average rate of wages?                                                                                                       | 40. Cannot say. |

*Bea and Myer's Clarion Furnace, Venango County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                          | ANSWERS.                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                           | 1. Pennsylvania, Venango county.                                     |
| 2. Kind of description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                | 2. Blast furnace; water power.                                       |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                             | 3. In 1829; joint stock.                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                     | 4. \$15,000.                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                     | 5. \$10,000.                                                         |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. 33 per cent.                                                      |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                               | 9. 500 tons pig metal, \$30 per ton; 25 tons castings, \$60 per ton. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                     | 10. \$8,000 domestic.                                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                   | 12. 50 men at \$20 per month.                                        |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                    | 13. 12 hours; all the year.                                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                     | 15. 12 horses; 2 yoke cattle.                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                           | 16. Pittsburgh, (water) 120 miles; castings at home.                 |

## DOCUMENT 14.—No. 89—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. No.                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Foundries at Pittsburgh.                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. No.                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. 3, 6, and 9 months.                                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. \$26 to \$35.                                                      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Present rate low enough.                                           |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. \$3,000.                                                           |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 1,000 bushels wheat; 3,000 oats, ry. and corn; 20,000 domestic.    |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. If it would have any effect on the Pittsburgh market we must stop. |

## DOCUMENT 14.—No. 90.

*John Anderson's Venango Furnace, Venango County, West Pennsylvania.*

| QUESTIONS.                                                                                       | ANSWERS.                                       |
|--------------------------------------------------------------------------------------------------|------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                        | 1. State of Pennsylvania, Venango county.      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?             | 2. Blast furnace; water power.                 |
| 3. When established; and whether a joint stock concern?                                          | 3. Established in 1825. A joint stock concern. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                  | 4. Ten thousand dollars.                       |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages? | 5. Nine thousand dollars.                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                        | ANSWERS.                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. No profit. The furnace ceased operations in 1830 owing to the ore failing both in quantity and quality. |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                             | 7. See answer No. 6.                                                                                       |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                    | 8. Not more than 12½ per cent. at the most successful works.                                               |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                             | 9. 300 tons of pig iron and 40 tons of castings.                                                           |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                   | 10. Ore and wood \$7,000.                                                                                  |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                   | 11. I cannot say.                                                                                          |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                | 12. 40 men annually; \$18 per month.                                                                       |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                  | 13. 12 hours per day, and all the year.                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                  | 14. \$16 per month in this part of Pennsylvania.                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                   | 15. 35 horses.                                                                                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                         | 16. Market entirely in Pittsburgh, distance 100 miles, by water.                                           |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                        | 17. No foreign articles of this description in competition.                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                          | 18. In Pittsburgh the pig iron is used by foundries.                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                          | 19. None.                                                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                        | 20. On an average credit of 4½ months.                                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                        | 21. It has fluctuated from year to year 25 per cent.                                                       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                              | 22. Pig iron at 24, 28, 30, 33, and 35, dollars, per ton. Castings \$50.                                   |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                        | 23. The present rates are low enough.                                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                      | ANSWERS.                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                                                                                                                                                                         | <p>24. I do not know.</p>                                                                                               |
| <p>25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>25. None, as the concern has been unsuccessful.</p>                                                                  |
| <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                                                                                             | <p>26. The whole amount, and more.</p>                                                                                  |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                         | <p>27. 1,500 bushels wheat; 3,500 bushels rye, corn, and oats, and 20,000 lbs. pork and beef.</p>                       |
| <p>28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?</p>                                                                                                                                                                                                     | <p>28. I do not know.</p>                                                                                               |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p>                                                                  | <p>29. It would put a stop to the furnaces if it would have any effect on the Pittsburgh market.</p>                    |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                                                                                           | <p>30. It is impossible to say: I speak for those in operation.</p>                                                     |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?</p>                                                                                                                                                              | <p>31. Yes; a variety—suppose that of merchandizing.</p>                                                                |
| <p>32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p>                                                                                                                                              | <p>32. I cannot say.</p>                                                                                                |
| <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                                                                                                                                             | <p>33. 12½ per cent., as none can be borrowed but by getting money advanced on account of the manufactured article.</p> |
| <p>34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?</p>                                                                                                                                                                | <p>34. I cannot say.</p>                                                                                                |
| <p>35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?</p>                                                                                                                         | <p>35. I do not know.</p>                                                                                               |

DOCUMENT 14.—No. 91.

*Blast Furnace, Venango County, Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Pennsylvania, Venango county.                       |
| 2. Kind or description of the manufactory; and whether water, steam or other power?                                                                                                                                                                                                                  | 2. Blast furnace; water power.                                  |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1826; joint stock concern.                                |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$10,000; water power and machinery.                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$8,000.                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. \$2,000; real estate less valuable yearly, and profits less. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Greater difficulty in obtaining ore and timber.              |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Not more than 12½ per cent. at the most successful works.    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Three hundred and fifty tons pig iron.                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between Foreign products and domestic products?                                                                                                                                                                      | 10. \$7,000; all domestic.                                      |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. I cannot say.                                               |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 40 men annually; 18 dollars per month.                      |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours per day, all the year.                             |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. 16 dollars per month in this part of Pennsylvania.          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 25 horses.                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Market entirely in Pittsburgh; distance 110 miles by water. |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. No foreign article of this description in competition.      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Pittsburgh; used by foundries.                              |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None.                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. On an average credit of 4½ months.                          |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. It has fluctuated from year to year 25 per cent.                                                        |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Pig iron 24, 28, 30, 23, and 36 dollars per ton.                                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Present rates low enough.                                                                               |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. I do not know.                                                                                          |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Average \$2,000 per annum.                                                                              |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. 1,500 bushels of wheat; 3,500 bushels of rye, corn, and oats; 20,000 lbs. port and beef.                |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. I do not know.                                                                                          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                     | 29. It would put a stop to furnace, it would have any effect on the Pittsburgh market.                      |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Impossible to say.                                                                                      |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                                                                                                | 31. Yes.                                                                                                    |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. I cannot say.                                                                                           |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. 12½ per cent., as none can be borrowed, but getting money advanced on some of the manufactured article. |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                                                                                                | 34. I cannot say.                                                                                           |

## DOCUMENT 14.—No. 91—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. I do not know. |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                              | Ditto.             |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | Ditto.             |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                 | Ditto.             |
| 39. Average profit of money or capital in the United States?                                                                                                                                                     | Ditto.             |
| 40. Average rate of wages?                                                                                                                                                                                       | Ditto.             |

GEORGE McCLELLAND.

## DOCUMENT 14.—No. 92.

*Silver Plate Manufactory, Washington County, Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Washington county, Pennsylvania.                                                                                                                                                                                      |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                  | 2. Manufactory of silver-plated ware, viz. bridle-pits, stirrup-irons, coach and harness mounting, &c. &c.                                                                                                               |
| 3. When established, and whether a joint stock concern?                                                                               | 3. Established in 1816; not joint stock concern, but individual.                                                                                                                                                         |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. As near as can be ascertained, \$5,000.                                                                                                                                                                               |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 7. Profits decreased 10 per cent.; cause, competition of domestic manufactured article. Increase of demand for domestic article caused, as I believe, by duty on foreign article, will make up for reduction in profits. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. From \$10,000 to \$12,000 annually.                                                                                                                                                                                   |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. From 20 to 25.                                                                                                                                                                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. 10 hours during the whole year.                                                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. Find a market, half, within 20 miles; the other different distant places.                                                                                                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 17. The foreign article, at present duty, enters into a fair competition with the domestic.                                                                                                                              |

## DOCUMENT 14.—No. 92—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                               | 20. Sold on a credit of 6 months.                                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?              | 21. Cost decreased on account of reduced price of iron and labor.                                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                               | 23. The present rate of duty will no more than enable us to compete with the foreign article in our markets.                |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                         | 24. I believe that a specific duty is the only way in which frauds can be prevented.                                        |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                         | 27. Agricultural products, \$2,000; iron and other domestic manufacturing articles, \$5,000; silver and wages not included. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I would be obliged to abandon or reduce my capital.                                                                     |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                           | 30. No other investiture would be better than agriculture, or dealing in foreign manufactures of the like kind.             |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                            | 31. There would probably be various                                                                                         |

Sir, respectfully yours, &amp;c.

BEN. KENDRICK

April 25, 1832.

## DOCUMENT 14.—No. 93.

*Jacob D. Malhiot's Iron Furnace, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                              |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. In Westmoreland county, and State of Pennsylvania. |
| 2. Kind or description of the manufactory?                                                      | 2. Blast furnace; water power.                        |
| 3. Capital invested in ground and buildings?                                                    | 3. \$30,000.                                          |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 4. \$18,000 per annum.                                |

## DOCUMENT 14.—No. 93—Continued.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 25 per cent.                                                                                                                                                                                                                          |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Prices of the manufactured articles have fallen; but, as the prices of wages and all articles of consumption have fallen also, the profits may be considered as the same.                                                             |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Pig metal, 600 tons, at \$30, \$18,000; castings, 100 tons, at \$50, \$5,000.                                                                                                                                                         |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Ore, 2,400 tons, \$1,440; wood, 5,000 cords, \$1,250.                                                                                                                                                                                 |
| 9. Number of men, women and children employed, and average wages of each class?                                                            | 10. 50 men, from 12 to \$15 per month.                                                                                                                                                                                                   |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 10 hours per day, throughout the year.                                                                                                                                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. A small part of the castings sold at the works; the principal part and all the pig metal sold in Pittsburgh.                                                                                                                         |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. No competition.                                                                                                                                                                                                                      |
| 14. Where are the manufactures consumed?                                                                                                   | 14. Pig metal in Pittsburgh; castings west of that place.                                                                                                                                                                                |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. Unable to say.                                                                                                                                                                                                                       |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Sometimes for cash, but generally at a credit of three and six months.                                                                                                                                                               |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. About 1819-'20, pig metal sold at \$70 per ton, and castings at \$100; a few years afterwards pig metal fell to \$30 per ton, and castings to \$40. At present pig metal is worth from 30 to \$35 per ton, castings from 50 to \$55. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Unable to reply.                                                                                                                                                                                                                     |

N. B. This is the only iron works in operation at present in this county.

ED. JOHNSTON.

## DOCUMENT 14.—No. 94.

*Andrew Murphy's Woollen Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                                           |
|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. State of Pennsylvania, Alleghany county.                                        |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Satinets, and a few broad cloths; water nine, and steam three, months per year. |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                    | 3. Established in 1822; joint stock.                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                            | 4. \$7,000.                                                            |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                           | 5. \$5,000, raw materials and wages.                                   |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                    | 7. Decrease, high price of wool and advance of wages.                  |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                             | 8. Unable to answer.                                                   |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                      | 9. About 8,000 yards, average 80 cents, \$6,400.                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                            | 10. Domestic, \$4,700; foreign, \$308.                                 |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                            | 11. Average price in our market.                                       |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. 17 men at 75 cents, and 5 boys at \$34 cents, per day.             |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                           | 13. Average 11 hours per day.                                          |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                           | 14. Unable to answer.                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. One horse.                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                  | 16. To Pittsburgh, four miles from factory.                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. Few foreign goods of the same description are sold in this market. |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. In Western Pennsylvania.                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                  | 19. None.                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                | 20. Generally at six months' credit.                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Decreased by improvement in machinery and competition.             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. In 1822, sold goods at \$1; the same quality in 1832, at 80 cents. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. Not less than the present duty.                                    |

## DOCUMENT 14.—No. 94—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Unable to say, as all was turned to the manufactory, since the commencement, in buildings and machinery. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Stock and materials, two-thirds; labor, one-third.                                                       |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. \$4,300 agricultural, \$250 other domestic articles.                                                     |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Unable to answer.                                                                                        |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Abandon the business altogether.                                                                         |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Cannot determine at present.                                                                             |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Any other business in the world.                                                                         |

ANDREW MURPHY.

## DOCUMENT 14.—No. 95.

*Hamilton Arthurs' Woollen Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                  |
|-------------------------------------------------------------------------------------------------|-------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. State of Pennsylv'a, Alleghany county. |
| 2. Kind or description of the manufactory?                                                      | 2. Woollen; horse power.                  |
| 3. When established; and whether a joint stock concern?                                         | 3. 1814. Not a joint stock.               |
| 4. Capital invested in ground and buildings, and machinery?                                     | 4. \$2,000.                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. \$3,750, materials.                    |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 7. Annual rate of profit on the capital invested?                                                                                     | 7. About 8 per cent.                                                   |
| 8. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 8. 1,700 yards.                                                        |
| 9. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 9. Domestic \$3,600; foreign \$150.                                    |
| 11. Number of men, women and children employed, and average wages of each class?                                                      | 11. Six men at \$13 per month.                                         |
| 12. How many hours a day employed; and what portion of the year?                                                                      | 12. 12 hours.                                                          |
| 13. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 13. 12 miles, at Pittsburgh.                                           |
| 14. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 14. None but eastern goods of the same description.                    |
| 15. Where are the manufactures consumed?                                                                                              | 15. Western parts of United States.                                    |
| 16. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 16. No.                                                                |
| 17. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 17. Cash, generally.                                                   |
| 18. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 18. Average price up to 1821, \$1 12½; since, and at present 75 cents. |
| 20. What has been the rate of your profits, annually, for the last three years?                                                       | 20. 4 per cent., or thereabouts.                                       |

HAMILTON ARTHURS.

## DOCUMENT 14.—No. 96.

*Woollen Manufactory, Fallston, Beaver County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Fallston, Beaver county, Pennsylvania.                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen manufactory; water power.                                      |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1824. Individual.                                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Eight thousand three hundred dollars.                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About fifteen thousand dollars.                                        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. I ask ten per cent. per annum, but it has not been realized, averaged. |

## QUESTIONS.

8. Rates of profit on capital otherwise employed in the same State and county?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed, and what portion of the year?

14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and, if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?

25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

## ANSWERS.

8. The profits may be compared with cotton and paper. The woollens, as made here and sold at wholesale, will not more than double the cost of wool, upon average. Cotton put into *yarn*, not colored, will treble. Paper, post, weighs  $7\frac{1}{2}$  lbs. \$3.25; No. two, writing,  $11\frac{1}{2}$  lbs. \$3. The labor and cost cannot be equal to manufacturing of wool, besides the cost of *coloring*.

9. About \$15,000. Cloth 6-4, satinets, flannels, and baize.

10. Wool from 20 to 50 cents per pound, alum 6, copperas 3, cotton yarn 18 to 30 cts. per pound, vitriolic acid 8 cents, domestic; indigo, Bengal, \$2; madder, crop. 25 cents; in all about nine thousand dollars.

12. Twelve men average \$16 per month, four women \$1 50 per week, seven boys at \$2 per week, and (some weavers not in the factory) board included.

13. From sunrise to sunset,  $1\frac{1}{2}$  hours off for meals; six months in the year; work until half past eight at night.

14. The wages at many other places given, being higher, frequently causes a change in the workmen very prejudicial to the manufactory here.

16. About one fourth bartered; mostly sent to Pittsburgh, 30 miles.

18. Mostly in the counties adjoining.

19. I think not.

20. Very small part; part on a credit of six and part on a credit of 12 months. Mostly bartered for merchandize.

21. It has increased, almost exclusively in the materials, particularly wool and madder. Could say provisions, the past year or two, makes the labor cost more.

22. Cloth 6-4 from \$1 50 to \$3 50 per yard; satinets from 63 cents to \$1 per yard; three-quarter wide flannel, madder red, 25 to 35 cts.; baize 5-4, green and red, 34 to 50 cts.

24. I saw cloth weaving and finishing in a manufactory in an eastern State; the wool had been colored, and I think spun into yarn in England, as the workmen informed me.

25. The profits of my manufactory are owing to other more lucrative business being connected with it, merchandizing, building and selling houses, &c.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. About one-half of the price of material, and one-half of the wages of labor.                                                                                                                                                           |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. I think near \$ 2,000; many more dependant on me for such than are directly in my employ.                                                                                                                                              |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. If such reduction made the business any worse it would.                                                                                                                                                                                |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. I think I should put it mostly at interest, or buildings to rent.                                                                                                                                                                      |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Divested of any other connexion but merely manufacturing and selling at one season, or one-quarter part of the year, woolen goods, I know of nothing worse.                                                                            |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. I think they are, particularly salt; the latter I think is not affected by importation here.                                                                                                                                           |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. Twenty-three thousand three hundred dollars.                                                                                                                                                                                           |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual the reduction should be?                                                                                               | 34. I do not know. I think no prudent person would invest money in so perishable and dangerous business, for six per cent per annum. Machinery is very expensive, and to dispose of after once used, it cannot be done without great loss. |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                        | These last six queries I cannot answer satisfactorily.                                                                                                                                                                                     |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                     |                                                                                                                                                                                                                                            |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             |                                                                                                                                                                                                                                            |
| 38. Extent of individual and household manufactures in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                       |                                                                                                                                                                                                                                            |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                            |                                                                                                                                                                                                                                            |
| 40. Average rate of wages?                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                            |

Respectfully,

A. W. TOWNSEND.

FALLSTON, 4th month 10th, 1832.

## DOCUMENT 14.—No. 97.

*Woollen Cloth Manufactory, Beaver County, West Pennsylvania.*

## QUESTIONS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established; and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power, and in machinery?
6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?
7. Cause of the increase, (or decrease, as the case may be,) of profit?
8. Rates of profit on capital otherwise employed in the same State and county?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?
12. Number of men, women, and children, employed; and average wages of each class?
13. How many hours a day employed, and what portion of the year?
15. Number of horses or other animals employed?
16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?
17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?
18. Where are the manufactures consumed?
19. Whether any of the manufactures are exported to foreign countries? and, if so, where?
20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?
21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?
22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

## ANSWERS.

1. Beaver county, State of Pennsylvania.
2. Woollen cloth manufactory. Water power.
3. In 1822. Individual concern.
4. About ten thousand dollars.
6. Capital has scarcely averaged six per cent.
7. Profit decreased, attributed to an increased foreign importation, and a rise in the price of domestic work.
8. Supposed to be greater than on woollen manufactures.
9. Satinets 3,000 yards, 75 cents per yard; 1,000 yards broad cloth at \$3 per yard; 3,000 yards flannel at 37½ cents per yard.
10. Wool 60 cents per pound, in 1831, 6,400 pounds; other materials imported, cost of them \$500, perhaps \$100 of home stuffs. These are principally dye stuffs.
12. Nine men, four boys, three girls.
13. Twelve hours per day throughout the year.
15. Four horses.
16. Generally sold in this county and its vicinity.
17. Compete with them, and do injury to a great extent.
18. Generally wherever sold or near to it.
19. Supposed to be none.
20. About equally divided between cash, credit, and trade.
21. Increased cost in 1831, about 30 per cent.
22. Increased about 10 per cent. since 1830; now decreasing.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. About 50 per cent. ad valorem duty.                                                                |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Yes; the value of the imported article ascertained in this country, and the duty laid accordingly. |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. All tariff duties to be paid as soon as the article taxed arrives in the country.                  |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. One thousand dollars, or nearly.                                                                   |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Destroy the business; the only alternative would be agriculture.                                   |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                                                                                                | 34. No reduction. The present duties do no more.                                                       |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                                                                                           | 35. About thirty per cent.                                                                             |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                                                                                        | 36. In a measure abolish the frauds.                                                                   |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                                                                                               | 39. Perhaps not more than six per cent.                                                                |

MATTHEW ELDER.

## DOCUMENT 14.—No. 98.

*Woollen Manufactory, Bedford County, West Pennsylvania.*

| QUESTIONS.                                                | ANSWERS.                         |
|-----------------------------------------------------------|----------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Pennsylvania, Bedford county. |
| 2. Kind or description of the manufactory?                | 2. Woollen.                      |
| 3. Capital invested in ground and buildings?              | 3. Eight thousand dollars.       |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6. Causes of the increase (or decrease, as the case may be,) of profit?                                                                    | 6. Foreign competition cause a decrease of profit.                                                                                                                                    |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. One thousand and fifty-three yards, viz. 330 yards broadcloth, at \$4; 345 yards satinet, at 70 cts. to \$1; 143 yards blankets, at \$1; and 235 yards flannel, at 60 to 70 cents. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Men 2, women 2, boys 2; average wages \$11 20 per month.                                                                                                                          |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Ten hours per day, five months in the year.                                                                                                                                       |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                                                                                               |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Foreign articles do enter into competition sufficient almost to extinguish the domestic one.                                                                                      |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the neighborhood.                                                                                                                                                              |
| 15. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                   | 15. None exported.                                                                                                                                                                    |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Cash and country produce.                                                                                                                                                         |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The tariff of 1828.                                                                                                                                                               |

JOHN LUTZ, *Manufacturer.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Bedford county.                                                                                              |
| 2. Kind or description of the manufactory?                                                                                            | 2. Woollen.                                                                                                                            |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Nine hundred and fifty dollars.                                                                                                     |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Two hundred and seventy dollars.                                                                                                    |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. A small increase in consequence of the tariff of 1828.                                                                              |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Three hundred and sixty yards cloth, 75 a 85 cents per yard; two hundred and forty-five yards satinet, at 70 and 80 cents per yard. |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. Two men and two boys; average \$16 per month.                                                                                      |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Nine hours per day, and four months in the year.                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the factory.                                                                                |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Foreign articles do enter almost sufficient to cause the domestic one to abandon the business. |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the immediate neighborhood.                                                                 |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                                                 |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? it bartered, for what?                 | 16. Sold for cash and raw material, and country produce.                                           |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The duty at present is not sufficient.                                                         |

ABRAHAM KEAGY.

*Woollen Manufactory, Centre County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                          | ANSWERS.                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| 1. State, and county in which the manufactory is situated?                                                                                                                                                                                                                                          | 1. Pennsylvania, Centre county.                                    |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                | 2. Woollen manufactory. Water power.                               |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                             | 3. Commenced in 1823. Individual concern.                          |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                      | 4. Three thousand dollars.                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                     | 5. One thousand dollars.                                           |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About \$500 since established.                                  |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                             | 7. By good work done.                                              |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                      | 8. One hundred dollars.                                            |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                               | 9. Cloth, satinets, flannels, and blankets, \$5,000, more or less. |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                         | 10. Quantity, 7,000 pounds wool, value \$2,800. Domestic.      |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                         | 11. Nothing imported but about \$100.                          |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. 8 men, 2 women, 50 cents per day: not constantly employed. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                        | 13. 12 hours per day at an average.                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. 2 horses part of the time employed.                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. Sold at home.                                              |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                              | 17. Foreign articles sold at the same place.                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. Centre county.                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                | 19. None.                                                      |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Some for cash, &c.                                         |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?              | 21. Some increase.                                             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. Prices about the same.                                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. The rates as they are now established by law.              |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                        | 24. No change necessary only for the better.                   |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Quit the business if reduced.                              |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Go to making rails.                                        |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. I don't know.                                              |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. \$5,000. Borrowed \$800.                                   |

| QUESTIONS.                                                                                                                                                                 | ANSWERS.                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction shall be? | 34. If any reduction takes place we are destroyed. |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                | 37. We sell all we manufacture.                    |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                           | 38. It has greatly increased.                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                             | 1. Centre county, Pennsylvania.                                                                                                                                                                                                                                                             |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                  | 2. Woollen manufactory. Water power.                                                                                                                                                                                                                                                        |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                               | 3. Established in 1829. Joint stock concern.                                                                                                                                                                                                                                                |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                       | 4. Five thousand dollars.                                                                                                                                                                                                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                       | 5. Four thousand dollars.                                                                                                                                                                                                                                                                   |
| 6. Annual rate of profit on the capital invested, since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. One thousand dollars.                                                                                                                                                                                                                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                 | 9. 3,000 yds. satinets, averaging 80 cents per yard - 2,400<br>1,000 do cloth, $\frac{1}{2}$ yd. wide, at \$1 - 1,000<br>100 do flannel, at 60 c. per yard - 600<br>500 do blankets at 80 cents - 400<br>500 do flannel, at 50 cents - 250<br><div style="text-align: right;">\$4,650</div> |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                       | 10. 4,000 lbs. wool, at from 40 to 50 cents per pound; coloring materials, &c. \$400.                                                                                                                                                                                                       |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. 8 men, at 75 cents; 4 boys, at 37½ cts.                                                                                                                                                                                                                                                 |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                      | 13. 12 hours per day; 9 months.                                                                                                                                                                                                                                                             |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Two horses.                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Market within 5 miles.                                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. Foreign articles do enter into competition to a great extent.   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Principally at the iron works.                                  |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. There are none exported to foreign countries.                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. When sold on credit, for six months, when bartered, for iron.   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Articles sold in 1829 at 70 cents, are now selling at 80 cents. |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Our profits have averaged for the last three years \$600.       |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Cost of raw materials about \$2,000.                            |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Six hundred dollars.                                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. We would abandon our business.                                  |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Yes, we could employ our capital, and derive greater profits.   |

EPHRAIM WILLIAMS.

## DOCUMENT 14.—No. 102.

*Woollen Manufactory, Centre County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Centre county.                                                                  |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen manufactory; water power.                                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Commenced in 1824. Individual concern.                                                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Eighteen hundred dollars.                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Six hundred and fifty dollars.                                                                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About 100 dollars per year increase since established.                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Cloth, cassinets, flannels, and blankets, worth 3,000 dollars; common quality wool materials. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Quantity, 4,500 lbs. wool, value 1,500 dollars; all domestic.                                |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Nothing imported but about 12 dollars per annum.                                             |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. 3 men, 1 boy, 1 girl, at 50 cents per day; not constantly employed.                          |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 7 hours at an average per day.                                                               |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 1 horse part of the time employed.                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Sold at home.                                                                                |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. Foreign articles sold at the same places.                                                    |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In Centre county.                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                                                                                                                                                                             | 19. None.                                                                                        |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Some for cash, and some for other trade, &c.                                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Some little increased.                                                                       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. Prices about the same.                                                                       |

## DOCUMENT 14.—No. 102—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                             | 23. The rates as they are now established by law:            |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                       | 24. No change necessary. We are content.                     |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Quit the business if reduced.                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                         | 30. Go to grubbing.                                          |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                                                                                                           | 31. That I cannot tell until a trial.                        |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                           | 33. 3,000 dollars. None borrowed.                            |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction shall be?                                                                                               | 34. If any reduction takes place, we are destroyed.          |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                            | 37. We sell all we manufacture.                              |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                       | 38. It has greatly increased, but cannot say to what extent. |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                           | 39. I can give no satisfactory answer to the last question.  |

JACOB HAUSER.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Crawford county, Pennsylvania.                               |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen manufactory.                                         |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$1,000.                                                     |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$200.                                                       |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 33 per cent.                                                 |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Stationary.                                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. 3,000 yards; $\frac{2}{3}$ cloth, $\frac{1}{3}$ flannel.     |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Dye stuffs, foreign, \$25; domestic copers, soap, &c., \$25. |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. Two men, \$17 per month.                                    |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 14 hours, 7 months of the year.                             |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity.                                            |
| 15. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                   | 15. None exported.                                              |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Cloth \$1, flannels 75 cents.                               |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Duties should not be reduced.                               |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Want of sufficient protection.                   |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. \$ 3,356.                                        |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. Imported from England; cost about the same.      |
| 10. Number of men, women and children, employed, and average wages of each class?                                                          | 10. Three men at \$22 per month; six women at \$10. |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Mostly sent about 70 miles.                     |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                 | 13. They do to a considerable extent.               |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. Nonc.                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. For cash and iron.                              |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Something more than the present tariff.         |

DANIEL MONTGOMERY.

*Woollen Factory, Columbia County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Columbia county. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Water.                         |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1821.                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Fifteen hundred dollars.       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Five hundred dollars.          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Six per cent.                  |

## DOCUMENT 14.—No. 109—Continued.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. \$1,000 coarse quality; 2,000 yards cloth and satinet, value 75 cents per yard. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. Two thousand pounds of wool, domestic, value 37½ cents.                        |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                       | 11. About the same.                                                                |
| 15. Number of horses or other animals employed?                                                                                       | 15. None.                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. At the manufactory.                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 17. They do.                                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 19. None.                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 20. Some cash, some barter.                                                        |

The principal article of manufacture to two years past has been carpeting; the competition with foreign article has been such as to reduce the profits to about five per cent.

ISAAC HART.

| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Columbia county.                                                                             |
| 2. Kind or description of the manufactory?                                                                                            | 2. A woollen factory; water power.                                                                            |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$3,000.                                                                                                   |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$600.                                                                                                     |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Five per cent.                                                                                             |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Competition of foreign cloths, &c.                                                                         |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Two hundred yards cloth and 600 yards satinet; good quality cloth \$4 per yard; satinet 70 cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. About 600 lbs. wool, at 40 cents per lb.                                                                   |

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?             | 9. They sell at about the same prices as above.                                                        |
| 10. Number of men, women, and children employed, and average wages of each class?                                          | 10. Two men, one woman, two children; men \$12 per month, women \$6 per month, children \$3 per month. |
| 11. How many hours a day employed, and what portion of the year?                                                           | 11. Fourteen hours per day; 9 months per year.                                                         |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 12. Generally at the manufactory.                                                                      |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent? | 13. They do to a great extent.                                                                         |
| 14. Where are the manufactures consumed?                                                                                   | 14. In the neighborhood.                                                                               |
| 15. Whether any of the manufactures are exported to foreign countries? If so, where?                                       | 15. They are not.                                                                                      |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. For cash and country produce.                                                                      |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Only a few years in operation.                                                                     |

MARGARET MONTGOMERY.

## DOCUMENT 14.—No. 111.

*Wool and Cotton Factory, Erie County, West Pennsylvania.*

| QUESTIONS.                                                                                                                      | ANSWERS.                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                       | 1. Erie county, State of Pennsylvania.                                                                                                                                                                  |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                            | 2. Ninety spindles and one loom, attached to a common clothiers' shop; water power.                                                                                                                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                 | 4. Capital in ground, buildings, water power, and machinery, \$2,500.                                                                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                 | 5. The wool manufactured is principally furnished by others, and brought to the mill for manufacture. The annual amount of cloth, which is wholly or in part manufactured and finished, is about \$600. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 10. The materials are principally of American production; say about three-fourths.                                                                                                                      |
| 12. Number of men, women and children employed, and average wages of each class?                                                | The number of persons employed is two, the whole year; the amount of wages given is \$15 per month, each man.                                                                                           |
| 13. How many hours a day employed; and what portion of the year?                                                                |                                                                                                                                                                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?      | 17. Foreign wool does not enter into competition with the domestic wool here; but foreign cloths of a similar kind do enter into competition.                                                           |

## DOCUMENT 14.—No. 111—Continued.

| QUESTIONS.                                                                                                                                                                | ANSWERS.                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| 18. Where are the manufactures consumed?                                                                                                                                  | 18. The articles manufactured are consumed within the county.                             |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be? | 34. I do not think that any reduction of duties could be made under the market of cloths. |

GEORGE HILL.

## DOCUMENT 14.—No. 112.

*Woollen Manufactory, Erie County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Erie, Pennsylvania.                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen; water power.                  |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1831; individual.                      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Twenty hundred dollars.                |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages.                                                                                                                                                                                                      | 5. Seven hundred dollars.                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between, the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Less than five per cent.               |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. 5 per cent. better.                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Cloths and satinets, middling quality. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 4 men, \$15; 4 boys, \$4.             |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Three-quarters of the year.           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Home.                                 |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. Extensively.                          |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. No.                                   |

DOCUMENT 14.—No. 113.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Barter.                            |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?             | 21. Increase in materials 25 per cent. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. From 50 to 75 cents.               |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. Want of time prevents particulars. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Abandon business.                  |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Agriculture or mercantile.         |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profit even after a reduction of the import duties to 12½ per cent.?                                                                                                            | 31. Yes.                               |

JAMES INNIS.

DOCUMENT 14.—No. 113.

*Woollen Manufactory, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                                                |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Fayette county, Pennsylvania.                                        |
| 2. Kind or description of the manufactory?                                                      | 2. Woollen manufactory.                                                 |
| 3. Capital invested in ground and buildings?                                                    | 3. Two thousand dollars.                                                |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 4. Fifteen hundred dollars worth in wool and dye stuff.                 |
| 5. Annual rate of profit on the capital invested?                                               | 5. Not exceeding three hundred dollars.                                 |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                          | 6. Increase of tariff will increase profit; a decrease will destroy it. |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Two thousand yards of cassinet, cloth, flannel blankets.                                                 |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Three men and two children; wages for men, \$195 each per year; two children, 52 dollars each per year. |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Ten hours each day the year round.                                                                      |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory and its vicinity, and Pittsburgh.                                                    |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Cloths, cassinets, and blankets enter into competition.                                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the United States.                                                                                   |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The present rate of duty.                                                                               |

ELLIS STEVENSON.

*Report of James Willing's Woollen Manufactory, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Fayette county, Pennsylvania.                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Water power; woollen manufactory.                                |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1831.                                                            |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$3,000.                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$1,600.                                                         |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The capital borrowed, \$400 per annum; \$300 per annum of stock. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. \$4,000—coarse broadcloths and satinetts.                        |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                      | 12. 6 men at \$20 per month, and 4 girls at \$4 per month. |
| 13. How many hours a day employed, and what portion of the year.                                                                                                                                                                                                        | 13. 12 hours per day all the year.                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. 36 miles; Pittsburgh.                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. Pittsburgh.                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Cash; 3 and 6 months' credit.                          |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?              | 21. Decreased.                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. To abandon the business.                               |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                            | 39. \$15 per month.                                        |

The above is the statement of Redstone Factory. April 14, 1832.

JAMES WILLING.

*Report of Brackin and Rogers' Woollen Factory, Fayette County, Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                      |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Fayette county.                                                              |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                  | 2. Woollen factory, water and steam power.                                                    |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established in 1828; joint stock.                                                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. \$3,500.                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. \$3,100.                                                                                   |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                | 7. Decrease for profit in 1831; cause high prices of wool.                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. \$3,300, 1,600 broad cloths; 1,000 casinetts; 700 flannels; generally of the coarser kind. |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                         | 10. About \$1,723 worth of raw material domestic.                                          |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                      | 12. 7 men, \$15 per month; 3 boys, 75 cts. per week.                                       |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                        | 13. 12 hours, all the year.                                                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. Principally sold in the neighborhood of the factory.                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. Foreign articles of the first quality furnished lower than we can afford to make them. |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what? if bartered, for what?                                                                                                                                                     | 20. Principally bartered for raw materials and other produce.                              |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. If the business should get any worse than it now is, we should abandon it altogether.  |

AMITY MILLS FACTORY, April 16, 1832.

BRACKIN &amp; ROGERS.

*Woollen Manufactory, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Fayette county.                                                                                                                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Woollen manufactory; water power.                                                                                                               |
| 3. When established, and whether a joint stock concern?                                                                               | 3. 1830; a joint stock concern.                                                                                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. 9,000 dollars.                                                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 5. \$15,200 whole amount; one-half cash for wool, dye stuffs, labor, &c.; balance changed for goods, provisions, &c.                               |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 7. The profit depends upon the price of wool, and amount of foreign cloth brought in.                                                              |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                        | 8. From 10 to 25 per cent.                                                                                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 5,364 yards broadcloth from \$1 50 to \$5 50 per yd. \$12,532 41<br>6,577 yds. satinet from 60 cts. to 95 cts. per yard 4,558 31<br>\$17,090 71 |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | <p>10. 20,000 lbs. wool, the growth of this neighborhood, worth \$6,000 00</p> <p>Teasels and woad, domestic, 250 00</p> <p>Foreign products, 1,000 00</p> <p style="text-align: right;">\$7,250 00</p>                       |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. 18 men, averaging \$19 per month; 7 boys at \$8 50; 10 girls at \$6; superintendent and clerk at \$900 per annum.                                                                                                         |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                           | 13. About 11½ hours per day; 11 months in the year.                                                                                                                                                                           |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. \$18 per month in this county.                                                                                                                                                                                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. None.                                                                                                                                                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Market at Pittsburgh, 45 miles distant, and at Philadelphia, 300 miles.                                                                                                                                                   |
| 19. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In the country.                                                                                                                                                                                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. They are not exported to foreign countries?                                                                                                                                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Generally sold on a credit of 6 to 9 months abroad; but that sold at the manufactory is principally in exchange for produce of the farmer.                                                                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. The cost of the manufactured article has increased in the last year about twenty per cent. in wool, dye stuff, and oil; labor about the same as former years.                                                             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Broadcloths from \$1 50 to \$5 per yd.; flannels from 30 to 45 cents.; satinets from 55 cts. to \$1 40 per yard.                                                                                                          |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present protection is sufficient, if made effective by appraising foreign goods when brought into our parts, without any reference to foreign invoices.                                                               |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. We have as yet, declared no dividend, having a large stock on hand, but suppose our profits to be about 12½ per cent.; but if woollen goods continue to depreciate, as they are doing at this time, we shall surely lose. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Wool and dye stuffs, for the last year, was about 60 per cent. on the whole cost.                                                                                                                                         |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per ct., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                      | 29. It certainly would cause us to abandon the business.                                                                                                                                                                      |

## DOCUMENT 14.—No. 117.

*Woollen Manufactory, Green County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Clarksville, Green county, Pennsylvania.                                                                                                                                                                                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen factory; water power.                                                                                                                                                                                                |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. About the year 1812, and a joint stock concern.                                                                                                                                                                              |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. About 8,000 dollars.                                                                                                                                                                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. At this time a great part of the wool is worked on shares; some little purchased.                                                                                                                                            |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The original stockholders and manufacturers were broken up by carrying it on, and has been a dead loss since its erection.                                                                                                   |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Decreased by the British manufacturers flooding in after the peace, and, in some measure, by want of knowledge in carrying it on.                                                                                            |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Have no correct idea.                                                                                                                                                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. What has formerly been made annually we cannot tell. We manufacture annually about 5,000 lbs. wool, made into flannel, broadcloths, cassinets, &c.; say 2,000 yards broadcloth, 600 yards cassinet, and 1,000 yards flannel. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. There is 5,000 lbs. wool used, all domestic production.                                                                                                                                                                     |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. We are not prepared to give a correct answer.                                                                                                                                                                               |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. About 5 men, 5 women, and 8 children; little wages given; work done by the persons composing the company.                                                                                                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Ten hours per day; eight months in the year.                                                                                                                                                                                |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Do not know.                                                                                                                                                                                                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. None.                                                                                                                                                                                                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Sold at the factory, and at Pittsburgh, Pennsylvania.                                                                                                                                                                       |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. They do to considerable extent.                                                                                                                                                                                             |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Principally in the southwestern part of Pennsylvania.                                                                                                                                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. None.                                                                                                                                                                                                                       |

## DOCUMENT 14.—No. 117—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Part cash, part for wool, part credit of six months, and part produce.                                                                                                                                                                                                                                       |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. It has increased and decreased from a variety of causes, which we, with justice, cannot sufficiently define.                                                                                                                                                                                                 |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Former prices we cannot give. For the last four years our broadcloths have averaged us two dollars and fifty cents per yard; flannels, red, 33 to 45 cents per yard; cassinets 60 to 75 cents.                                                                                                               |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present duty, if collected, would be adequate to protection; and manufacturers of wool would flourish if there was stability in the tariff already imposed, whereby the capitalists could make investments which would be permanent, and not subject to fluctuation and continual changes in the system. |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. We can devise no plan for the collection of revenue better than the existing laws.                                                                                                                                                                                                                           |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. We are all workers. The profits maintain us. We have little to divide.                                                                                                                                                                                                                                       |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Not working altogether our own materials, we are not able to give correct answers to this query.                                                                                                                                                                                                             |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. We cannot ascertain.                                                                                                                                                                                                                                                                                         |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                                                                                                                                                                                                                                                                 |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. At the present duty, we can make out to live. If reduced to 12½ per cent., it is very doubtful; but we are acquainted with this business, and could do better at it than at other business at the present tariff.                                                                                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. We cannot tell.                                                                                                                                                                                                                                                                                              |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. We believe any other pursuit would be better.                                                                                                                                                                                                                                                                |

## DOCUMENT 14.—No. 118.

*Woollens Manufactory, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Huntingdon county.                                                                                                                                                                                           |
| 2. Kind or description of the manufactory?                                                                                                 | 2. 1 fulling apparatus and carding machine.                                                                                                                                                                                   |
| 3. Capital invested in ground and buildings?                                                                                               | 3. 2,000 dollars.                                                                                                                                                                                                             |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                           | 4. For dye stuffs, press papers, cards, soap and candles, \$200; that is the average amount of them. I have to give cash for all of the abovementioned articles, except soap and capital.                                     |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Clear 350 dollars annually.                                                                                                                                                                                                |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                      | 6. Because merchants opposing with imported goods.                                                                                                                                                                            |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Until 1821 I have manufactured 3,500 lbs. of wool annually. Manufacture cloth, flannel, blankets, linsey, cassinet, &c.; cloth from \$1 to \$2; cassinet from \$1 to \$2 25; flannel from 75 to 90 cents; linsey 90 cents. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Domestic, 3,500 lbs. at 40 cts. per lb.; foreign articles about \$100.                                                                                                                                                     |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. The cassinets I could buy 25 per cent cheaper than to manufacture them; cloth about the same rate; flannels and linsey the same.                                                                                           |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. I have but myself and a boy; cash too scarce to hire.                                                                                                                                                                     |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Sixteen hours; sometimes day and night; all the year.                                                                                                                                                                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. All home consumption.                                                                                                                                                                                                     |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                 | 13. They do, to a considerable extent, by the merchants and pedlars.                                                                                                                                                          |
| 14. Where are the manufactures consumed?                                                                                                   | 14. We are just struggling along; some will soon go to pieces.                                                                                                                                                                |
| 15. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                   | 15. None.                                                                                                                                                                                                                     |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Some little for cash; credit until they are willing to pay.                                                                                                                                                               |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. In 1817 cloth sold at \$3 per yard, and has gradually been on the decline since, as you will see above.                                                                                                                   |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Duty ought to be 75 or 80 cents to enable us to do business to the satisfaction of ourselves and others.                                                                                                                  |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Cleared 900 dollars since 1827.                                                                                                                                                                                           |
| 20. Amount of capital?                                                                                                                     | 20. 200 lbs. of wool is my capital; the above 3,500 is customers' work.                                                                                                                                                       |
| 21. Average rate of wages?                                                                                                                 | 21. Myself and apprentice do the work.                                                                                                                                                                                        |

*Woollen Manufactory, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Huntingdon county.                                                                                                           |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen; 1 fulling mill; 2 carding machines; 1 picker and shearing machine.                                                                |
| 3. Capital invested in ground and buildings?                                                                                               | 3. 4,000 dollars.                                                                                                                             |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. 400 dollars.                                                                                                                               |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 150 dollars, or 3½ per cent.                                                                                                               |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                      | 6. Decrease by reason of the scarcity of sheep, and plenty of imported cloths, and doubts of the duty being taken off.                        |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Manufacture annually out of fleece, 4,000 lbs. wool; coarse 3-4 yd. cloth and flannels; cloths \$1 25 to \$1 50; flannels 75 cents to \$1. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Dye stuffs, domestic materials, \$20; foreign, \$30.                                                                                       |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. 1 man; wages per month, \$12 and found.                                                                                                   |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 12 to 14 hours, employed all the year.                                                                                                    |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. All home consumption.                                                                                                                     |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Competition goes so far as to supply the cash customers at the stores, leaving the poorer class to trade with us.                         |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the immediate neighborhood.                                                                                                            |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                                                                                            |
| 16. Whether the manufactory is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Cash scarce; credit 12 months; barter wheat, rye, corn, flaxseed, tallow, &c. &c.                                                         |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. The factory just getting into operation fairly; been moving slowly, waiting for a fair breeze.                                            |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. From 30 to 40 per cent. ad valorem.                                                                                                       |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Not in operation so long.                                                                                                                 |
| 20. Amount of capital?                                                                                                                     | 20. 1,000 dollars.                                                                                                                            |
| 21. Average rate of wages?                                                                                                                 | 21. 18 to 20 dollars per month; to find themselves.                                                                                           |

THOMAS T. CBOMWELL.

ROXBILL WOOLLEN FACTORY, April 23, 1862.

## DOCUMENT 14.—No. 120.

*Woollens—Fulling, Carding, Spinning, &c. Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Huntingdon county.                                                                                                                                                                           |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen—one fulling mill, two card machines, one spinning machine of 40 spindles, one shearing machine.                                                                                                    |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Two thousand dollars.                                                                                                                                                                                      |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. One thousand two hundred and fifty dollars.                                                                                                                                                                |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Three hundred dollars, and greater than that in books to collect, and that will attend with considerable trouble.                                                                                          |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. The storekeepers impose upon us, and they are the cause of the decrease.                                                                                                                                   |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Manufacture out of the fleece worth \$200 worth coarse three quarter yard cloth and coarse cassinets and flannels: cloth from \$1.12½ to \$1.50; cassinets from 75¢ to \$1; flannels from 75 cents to \$1. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Including wool, wood, soap, &c. Foreign materials come at about \$50.                                                                                                                                      |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men at \$10 each per month.                                                                                                                                                                           |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Hours employed 12, work all days.                                                                                                                                                                         |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. All home consumption; and if made would not oppose us so with foreign as we could make and sell 20 times as much.                                                                                         |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                 | 13. Yes; the merchants bring in very nosies.                                                                                                                                                                  |
| 14. Where are the manufactures consumed?                                                                                                   | 14. None about here consumed, but are all struggling along at a poor rate.                                                                                                                                    |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. None exported.                                                                                                                                                                                            |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Some little cash we get from the road hands; we will not trust them. All the same as cash at home. Barter sometimes.                                                                                      |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. In 1812 cloth of similar kind sold \$2 and \$2.25. Manufactured no cash then; it is now as mentioned above, but a tendency to grow worse.                                                                 |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The duty on all the articles ought to be 70 or 80 per cent.                                                                                                                                               |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. In 1827 profits \$500, and the establishment not so large; in 1830 \$200, and establishment much larger.                                                                                                  |
| 20. Amount of capital?                                                                                                                     | 20. Look above.                                                                                                                                                                                               |
| 21. Average rate of wages?                                                                                                                 | 21. Two hundred and forty dollars.                                                                                                                                                                            |

WILLIAM GIBBONEY

Mr. Gibboney's supposition of the quantity of wool manufactured in this county's mills.

## DOCUMENT 14.—No. 121.

*Woolens—Fulling, Carding, and Manufacturing, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Frankstown township, Huntingdon county, Pennsylvania.                                                                       |
| 2. Kind or description of the manufactory?                                                                                            | 2. Fulling, carding, and manufacturing.                                                                                        |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$500 in machinery and \$300 in buildings.                                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$300 for materials and wages.                                                                                              |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. One hundred and ten dollars.                                                                                                |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. Cause of decrease.                                                                                                          |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. \$ 150 worth of broad cloth; \$ 100 worth of blankets; \$ 100 worth of carpet; \$ 300 worth of country fulling and carding. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Three men, three boys; \$ 400 for men, \$ 100 for boys.                                                                    |
| 11. How many hours a day employed, and at what portion of the year?                                                                   | 11. Eleven hours a day, and ten months a year.                                                                                 |
| 12. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                             | 12. We find market at home.                                                                                                    |
| 19. What has been the rate of your profits, annually, for the last three years?                                                       | 19. Rate of profit six hundred dollars.                                                                                        |

BENJAMIN S. MCKEWAN.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Antis township, Huntingdon county, Pennsylvania.               |
| 2. Kind or description of the manufactory?                                                                                            | 2. One fulling mill, with machinery for carding wool.             |
| 3. Capital invested in ground and buildings?                                                                                          | 3. One thousand five hundred dollars.                             |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Works customers' materials; has no hired hands.                |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. About five per cent.                                           |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. Has got worse these two years past, and don't know the reason. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Don't know to a certainty.                                     |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Twelve dollars' worth of foreign dye stuffs.                   |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. Not known.                                                     |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. One man, one woman, one boy; but no hirelings.                |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. The whole year, about 14 hours each day.                      |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Used in this settlement.                                      |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. About one-third foreign coarse cloth, satinets, and flannels. |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In this and the adjoining counties.                           |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None.                                                         |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Manufactured for pay.                                         |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Do not know.                                                  |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Not more than five per cent. a year.                          |
| 20. Amount of capital?                                                                                                                     | 20. About \$1,800.                                                |
| 21. Average rate of wages?                                                                                                                 | 21. Has no hired hands.                                           |

## DOCUMENT 14.—No. 123.

*William Richards' Wool Factory, Indiana County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Pennsylvania, Indiana county. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen factory; water power.          |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1824; owned individually.           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. About thirty-five hundred dollars.     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About eighteen hundred dollars.        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. From 8 to 12½ per cent.                |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                                                    | 7. Foreign goods having fallen in price, and wages something higher, has had a tendency to decrease the profits.                                                       |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                                                           | 8. It varies from 8 to 20 per cent.                                                                                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                    | 9. About 4000 yds. cassinets, average value 65 cts., per $\frac{1}{2}$ yd. wide; cloth \$1 25; flannels 33 cts.; blanketing, 1 yd. wide, \$1; baize, yd. wide, 40 cts. |
| 10. Quantity and value of different kinds of raw materials used? distinguishing between foreign products and domestic products?                                                                                                                                                                                                          | 10. Wool purchased in the surrounding country; price varies as per quality, from 28 to 45 cents per pound.                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                        | 12. 6 men, 2 women, and 4 children; average wages 38 per month and boarding.                                                                                           |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                         | 13. From 10 to 12 hours.                                                                                                                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                                                                                                                                                                                                                  | 16. At the factory and in the neighborhood.                                                                                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                               | 17. Foreign goods do come in competition.                                                                                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                 | 18. In the surrounding country.                                                                                                                                        |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                | 19. None exported.                                                                                                                                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                               | 20. Bartered for the raw material and produce, and part sold for cash, and a part on credit.                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                               | 21. The cost has varied but little, taking the average of the time; the raw material, labor, and provisions, all vibrate in price.                                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                               | 23. About thirty per cent.                                                                                                                                             |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                         | 24. Don't know.                                                                                                                                                        |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. From 10 to 15 per cent.; no joint stock.                                                                                                                           |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12 $\frac{1}{2}$ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                     | 29. If this reduction was made, the business would be unprofitable, and of course would have to be abandoned.                                                          |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12 $\frac{1}{2}$ per cent.?                                                                                                                                                               | 31. I think there are many others.                                                                                                                                     |

## DOCUMENT 14.—No. 124.

*A. Matthews' Wool Manufactory, Indiana County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                                                | 1. Indiana county, Pennsylvania.                                                                                                                                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                                                     | 2. Wool manufactory; water power.                                                                                                                                                               |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                                                  | 3. Established in 1813; by myself                                                                                                                                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                                                          | 4. About four thousand dollars.                                                                                                                                                                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                                                          | 5. Perhaps three hundred dollars.                                                                                                                                                               |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing the interest upon it, and the rate of profit upon that portion which is not borrowed?                                         | 6. The profits are very small, scarcely worth carrying on. No borrowed capital.                                                                                                                 |
| 7. Cause of the increase, (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                                                   | 7. Because the imported goods are <del>less</del> <sup>more</sup> than we can manufacture them, and <del>we</del> <sup>men's</sup> wages higher.                                                |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                    | 9. About \$3,000 in all. Cloth, $\frac{1}{2}$ yd. wide, \$1; cassinets do. 65 cts.; flannels do. 33 cts.; baizes, 1 yd. wide, 50 cts.; bedding 40 cts. per yard; blankets, broad, \$1 per yard. |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                                                          | 10. Wool, from 33 to 40 cents, purchased at home.                                                                                                                                               |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                        | 12. About 11: men 5, women 2, children 4.                                                                                                                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                         | Men's wages about \$16 per month, women \$4, children 12 $\frac{1}{2}$ cents per day.                                                                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                          | 13. About 10 hours, principally in the summer season.                                                                                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                | 15. One horse.                                                                                                                                                                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                               | 16. Principally at home.                                                                                                                                                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                               | 17. Foreign goods always have been lower than I could sell for cash.                                                                                                                            |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 21. Increased since 1830 about 14 per cent., and I believe it is in consequence of the tariff of 1828.                                                                                          |
| 29. If the duty upon the foreign manufac-                                                                                                                                                                                                                                                                                                | 25. About 12 $\frac{1}{2}$ per cent. No joint stock.                                                                                                                                            |
|                                                                                                                                                                                                                                                                                                                                          | 29. If foreign goods should be brought                                                                                                                                                          |

| QUESTIONS.                                                                                                                                                                                                                      | ANSWERS.                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| ture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | any lower, I am sure I could not make any profit.                                                         |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                   | 31. If I had the money I have expended in this business, I could make a great deal more in raising stock. |

*Woollen Manufactory, Juniata County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Juniata county.                                                                                                                    |
| 2. Kind or description of the manufactory?                                                                                            | 2. Woollen cloth and satinets.                                                                                                                      |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Five thousand dollars.                                                                                                                           |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$600 for materials; and \$500 for wages.                                                                                                        |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. One thousand yards annually; 700 yards coarse cloth, and 300 yards satinets. Average on cloth 80 cents per yard, and satinets 75 cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. One thousand lbs. wool, value \$600—domestic.                                                                                                    |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Men, 2; women, 1; children, 5.                                                                                                                  |
| 11. How many hours a day employed? and what portion of the year?                                                                      | 11. Eight hours per day; six months of the year.                                                                                                    |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. In the vicinity.                                                                                                                                |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 13. Foreign articles do enter into competition almost equivalent to the extinguishment of the domestic one.                                         |
| 14. Where are the manufactures consumed?                                                                                              | 14. In the vicinity.                                                                                                                                |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. None exported.                                                                                                                                  |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Bartered for raw material and country produce.                                                                                                  |
| 20. Amount of capital?                                                                                                                | 20. From six to seven hundred dollars.                                                                                                              |
| 21. Average rate of wages?                                                                                                            | 21. Average for all the hands \$10 per month.                                                                                                       |

JOSEPH SCHOFIELD, *Manufactory*

## DOCUMENT 14.—No. 126.

*Mr. William Rogers' Woollen Manufactory, Lycoming County, Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. State of Pennsylvania; Lycoming county?                                                                                         |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen factory; water power.                                                                                                   |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$3,000.                                                                                                                        |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$1,500.                                                                                                                        |
| 5. Annual rate of profit on capital invested?                                                                                              | 5. 8 per cent. per annum.                                                                                                          |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Duty on imports increased, increases our profits; and decreased, decreases our profits.                                         |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. \$2,000 annually; 1,450 yards satinets at 68½ cents per yard, at an average; 417 yards broadcloth, averaging \$2 40 per yard.   |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Domestic products; 2,500 lbs. wool at 30 cents per lb.; 100 lbs. cotton warps at 35 cents per lb. Foreign dye drugs, 1,300 lbs. |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. 1 man at \$25 per month; 2 boys at \$4 per month; 2 women at \$8 per month.                                                    |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 12 hours per day; 8 months in the year.                                                                                        |
| 12. Whether the manufacturer finds a market at the manufactory? If not, how far they are sent to a market?                                 | 12. Sold in this and joining counties, within 40 miles of the factory.                                                             |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Fine cloth enters into a very great competition; so great that fine cannot be made.                                            |
| 14. Where are the manufactures consumed?                                                                                                   | 14. Within 40 miles of the factory.                                                                                                |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not exported.                                                                                                                  |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. ½ for cash, ½ for iron, ½ for wood, ½ for dye stuffs and groceries.                                                            |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Satinets averaging 68½ cts. per yard; broadcloth, \$2 40 per yard.                                                             |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. 50 per cent. on fine cloths.                                                                                                   |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. 8 per cent per annum.                                                                                                          |
| 20. Amount of capital?                                                                                                                     | 20. \$2,500.                                                                                                                       |
| 21. Average rate of wages?                                                                                                                 | 21. \$588 per annum.                                                                                                               |

## DOCUMENT 14.—No. 127.

*Samuel Rogers's Woollen Factory, Lycoming County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. State of Pennsylvania, Lycoming county.                                                                                                                                   |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen cloths and satinets; water power.                                                                                                                                 |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Nine thousand dollars.                                                                                                                                                    |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$4,924; establishment capable of using \$20,000 to a good advantage.                                                                                                     |
| 5. Annual rate of profit on capital invested?                                                                                              | 5. Eight per cent. per annum.                                                                                                                                                |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Duty increased on imports increases our profits; and decreased it decreases our profits.                                                                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Established in 1818; manufactured annually \$6,080; 6666 yards satinets, at an average of 68½ cents per yard; 722 yards broad cloth, at an average of 208 cents per yard. |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?             | 8. Domestic, 10,000 lbs. wool, at 30 cents; 1,250 lbs. warps, at 35 cents, foreign dye drugs, 2,500 lbs.                                                                     |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. Six men at \$25 per month; four girls at \$8 per month; five boys at \$4 per month.                                                                                      |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 12 hours per day the year round.                                                                                                                                         |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Sold in the adjoining counties, within forty miles of the factory.                                                                                                       |
| 13. Whether foreign articles of the like kinds enter into competition at such place of sale, and to what extent?                           | 13. Imported fine cloth is sold near this so low that we cannot make fine cloth for sale.                                                                                    |
| 14. Where are the manufactures consumed?                                                                                                   | 14. Consumed within forty miles of the factory.                                                                                                                              |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not exported.                                                                                                                                                            |
| 16. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                | 16. One-third for cash at three months' credit; one-third for wool; one-sixth for iron and domestic products; and one-sixth for imported groceries and dye drugs.            |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Satinets, average 68½ cents per yard; broad cloths, average 208 cents per yard.                                                                                          |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. 50 per cent. on imports is necessary to enable the manufacturer to compete with foreigners in the home market.                                                           |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Eight per cent., annually, on the whole capital.                                                                                                                         |
| 20. Amount of capital?                                                                                                                     | 20. Eleven thousand five hundred dollars.                                                                                                                                    |
| 21. Average rate of wages?                                                                                                                 | 21. Two thousand four hundred and twenty-four dollars.                                                                                                                       |

## DOCUMENT 14.—No. 128.

*Messrs. Rich & McCormick's Woollen Factory, Lycoming County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Pennsylvania, Lycoming county.                                                                                                                                                                                                                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen manufactory; water power.                                                                                                                                                                                                                           |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1830; a joint stock concern.                                                                                                                                                                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Capital invested \$9,000.                                                                                                                                                                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Five thousand dollars.                                                                                                                                                                                                                                      |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. A joint concern, and no dividends have been made since the commencement.                                                                                                                                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Rolls 5,000 lbs.; yarn 1,000 lbs.; country fulling 4,000 yards, made for farmers of their own wool; 4,000 yards manufactured of our wool; 1,000 yards broad cloth, at \$2 50 per yard; 3,000 yards satinete, at 70 cents; 1,000 yards flannel, at 60 cents. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 4,500 lbs. wool, at 56 cents per lb.; domestic and foreign dye drugs, 2,500 lbs.                                                                                                                                                                           |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. 12 men at \$20 per month; two women at \$6 per month; and six boys at \$9 per month.                                                                                                                                                                       |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours per day, and 10 months in the year.                                                                                                                                                                                                               |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Two horses.                                                                                                                                                                                                                                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Sold at the factory.                                                                                                                                                                                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In Lycoming and Centre counties.                                                                                                                                                                                                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. Not exported.                                                                                                                                                                                                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                                                          | 20. Sold for cash at six months' credit, and bartered for flour, meat, and bar iron, &c.                                                                                                                                                                       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. Broad cloth averaging \$2 50 cents, satinete 70 cents, and flannel 60 cents, per yard each.                                                                                                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                              | 29. Would abandon the business.                                                                                                                                                                                                                                |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                       | 30. Buying land.                                                                                                                                                                                                                                               |

| QUESTIONS.                                                                      | ANSWERS.                                                                  |
|---------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 19. What has been the rate of your profits, annually, for the last three years? | 19. But one year established; profits on capital invested seven per cent. |
| 20. Amount of capital?                                                          | 20. \$ 4,565.                                                             |
| 21. Average rate of wages?                                                      | 21. Average rate per month fifteen dollars and a half.                    |

## DOCUMENT 14.—No. 130.

*Peter Blackwell's Woollen Factory, Lycoming County, West Pennsylvania.*

| QUESTIONS.                                                                                                                             | ANSWERS.                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                              | 1. State of Pennsylvania, Lycoming county.                                                                                                                                                                                     |
| 2. Kind or description of the manufactory?                                                                                             | 2. Woollen factory; water power.                                                                                                                                                                                               |
| 3. Capital invested in ground and buildings?                                                                                           | 3. Two thousand five hundred dollars.                                                                                                                                                                                          |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                       | 4. Two thousand and fifty-four dollars.                                                                                                                                                                                        |
| 5. Annual rate of profit on the capital invested?                                                                                      | 5. Six per cent.                                                                                                                                                                                                               |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                | 6. Duty increased on imports increases our profits, and it decreased decreases our profits.                                                                                                                                    |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value, of each kind? | 7. 1,300 yards satinnet at 62½ cents per yard; 500 yards cloth at \$1 12½ per yard; 200 yards flannel at 70 cents per yard; 200 yards blanketing at 87½ cents per yard; country filling 2,000 yards; 4,000 pounds wool carded. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?         | 8. 1,825 lbs. wool at 53 cents per pound, domestic; 1,238 pounds foreign dye drugs.                                                                                                                                            |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                         | 9. Imported from Europe casinet the same quality at 50 cts. per yard; cloth, flannels and blankets in proportion.                                                                                                              |
| 10. Number of men, women, and children, employed, and average wages of each class?                                                     | 10. Five men at \$20 per month; three boys \$9 per month; one woman at \$6 per month.                                                                                                                                          |
| 11. How many hours a day employed; and what portion of the year?                                                                       | 11. Twelve hours in the day, and nine months in the year.                                                                                                                                                                      |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                              | 12. A part of the manufactures sold at the factory, and the other part sent to Philadelphia, 212 miles.                                                                                                                        |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?             | 13. They do enter into competition, so that superfine cloths cannot be made.                                                                                                                                                   |
| 14. Where are the manufactures consumed?                                                                                               | 14. The part sold at the factory is consumed in the county; the part sold at market in the United States.                                                                                                                      |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                              | 15. Not exported.                                                                                                                                                                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?            | 16. The part sold at the factory for labor, meat, and flour, and that sent to market for cash.                                                                                                                                 |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 17. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                         | 17. Satinet 62½ cents per yard; cloth \$1 12½ per yard; blankets 87½ cents per yard; flannel 70 cents per yard. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. On coarse cloths 50 per cent.; on fine 55 per cent.                                                         |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. But one year established; profits six per cent. on capital invested.                                        |
| 20. Amount of capital?                                                                                                                     | 20. \$ 4,554.                                                                                                   |
| 21. Average rate of wages?                                                                                                                 | 21. \$ 1,215 per year.                                                                                          |

## DOCUMENT 14.—No. 131.

*R. and J. Holgate's Woollen Factory, Luzerne County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufacture is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Luzerne county.                                                                                                                                                                                       |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen factory; water power; Toby' creek.                                                                                                                                                                          |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1822; joint stock concern.                                                                                                                                                                                       |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Eight thousand dollars.                                                                                                                                                                                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Three thousand dollars.                                                                                                                                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About four per cent.                                                                                                                                                                                                |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. An increase last year, perhaps in consequence of the tariff.                                                                                                                                                        |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From six to twenty per cent.                                                                                                                                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About 2,000 yds. of cloth, satinet, and flannel: ¾ yd. cloth at from 62 cents to \$1 50 per yard; satinet from 62 to 125 cents per yard; flannel from 37 to 62 cents.                                               |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. About 2,000 lbs. wool and cotton yarn: wool 45 cents per lb., cotton yarn 37½ cents per lb.                                                                                                                        |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. The last year they have sold about as stated above, but before that they undersold us 25 per cent.                                                                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 3 men, at \$15 per month; 1 at \$20 per month; 3 boys, at \$6 per month; 3 women, at \$12 per month, weavers. These hands are employed a good part of their time in fulling and dressing cloth for country custom. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Ten hours per day; 10 months.                                                                                                     |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. About the same, excepting women whose wages are generally lower.                                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. One horse.                                                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Last year a market at the factory; other years sent to Philadelphia; 120 miles.                                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. Last year we were able to compete with a very small profit, but other years foreign goods were sold 25 per cent. lower than ours. |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. At Philadelphia, generally.                                                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sold at a credit of six months' generally.                                                                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. No material change.                                                                                                               |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Some small variations from the prices above.                                                                                      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. An increase of 10 per cent. ad valorem.                                                                                           |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. About four or five per cent.                                                                                                      |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Raw materials about 50 cents, labor about 50 cents, profits 6½ cents.                                                             |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. About \$400 agricultural productions.                                                                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Quit it immediately. We could not manufacture at reduced prices.                                                                  |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Perhaps in farming; but the greater part of our capital would be lost.                                                            |

| QUESTIONS.                                                                                                                                                               | ANSWERS.                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?             | 31. Yes, a number.                                                                     |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent; and how gradual the reduction should be? | 34. It does not yield 6 per cent now.                                                  |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                              | 37. A little more encouragement by Government, and a sufficiency will be manufactured. |

R. &amp; J. HOLGATE.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Luzerne county, Pennsylvania.                                                                                                                                                                                                                                            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollens, satinets, and cassimeres the past year; water power.                                                                                                                                                                                                           |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1823; joint stock.                                                                                                                                                                                                                                                       |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$6,000.                                                                                                                                                                                                                                                                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$4,750.                                                                                                                                                                                                                                                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. 4 and 5 per cent. on capital borrowed; a loss the past year of 1 or 2 per cent.; consider it a losing business the last year on account of the high price of wool and the present low price of goods: they cannot be sold for cash without a great sacrifice at present. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Price of goods in the cities; and that is governed by the quantity in market, and facility of procuring cash.                                                                                                                                                            |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From 6 to 20 per cent.                                                                                                                                                                                                                                                   |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. The past year 2,400 yards cassimere; 4,200 yards satinets; cassimere, average \$1 25; satinets sent to Philadelphia, from 41½ to 50; sold to country merchants from 50 to 90 cassimere; cassimere to country merchants \$1 25 to \$1 50.                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Dye stuffs, \$250; satinet warps, \$200; oil, \$100; soap, 75; 200 cords wood, \$125; black oak and white maple bark, quantity uncertain, procured near the factory; supposed cost \$150.                                                                               |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. Not sufficiently informed to give a correct answer.                                                                                                                                                                                                                           |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. 10 men, \$18 per month, including board; 3 women, \$2 per week, including board; 4 children, average cost, \$1 75 per week.                                                                                                                                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. 14 in summer, and 12 in winter.                                                                                                                                                                                                                                               |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Farmers, \$10 per month; mechanics, of other trades, \$15 to \$25; women, from \$1 50 to \$1 75, including board; children, from \$2 to \$4 per month, and boarded.                                                                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. 1 horse; about \$100 for teaming besides.                                                                                                                                                                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. A part sold at the factory; the greater part sold in this and Susquehannah counties; some part sent to Philadelphia: all sent there afford a loss.                                                                                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Those sold in the two counties mentioned above consumed there; those sent to the city not known where consumed.                                                                                                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. See answer to above.                                                                                                                                                                                                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sometimes for cash, when compelled to raise cash, but most generally at a loss; the greater part bartered for wool and merchandise for the workmen, and materials for the factory; on a credit of 6 months and a year.                                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. Satinet has decreased with us owing to our improvements, and procuring better warps; other goods very much the same; we believe if we could avail ourselves with the machinery, in the perfect manner in which it is used at the east, it would diminish the cost materially. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Satinets from 50 to \$1 50; other goods from 75 cts. to \$2 50.                                                                                                                                                                                                               |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Believe the duties ought not to be reduced; large manufacturing establishments can decide this question best, as we do not believe we can compete with them in our present situation.                                                                                         |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. It is a joint stock company; no dividends have been made for 7 years; profits not exactly known; the property has in a measure created itself, and the most that is available is converted into improvements.                                                                 |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Raw material about 3-7; labour 3-7 1-7 profits of capital.                                                                                                                                                                                                                    |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. Pork, beef, and grain, \$335; other domestic productions, \$400.                                                                                                                           |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. The manager of the firm is one of the owners, and he would rejoice to quit it with present rate of duties: would not think of continuing longer if the duties are reduced to 12½ per cent. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. The capital would lose more than half its present value if the owners started no business so much needed in the country as this the capital would be converted to.                         |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                             | 31. Hardly any pursuit but what we should prefer, but think we should choose agricultural.                                                                                                     |

STERLING &amp; PARKER.

## DOCUMENT 14.—No. 133.

*Truman C. Sandford's Woollen Manufactory, Sandy Lake, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Sandy Lake township, Mercer county, Pennsylvania.                                                                                                              |
| 2. Kind or description of the manufactory?                                                                                            | 2. Woollen manufactory of cloth, blankets, &c.                                                                                                                    |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$1,000.                                                                                                                                                       |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$250.                                                                                                                                                         |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. 12½ per cent.                                                                                                                                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. About 2,000 yards; coarse cloths, flannels, and blankets; of coarse cloths, 1,000 yards, worth \$1 per yard; of flannels, 750 yards, worth 62½ cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Dye stuffs, foreign, about \$30; domestic, about \$8.                                                                                                          |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. Two men, one boy; for the men \$75 each, for the boy \$50.                                                                                                    |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. 14 hours, 6 months.                                                                                                                                           |
| 14. Where are the manufactures consumed?                                                                                              | 14. In the vicinity.                                                                                                                                              |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                             |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen.                                                                                                                                 |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$1,000.                                                                                                                                 |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                           | 4. \$275.                                                                                                                                   |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 25 per cent.                                                                                                                             |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About 2,000 yards; of which 1,000 are coarse cloths, worth \$1 per yard, and 1,000 of flannels and blanketing, worth 62½ cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$30 worth of foreign dye stuff, and about \$10 worth of domestic.                                                                 |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. Two men at \$20 per month.                                                                                                              |
| 11. How many hours a day employed, and what portion of the year.                                                                           | 11. 14 hours, six months.                                                                                                                   |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity.                                                                                                                        |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                                                                                          |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. There ought to be a high duty.                                                                                                          |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                                                                                         |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen.                                                                                                                                                                                             |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$1,000.                                                                                                                                                                                             |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$200.                                                                                                                                                                                               |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 20 per cent.                                                                                                                                                                                         |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                     | 6. A rise in the price of wool occasioned a decrease of profit.                                                                                                                                         |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About 2,000 yards of coarse cloths, flannels and blankets; of coarse cloths about 1,000 yards, worth \$1 per yard; of flannels 750 yards, of blankets 250 yards; each kind worth 62½ cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$35 of foreign dye stuffs; \$15 of domestic.                                                                                                                                                  |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. One man at \$25 per month.                                                                                                                                                                          |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 14 hours, six months.                                                                                                                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. They are consumed in the vicinity of the manufactory.                                                                                                                                               |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                                                                                                        |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 20 per cent.                                                                                                                                                                                        |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                     | 6. A rise in wool occasioned a decrease in profit.                                                                                                                                                     |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About 2,000 yards of coarse cloth, flannels and blankets; of coarse cloths about 1,000 yards, worth \$1 per yard; of flannels 750 yards, of blankets 250 yards, each kind worth 62½ cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$35 worth of foreign dye stuffs, \$15 of domestic.                                                                                                                                           |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. One man at \$25 per month.                                                                                                                                                                         |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 14 hours, six months.                                                                                                                                                                              |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. They are consumed in the vicinity of the manufactory.                                                                                                                                              |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                                                                                                       |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mercer county, Pennsylvania.                                                                                                                                                                                                   |
| 2. Kind or description of the manufactory?                                                                                            | 2. Woollen, manufacture of cloth, blankets, &c.                                                                                                                                                                                   |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Nine hundred and fifty dollars.                                                                                                                                                                                                |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Three hundred dollars.                                                                                                                                                                                                         |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Twelve and a half per cent.                                                                                                                                                                                                    |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Coarse cloth, flannels, and blankets, about 3000 yards; 2500 yards cloth worth \$1, and 500 yards flannel, &c. 62½, 312 50, making \$ 2812 50 manufactured for the country. Dye stuffs, foreign products, \$40, domestic \$10. |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?        | 8. No raw material; that is furnished by those for whom we do the work.                                                                                                                                                           |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. 1 man and 2 boys; \$100 for the man, and \$50 for the boys each. |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 6 months in the year; 14 hours per day.                          |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. In the vicinity.                                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity.                                                 |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                   |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. There ought to be a high duty.                                   |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Twelve and a half per cent.                                      |
| 21. Average rate of wages?                                                                                                                 | 21. About \$75 average.                                              |

## DOCUMENT 14.—No. 138.

*Mrs. Jane Ormsby's Woollen Factory, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mercer county, Pennsylvania.                                                                                      |
| 2. Kind or description of the manufactory?                                                                                            | 2. Woollen.                                                                                                          |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$300.                                                                                                            |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$700.                                                                                                            |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. 25 per cent.                                                                                                      |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                | 6. Somewhat increased—supposed to be in consequence of the present rate of duties on cloths.                         |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. About 2,000 yards dressed cloth at \$1, \$1,500; flannels, &c., 500 yards, worth 375,<br>\$1,875.                 |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. 5,000 lbs. domestic wool carded, worth 40 cents. \$2,000; foreign dye stuffs used, \$40; domestic copperas, \$10. |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. 2 men, \$1.50 each.                                                                                              |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. 12 hours.                                                                                                        |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. All consumed in the vicinity.                                                                                    |
| 14. Where are the manufactures consumed?                                                                                              | 14. In the vicinity.                                                                                                 |

## DOCUMENT 14.—No. 138.—Continued.

| QUESTIONS.                                                                                           | ANSWERS.                                                                   |
|------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?             | 15. None exported.                                                         |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment? | 17. $\frac{1}{2}$ cloth at \$1; flannels, &c., at 50 to 62 $\frac{1}{2}$ . |
| 19. What has been the rate of your profits, annually, for the last three years?                      | 19. 25 per cent.                                                           |
| 20. Amount of capital?                                                                               | 20. \$800.                                                                 |
| 21. Average rate of wages.                                                                           | 21. \$150.                                                                 |

## DOCUMENT 14.—No. 139.

*Messrs. Wilson's Woollen Factory, Nashanock, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                                                        |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen.                                                                                                                                                            |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$1,500.                                                                                                                                                            |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$300.                                                                                                                                                              |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 20 per cent.                                                                                                                                                        |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                     | 6. A rise in the price of wool in 1831 made a decrease.                                                                                                                |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About 5,000 yards; 2,500 of which was cloth, worth \$1 per yard; 500 yards worth \$2 per yard; 2,000 blanketing and flannel, worth 62 $\frac{1}{2}$ cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$70 of foreign dye stuffs—about \$30 of domestic.                                                                                                            |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. 2 men; each man \$175 per year.                                                                                                                                    |
| 11. How many hours a day employed? and what portion of the year?                                                                           | 11. 10 hours, the whole year.                                                                                                                                          |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                                                                                |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                                                                                |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not exported.                                                                                                                                                      |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                                                                       |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. \$1,900.                                                                                                                                                           |

## DOCUMENT 14.—No. 140.

*John C. Robinson's Woollen Manufactory, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                            |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen.                                                                                                                                |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Three hundred dollars.                                                                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Six hundred dollars.                                                                                                                    |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Twenty-five per cent.                                                                                                                   |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Some increase, supposed in consequence of the protecting duty.                                                                          |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. 4,500 yards, 3,000 of which cloth, and 1,500 flannels, &c.; the cloth worth \$1 per yard, the flannels 50 to 62½ cents; amount \$3,900. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Foreign dye stuffs \$40; domestic dye stuffs \$10.                                                                                      |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. One man, one boy; the man \$150, the boy \$60.                                                                                         |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Twelve hours; six months in the year.                                                                                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Consumed in the vicinity.                                                                                                              |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity.                                                                                                                       |
| 15. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                   | 15. None exported.                                                                                                                         |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The duties should not be reduced.                                                                                                      |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Twenty-five per cent.                                                                                                                  |
| 20. Amount of capital?                                                                                                                     | 20. Seven hundred dollars.                                                                                                                 |
| 21. Average rate of wages?                                                                                                                 | 21. One hundred and fifty dollars.                                                                                                         |

## DOCUMENT 14.—No. 141.

*James Martin's Slippery Rock Woollen Factory, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                        |
|-------------------------------------------------------------------------------------------------|---------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Mercer county, Pennsylvania. |
| 2. Kind or description of the manufactory?                                                      | 2. Woollen.                     |
| 3. Capital invested in ground and buildings?                                                    | 3. Nine hundred dollars.        |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 4. Two hundred dollars.         |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Twenty-five per cent.                                                                                                                                                                   |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About 2,000 yards in the whole; of which about 1,000 yards are coarse cloths worth 75¢ per yard; 750 yards of flannel, and 250 yards of blanketing; each kind worth 62½ cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$35 worth of foreign dye stuffs; \$15 of domestic.                                                                                                                               |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. One man at \$25 per month.                                                                                                                                                             |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Fourteen hours, six months.                                                                                                                                                            |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. They are consumed in the neighborhood of the manufactory.                                                                                                                              |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                                                                                           |

## DOCUMENT 14.—No. 142.

*R. & J. McFarlane's Woollen Manufactory, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mercer county, Pennsylvania.                                                                                       |
| 2. Kind or description of the manufactory?                                                                                            | 2. Cloth manufactory.                                                                                                 |
| 3. Capital invested in ground and buildings?                                                                                          | 3. One thousand dollars.                                                                                              |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 4. One thousand dollars.                                                                                              |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. A rise in the price of wool in 1831 caused a considerable decrease in profit.                                      |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Satinets, worth from \$1 to \$1.50 per yard; coarse cloths, worth \$1 per yard; blankets, worth 75 cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. About \$500 worth of wool and cotton domestic, and \$50 worth of foreign dyes and stuffs.                          |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Four men, two boys; the men at \$11 per month each; the boys at \$50 each per year.                               |
| 11. How many hours a day employed; and what portion of the year?                                                                      | 11. Ten hours a day, the whole year.                                                                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Part at the manufactory; and part carried about 50 miles.                                                         |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 13. They do, and to a considerable extent.                                                                            |

## DOCUMENT 14.—No. 142.—Continued.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                                                  |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The present duty is not sufficient to give full protection: the tariff ought to be made higher. |
| 20. Amount of capital?                                                                                                                     | 20. About three thousand dollars.                                                                   |

## DOCUMENT 14.—No. 143.

*Thomas Miller's Woollen Manufactory, Mahoning, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                                                      |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen.                                                                                                                                                          |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$1,000.                                                                                                                                                          |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$300.                                                                                                                                                            |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 20 per cent.                                                                                                                                                      |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                     | 6. A rise in the price of wool in 1831, made a decrease of profit.                                                                                                   |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About 8,000 yards; 2,500 of which was cloth, worth \$1 per yard; 500 yards, worth \$2 per yard; and 2,000 yards blanketing and flannel, worth 62½ cents per yard. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$70 of foreign dye stuffs; about \$20 of domestic.                                                                                                         |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men; each man \$175 per year.                                                                                                                                |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 10 hours, the whole year.                                                                                                                                        |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                                                                              |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                                                                              |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not exported.                                                                                                                                                    |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                                                                     |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. \$1,400.                                                                                                                                                         |

## DOCUMENT 14.—No. 144.

*Samuel M. Sively's Fulling Factory, and Carding, Weaving and Spinning Machines, Mifflin County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mifflin county, Pennsylvania.                                                                                                                                                         |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Fulling mill, carding machine, and weaving and spinning machines; water power; joint stock concern.<br>3. \$1,500.                                                                    |
| 3. Capital invested in ground and buildings?                                                                                               | 4. Materials \$300; \$200 for the purchase of materials; three hands at \$10 per month.                                                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 5. About \$200; a good part of that book accounts.                                                                                                                                       |
| 5. Annual rate of profit on the capital invested?                                                                                          | 6. Decrease caused by the merchants opposing, and also the pedlars.                                                                                                                      |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 7. \$3,600 worth, annually, of cloths, blanketing, cassinets, &c.; cloth is of that quality that brings us about \$1 per yard; blanketing about 50 cents; cassinets 62½ cents, per yard. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 8. Foreign materials about \$25; wool, 500 lbs. at 40 cents.                                                                                                                             |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 10. Three men, and no women; employment for about 10 months, at \$10 per month per hand.                                                                                                 |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 11. Employed about 12 hours, 10 months.                                                                                                                                                  |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 12. All home consumption.                                                                                                                                                                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 13. They do, very considerably, in some of the articles, viz. flannels and blanketing.                                                                                                   |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 14. At home.                                                                                                                                                                             |
| 14. Where are the manufactures consumed?                                                                                                   | 15. Not any.                                                                                                                                                                             |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 16. Sell something like \$40 worth for cash, the rest credit; the credit unlimited; if bartered, for wheat.                                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                | 17. Refer to question 7.                                                                                                                                                                 |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 18. About 50 per cent.                                                                                                                                                                   |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 19. Vide above.                                                                                                                                                                          |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 20. Look above.                                                                                                                                                                          |
| 20. Amount of capital?                                                                                                                     | 21. Ditto.                                                                                                                                                                               |
| 21. Average rate of wages?                                                                                                                 |                                                                                                                                                                                          |

SAMUEL M. SIVELY.

## DOCUMENT 14.—No. 145.

*Alexander Gibbons, jr.'s Fulling Mill and Shearing Machine, Mifflin County, West Penn'a.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mifflin county, State of Pennsylvania.                                                                                                                                              |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Water power; fulling mill; shearing machine.                                                                                                                                        |
| 3. Capital invested in ground and buildings?                                                                                               | 3. The whole of my property I estimate at \$4,000. The fulling mill and lot at about \$2,000.                                                                                          |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. I only manufacture from the loom; and I work up 5,000 lbs., at 40 cents per lb.; employ two hands for six months, at \$10 per month.                                                |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Profit \$400, principally all to collect.                                                                                                                                           |
| 6. Causes of the increase (or decrease, as the case may be) of profit?                                                                     | 6. Decrease is caused by the storekeepers, being enabled to oppose us on account of their getting the goods so cheap.                                                                  |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Including dye stuffs, wood, soap, &c. \$200; foreign materials about \$75.                                                                                                          |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. I suppose they could sell at 75 cents per yard such as we sell at \$1.                                                                                                              |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men, at \$10 each per month.                                                                                                                                                   |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 12 hours, six months in the year.                                                                                                                                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. All home consumption. If merchants could not oppose us with foreign goods, we would do much better business.                                                                       |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                 | 13. The merchants do not bring narrow cloth, but they bring substitutes, such as cassinets and cassimeres, and broad cloth.                                                            |
| 14. Where are the manufactures consumed?                                                                                                   | 14. None consumed, but they have hard work to get along; the \$400 clear are book accounts; we have not \$20 in cash, clear, at the end of the year—I mean exclusive of book accounts. |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. None.                                                                                                                                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. I manufacture for the people: they find the materials, all but the dye stuffs and soap; but I get some little cash for my work.                                                    |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. I do not sell; I just work for those that bring cloth from the loom.                                                                                                               |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. About 50 per cent. duty would enable us to go on.                                                                                                                                  |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. About \$400 yearly, but I could not raise \$200 at the present, with all that clear gain credit.                                                                                   |
| 20. Amount of capital?                                                                                                                     | 20. } Look at questions 3 and 4.                                                                                                                                                       |
| 21. Average rate of wages?                                                                                                                 | 21. }                                                                                                                                                                                  |

ALEXANDER GIBBONS, Jr.

## DOCUMENT 14.—No. 146.

*Fulling Machine, Mifflin County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mifflin county, Pennsylvania.                                                                                                                                                |
| 2. Kind or description of the manufactory?                                                                                                 | 2. One fulling machine.                                                                                                                                                         |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$1,500, excluding the farm, worth about 1,050 dollars.                                                                                                                      |
| 5. Annual rate of profit on capital invested?                                                                                              | 5. Profit \$37 annually.                                                                                                                                                        |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                      | 6. Decreased, caused by the number of factories being greater.                                                                                                                  |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?             | 8. Foreign articles \$12 worth.                                                                                                                                                 |
| 10. Number of men, women, and children, employed, and average wages of each class?                                                         | 10. Not any person but myself is employ.                                                                                                                                        |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 12 hours per day; work about three months per year.                                                                                                                         |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. All home consumption.                                                                                                                                                       |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. They do to that extent that causes me almost to abandon my business.                                                                                                        |
| 14. Where are the manufactures consumed?                                                                                                   | 14. At home.                                                                                                                                                                    |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. Not any.                                                                                                                                                                    |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. It is just given to me to dress, and then the people that bring me materials for the articles manufactured. I credit for my work generally.                                 |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. About 60 per cent.                                                                                                                                                          |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. My trifling profit exists principally in book account, and therefore I cannot tell at present what my clear gain would be, but I do not suppose that it would overrun \$37. |

G. STRODE.

## DOCUMENT 14.—No. 146.—Part 2.

*Fulling Mill and Carding Machine, Mifflin County, West Pennsylvania.*

| QUESTIONS.                                                | ANSWERS.                                                         |
|-----------------------------------------------------------|------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Mifflin county, Pennsylvania.                                 |
| 2. Kind or description of the manufactory?                | 2. Fulling mill, carding machine, shearing machine; water power. |
| 3. Capital invested in ground and buildings?              | 3. The farm and buildings \$2,000                                |

[DOCUMENT 14.—No. 146—Continued.]

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. The carding machine and fulling mill \$600, cash for the purchase of materials \$20, for the payment of wages none.                                                                                                                                                                                                                                                  |
| 5. Annual rate of profit on capital invested?                                                                                              | 5. The fulling mill clears annually \$150; I do not know, for the rest of the capital, what the profit is.                                                                                                                                                                                                                                                              |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                     | 6. Competition and opposition by the merchants are the causes of our decrease of profit.                                                                                                                                                                                                                                                                                |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. We have, previous to this year, manufactured something like \$4,000 worth, (that is about the value of the articles when finished,) but this year we do not expect to do so much business. Manufacture $\frac{3}{4}$ yd. cloth, flannels, linsey, and blankets: cloth worth \$1 per yard; linsey 75 cents; flannels, per yard, 50 cents; blankets 50 cents per yard. |
| 8. Quantity and value of different kinds of raw materials annually used; distinguishing between foreign and domestic products?             | 8. Wool, 5,000 lbs., at 37 $\frac{1}{2}$ cents per lb.; dye stuffs about \$50. These articles are made use of annually, (that is the quantity.)                                                                                                                                                                                                                         |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Number of men 2, no women, no children, no wages, on account of ourselves attending to the work.                                                                                                                                                                                                                                                                    |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. We are employed from 8 to 10 hours per day, from September to May.                                                                                                                                                                                                                                                                                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. All country work, and consumed at home.                                                                                                                                                                                                                                                                                                                             |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. They do, to a considerable extent.                                                                                                                                                                                                                                                                                                                                  |
| 14. Where are the manufactures consumed?                                                                                                   | 14. At home.                                                                                                                                                                                                                                                                                                                                                            |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not any.                                                                                                                                                                                                                                                                                                                                                            |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. On credit; the principal part until the people see proper to come and make payment. Barter some little, sell none for cash.                                                                                                                                                                                                                                         |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Some years back the cloth sold at 1 12 and 1 25 cents per yard, but now it sells at \$1, and has been gradually reduced to the present price, which is \$1; in fact we could not get more than 75 cents per yard in cash, but for credit we can get \$1.                                                                                                            |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. You will judge of that yourselves if you please from the present rates; but I know it will have to be more than what it is at present, or I will abandon my business.                                                                                                                                                                                               |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Not more than \$20 in cash, book accounts something more, perhaps \$200.                                                                                                                                                                                                                                                                                            |

SAMUEL WITHROW.

## DOCUMENT 14.—No. 147.

*Woollen Manufactory, Washington County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Washington county, Pennsylvania.                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen factory; propelled by water.                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1820.                                                |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                       | 4. 4,000 dollars.                                       |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. 4,400 dollars.                                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. 500 dollars.                                         |
| 7. Causes of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                             | 7. Decrease, owing to importation of like manufactures. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Agriculture more productive.                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 6,000 dollars.                                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Domestic, except dye stuffs.                        |
| 12. Number of men, women and children employed, and average wages of each class.                                                                                                                                                                                                                     | 12. 8 men.                                              |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours and 10 months in the year.                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                                                                                                                                                                              | 16. At the manufactory.                                 |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. Yes.                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the county.                                      |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None.                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Cash and trade; particulars not recd. lected.       |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                          | 21. Decreased 15 per cent.                              |
| 24. Is any change, necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                    | 24. Yes.                                                |

## DOCUMENT 14.—No. 148.

*Woollen Manufactory, Tioga County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Tioga county.                                                                         |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen manufactory; water power; Tioga river.                                                      |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In the year 1831; individual.                                                                       |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Twenty-two hundred dollars.                                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Seven hundred dollars.                                                                              |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. From four to five per cent.                                                                         |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Lately established; no change.                                                                      |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From six to twenty per cent.                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Satinet, 250 yards, at 75 cents per yd.; 800 yards narrow cloth, at 1 dollar per yd.                |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. About 800 lbs. wool, at 40 cents per pound.                                                        |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Narrow cloth is sold here from 87½ cents to \$1 per yard.                                          |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Two men, at 12 dollars per month, and boarding; 3 children, at 6 shillings per week, and boarding. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours per day, about eight months in the year.                                                  |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Ten dollars per month is the common price for labor.                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Sold at the manufactory.                                                                           |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. Foreign competition is considerable.                                                               |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the neighborhood.                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. None.                                                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                                                          | 20. Some sold for cash, and some bartered for materials, and some at a credit of six months.           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                           | 23. An increase, or at least a continuation of the present duties.                                     |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. About three-sevenths of raw material, three-sevenths of labor, and one-seventh profits of capital. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I would be compelled to abandon the business.                                                      |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. The greater part of it would be lost entirely.                                                     |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Yes, a number.                                                                                     |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                               | 34. It would require an increase of the duties to yield me six per cent.                               |

JOHN CALKINS.

## DOCUMENT 14.—No. 149.

*William Arthur's Woollen Manufactory, Washington County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen; water power.                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1830.                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$14,000.                                |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$3,600.                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. \$1,000.                                 |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Decrease for want of protection.         |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. No other business so unproductive.       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 6000 yards cassinets, from 75 to 80 cts. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. 4000 lbs. wool, 37½; 900 lbs. cotton, value 31½. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. Twelve hands, \$1200.                            |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Twelve hours per day, during the year.           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Three horses.                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. 14 miles to market.                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Generally in the western country.                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Cash.                                            |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. Decreased one-third.                             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. From 75 to 80 cents per yard.                    |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Change necessary.                                |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. New establishment.                               |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Material 40; wages 27½; from 7½ to 12½.          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                     | 29. If reduced to 12½, I would abandon the business. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Agriculture.                                     |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                                                                                                                                                                               | 31. Yes.                                             |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                                                                                        | 36. Much better.                                     |

| QUESTIONS.                                                                                  | ANSWERS.                                      |
|---------------------------------------------------------------------------------------------|-----------------------------------------------|
| 37. Proportion which the production by the American manufacturers bears to the consumption? | 37. Would soon equal, with proper protection. |
| 40. Average rate of wages?                                                                  | 40. Twelve dollars per month.                 |

WILLIAM ARTHUR

## DOCUMENT 14.—No. 150.

*Woollen Manufactory, Washington County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Washington county, Pennsylvania.                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen; water and horse power.                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1820.                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$1,000.                                        |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. 1,200 lbs. wool and cotton; \$270.              |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. \$200.                                          |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Low price of foreign articles of the like kind. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 1500 yards cassinet.                            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Two men, \$150.                                |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve.                                        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Two horses.                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Eighteen miles.                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the State.                                  |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None.                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Cash.                                          |

*Woollen Manufactory, Washington County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                               | 1. Washington county, Pennsylvania.                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                    | 2. Woollen; steam power.                                                                      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                         | 4. \$2,000.                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                         | 5. \$4,000.                                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                                                                                                                            | 6. \$800.                                                                                     |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. Twelve hands; \$150 average.                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. One horse.                                                                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. Some at the factory, but mostly at Pittsburgh.                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. They do to a great extent.                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Sold mostly for cash.                                                                     |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. If so reduced, we should have, we think, to abandon our business, and take to some other. |

BENJAMIN PARKER.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Washington county, Pennsylvania.                                                                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Woollen manufactory; water power.                                                                                               |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Commenced in 1830; not entirely completed till 1832; not a joint stock.                                                         |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                        | 4. Ground, buildings, and water power, \$1,000; machinery, \$600.                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Calculated to manufacture 8,000 weight of wool annually, and employ 4 men, 2 women, and 3 children.                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. In 1831, 400 yards of jeans, worth 5 cents per yard; 600 yards satinet, 60 cents per yard; 900 yards of cloth, at \$1 per yard. |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                    | 12. Four men, 75 cents per day; two women, 25 cents; three children, 20 cents.                                                     |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. Twelve hours.                                                                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. From one to twenty miles.                                                                                                      |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 20. Partly for cash, partly on a credit 90 days, and partly exchanged for wool, stuffs, cotton yarn, meat, grain, &c.              |

## DOCUMENT 14.—No. 153.

*Summary of the Woollen Factories, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                   |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Westmoreland county, Pennsylvania.      |
| 2. Kind or description of the manufactory?                                                                                            | 2. Woollen factories.                      |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$11,500.                               |
| 4. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 4. \$2,900 per annum.                      |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. \$1,000.                                |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. No increase or decrease.                |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. \$4,000.                                |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. \$860 worth of wool, at 40 cts. per lb. |

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?             | 9. No answer.                                                                              |
| 10. Number of men, women, and children employed, and average wages of each class?                                          | 10. From 8 to 10 men, at \$18 per month, and 6 boys, at \$5 per month.                     |
| 11. How many hours a day employed, and what portion of the year?                                                           | 11. Average ten hours per day, all the year.                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 12. At the manufactory.                                                                    |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent? | 13. No answer by any manufacturer.                                                         |
| 14. Where are the manufactures consumed?                                                                                   | 14. In Westmoreland county.                                                                |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                  | 15. No.                                                                                    |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. On credit; credit of six months.                                                       |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Satinet 75 cents per yard, white flannel 50 cts., red 62½, drabs 75, thick cloths 87½. |
| 20. Amount of capital?                                                                                                     | 20. \$1,920.                                                                               |
| 21. Average rate of wages?                                                                                                 | 21. Average wages \$14 per month.                                                          |

The above is a summary of all the woollen factories of Westmoreland county, as extracted from my notes. It does not include any of the fulling mills, or manufactures of woollen in private families: the former I have not had time to procure. I can state, generally, that there are perhaps 12 or 15 fulling mills in this county. Of these, one fuller informed me he cards 7000 lbs. of wool annually, average price 30 cents per lb., and fulls annually 3500 yards woollens, average price 75 cents per yard. His manufacture far exceeds others: perhaps the other mills average one-third the amount of this one. There are also about 25 carding machines, which card on an average 2000 lbs. wool annually.

I regret that the short time allowed has not permitted me to be more particular in this branch, and more full on all the others.

ED. JOHNSTON.

## DOCUMENT 14.—No. 154.

*Cotton Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                                                                                            |
|--------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Hope Cotton Factory, Shoenberger, Wrenshall & Co., Pennsylvania, Alleghany county, opposite Pittsburgh.                          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Spinning cotton yarns; power, steam.                                                                                             |
| 3. When established; and whether a joint stock concern?                              | 3. 1828; by three partners.                                                                                                         |
| 4. Capital invested in ground and buildings, and water power, and in machinery?      | 4. Capital at present invested in ground, is 10,000 dollars, and in buildings and machinery, 67,000 dollars: total, 77,000 dollars. |

| <p>5. Average amount in materials, in cash for the purchase of materials and payment of wages?</p>                                                                                                                                                                                                          | <p>5. Of raw cotton, from 20 to 30,000 dollars; wages, 10,000 dollars, and in miscellaneous expenditures, \$5,000.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed?</p> | <p>6. This establishment has never yet paid a cent into the pockets of any of the proprietors in the shape of dividends or profits. The profits, if any, have been steadily applied to the extension of the machinery. The mill, run past year under the most favorable circumstances, and earned, in fixed capital, that is, in the increase of machinery and buildings, about 15,000 dollars, from which, if the interest of capital invested be deducted, and a necessary allowance for wear and tear of ten per cent., it will be perceived that the proprietors are by no means exorbitantly rewarded for their enterprise; and the continual care and anxiety they encounter, under the hazardous contingencies of success or failure. It is unnecessary to state whether any part of the capital be borrowed or not, as the common interest of six per cent. only is estimated upon the whole investment. If the concern requires funds, the proprietors must pay them in, or the concern must borrow from other sources. In either case the interest must be paid by, or charged to the concern, which owes the money either to the proprietors or other lenders, as the case may be. The interest of money, being the profit on money, it matters not whether invested in bonds, banks, stocks, or manufactories; and the profits of business being the rewards of skill, enterprise, and, industry <i>superadded</i>, it is but fair that the manufacturer who combines <i>both</i> should receive an advantage equivalent, after providing a contingent fund for wear and tear, losses, &amp;c.</p> |
| <p>8. Rates of profit on capital otherwise employed in the same State and county?</p>                                                                                                                                                                                                                       | <p>8. There are no known certain rates of profit of capital employed in this country. Mere money will bring six per cent. Combine business with money, and all must depend upon care, economy, industry, good management, and <i>good luck</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality; and value of each kind?</p>                                                                                                                                                                | <p>9. Above 200,000 lbs. of spun cotton yarn, worth 50,000 dollars.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

In Western Pennsylvania, Ohio, Kentucky, Tennessee, Missouri, Indiana, &c.                                                                                                                                                                                                                                                                   |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. None.                                                                                                                                                                                                                                                                                                                                        |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Our manufactured article is sold generally at a credit of four to six months, payable in cash.                                                                                                                                                                                                                                               |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. The cost to us of our manufacture has increased within the last year, in consequence of the increased price of the raw material, (cotton,) and advance in wages.                                                                                                                                                                             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Average rate of spun yarn, 27 cents per pound.                                                                                                                                                                                                                                                                                               |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The rate of duty, as now established, enables us to compete successfully with foreign efforts.                                                                                                                                                                                                                                               |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. For answer to this query, we refer to our answer to the 6th query.                                                                                                                                                                                                                                                                           |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. This is also answered, as far as we can, in the foregoing answer.                                                                                                                                                                                                                                                                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29 and 30. We believe it would cause us to abandon our business; and then, instead of seeking how to re-invest our capital, being mainly in ground, buildings, and machinery, it would be unsaleable and useless, and, consequently, we would have enough to do to pay our debts, and keep ourselves from a visit to the jail or the poor house. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                  |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Yes, if we had any money left, after the abandonment of the protective system, we might get six per cent. by lending it.                                                                                                                                                                                                                     |

## DOCUMENT 14.—No. 154.—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. We cannot answer this.                                           |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent; and how gradual the reduction should be?                  | 34. The absurdity of this query is shown by our answer to query 6th. |

To all the subsequent queries we have nothing to say.

SHOENBERGER, WRENSHALL & CO.

*Cotton Factory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. Pittsburgh, Alleghany county, Pennsylvania.                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Cotton spinning and weaving; steam power.                                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. Commenced in 1822; joint stock.                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. \$160,000.                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                          | 5. Perhaps \$100,000.                                                          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. Cannot say with certainty.                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                    | 9. Yarn and cotton cloth; perhaps one hundred and seventy thousand dollars.    |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                          | 10. All domestic; 1,000 bales of cotton.                                       |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                          | 11. Cannot tell.                                                               |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                        | 12. 120 females; 90 men, and 20 boys.                                          |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market; with similar articles imported?                                                                                                                                                              | 23. The present rate of duty enables us to compete with foreigners, if honest. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Beaver county.                                                                                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Cotton factory; water power.                                                                                                              |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1825; company concern.                                                                                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$16,000.                                                                                                                                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Materials, \$6,000; cash paid, \$6,000; wages \$3,000.                                                                                    |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Though the business paid average profit about 20 per cent. at one period, it was a losing concern.                                        |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. Excessive competition and increased supply.                                                                                               |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. \$12,000; cotton yarn from 5 to 10.                                                                                                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 50,000 lbs. cotton; 200 gallons oil.                                                                                                     |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 5 men, \$7 50 per week; women and children 30, \$1 75 per week.                                                                          |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours, year round.                                                                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Women, \$1 50 per week; children, no employment.                                                                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. None.                                                                                                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Neighboring country.                                                                                                                     |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. No.                                                                                                                                      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the neighborhood.                                                                                                                     |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. No.                                                                                                                                      |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                  | 29. So far as it respects the article of cotton yarn we fear no foreign competition; the home competition forbids any fears on that subject. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Pennsylvania, Beaver county.                                                                                                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Cotton spinning per water power, and weaving by hand.                                                                                                                |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1830; in this county; not a joint stock.                                                                                                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Eighty to one hundred thousand dollars.                                                                                                                              |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The factory not being in full operation, cannot say.                                                                                                                 |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Competition among the manufacturers, and improvements in machinery, as well as increased knowledge of manufacturing, is the cause of a decrease in price and profit. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. No cotton; 500 lbs. indigo.                                                                                                                                         |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 12 hours per day, all the year.                                                                                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Seven horses and eight oxen.                                                                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Some of the goods sold in the vicinity, some in Pittsburgh, and some in Philadelphia.                                                                               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. Foreign articles of like kinds do not enter into competition.                                                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Principally in the United States.                                                                                                                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Sometimes cash; generally six months' credit, and bartered for imported dry goods with the merchants.                                                               |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Decreased in both material and labor.                                                                                                                               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                              | 29. I would immediately abandon the business.                                                                                                                           |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                       | 30. Hard to say; but I hope I would be able to live on the farm: I think I would cultivate it.                                                                          |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                                                          | 34. I believe there are few manufacturing concerns which pay more now, when a fair allowance is made for the time, attention, and risk of the proprietor—mine does not. |

JAMES PATTERSON.

## DOCUMENT 14.—No. 158.

 *Harmony Woollen and Cotton Manufactory, Beaver County, West Pennsylvania.*

## QUESTIONS.

1. State and county in which the manufactory is situated?

2. Kind or description of the manufactory, and whether water, steam, or other power?

3. When established, and whether a joint stock concern?

4. Capital invested in ground and buildings, and water power, and in machinery?

5. Average amount in materials, and in cash for the purchase of materials and payment of wages?

6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed?

7. Cause of the increase (or decrease, as the case may be,) of profit?

8. Rates of profit on capital otherwise employed in the same State and county?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

## ANSWERS.

1. State of Pennsylvania, in the county of Beaver.

2. Wool and cotton; separate establishments; both steam power.

3. Established in 1826; owned by the Harmony Society in common.

4. Capital in cotton manufactory \$25,000, woollen manufactory \$30,000.

5. \$10,000 worth materials in the cotton line, \$32,000 worth materials in the woollen line, bought for cash. Amount of wages in the cotton \$3,400, in the woollen \$10,637.

6. Profit in the

| Cotton business. |              | Woollen do.  |
|------------------|--------------|--------------|
| 1827             | 15 per cent. | 14 per cent. |
| 1828             | 14           | 15           |
| 1829             | 12           | 16           |
| 1830             | 8            | 18           |
| 1831             | 12           | 14           |

7. Cause of decrease in the profits in the cotton business occasioned by great competition. Cause of increase of profit in wool, up to 1830, is the protecting tariff. Cause of decrease in 1831, great importations of foreign goods, and the extreme high prices of wool.

8. Not known.

9. 1827, Wool—

| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                   | 11. Not known.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 12. Number of men, women, and children employed, and average wages of each class?                                                 | 12. Woollen factory employs 50 men, at \$3 50 per week; 15 boys, at \$2 50; 15 females, at \$1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 13. How many hours a day employed; and what portion of the year?                                                                  | 13. Average 12 hours per day the whole year, except one week in harvest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and country, in other States, and in foreign countries? | 14. Men, at common labor, from 2 to \$5 per week; females at \$1, in same State and county.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 15. Number of horses or other animals employed?                                                                                   | 15. One 4 horse team for both factories.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                         | 16. Partly sold at home, and partly sent off 18 to 500 miles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?        | 17. Foreign cloths and flannels enter into competition to a large extent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 18. Where are the manufactures consumed?                                                                                          | 18. In Pennsylvania, Maryland, Virginia, Ohio, Kentucky, Indiana, and Illinois.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                          | 19. No goods from this manufactory are exported to foreign countries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?        | 20. Generally sold on a credit of 6 months.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. The cost of manufactured articles has increased in consequence of the rise in wool, say 10 per cent. in 1830, and 20 per cent. in 1831.                                                                                                                                                                                                 |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Average price of manufactures:<br>Bro. cloths. Casinets. Flannels. Blankets.<br>1827, \$3 00 60 35 4 75 p. y.<br>1828, 3 00 60 35 4 75<br>1829, 2 75 60 35 4 75<br>1830, 2 87½ 60 35 5 00<br>1831, 3 00 68 38 5 50<br>Cotton yarn and brown sheeting:<br>1827, 27 13 cents.<br>1828, 27 11½<br>1829, 24½ 9<br>1830, 22 9<br>1831, 25 10 |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present rate of duty is sufficient if strictly enforced, and smuggling prevented.                                                                                                                                                                                                                                                   |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. None.                                                                                                                                                                                                                                                                                                                                   |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. See answer to query 8.                                                                                                                                                                                                                                                                                                                  |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Cotton materials 50 per cent., labor 38, profit 12; wool materials 55 per cent., labor 30, profit 15.                                                                                                                                                                                                                                   |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. This manufactory not being a distinct concern, no separate account is kept of agricultural and other domestic productions consumed by the manufacturers.                                                                                                                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. It would cause me to abandon the business immediately.                                                                                                                                                                                                                                                                                  |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. In agriculture and grazing.                                                                                                                                                                                                                                                                                                             |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Agriculture, or almost any other pursuit.                                                                                                                                                                                                                                                                                               |

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                      | 32. Salt and iron are dependant on protection in a great measure.                                          |
| 33. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 33. Not prepared to answer.                                                                                |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                              | 36. The operation would be extremely beneficial, provided the imported goods were valued in our own ports. |

ECONOMY, April 14, 1832.

FREDERICK RAPP,  
Per R. L. BAKER.

## DOCUMENT 14.—No. 159.

*Theophilus Kochler's Cotton Manufactory, Centre County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Centre county.                                                                                                                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Cotton manufactory; water power, is an individual concern.                                                                                                      |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Some years hence, but seldom carried on, until last June it fell into my hands, &c.                                                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Not being the owner of ground and buildings, therefore cannot tell; but in the latter about \$2,000.                                                            |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About two thousand five hundred dollars.                                                                                                                        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6 & 7. Cannot speak in favor of profit, having spent considerable in the operation since last June, owing to the hands employed not being skilled in this pursuit. |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                               |                                                                                                                                                                    |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Cannot say positively.                                                                                                                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Single, and double, and twisted yarn, to amount of \$1,500; the former at 23 cents per lb., the latter at 37½ cents per lb.                                     |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 5,300 lbs. Raw cotton, American product, at 11½ cents per lb., value \$600.                                                                                    |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. Have no accurate knowledge of the present price current of the foreign article.                          |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. One man at \$1 25 per day, one man at \$1 per day, and 6 girls each at 25 cents per day.                 |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Twelve hours, according to regulation, throughout the year.                                              |
| 14. Rate of wages of similar classes otherwise employed in the same State and country, in other States, and in foreign countries?                                                                                                                                                                                                          | 14. The same wages to experienced hands in this State.                                                       |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. One horse.                                                                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. In this and the neighboring counties at the distance of 60 miles.                                        |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. Cannot say yet to what extent.                                                                           |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. See query 16.                                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. None.                                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. For cash, six months' credit, and marking for support of hands, &c.                                      |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. In the commencement the increase of cost has been in the labor only, but of late in labor and materials. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Referred to in query 9.                                                                                  |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market with similar articles imported?                                                                                                                                                                                                | 23. As established by law.                                                                                   |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Not according to any presumption.                                                                        |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. See query 6 and 7.                                                                                       |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. See answers to the queries on this subject above.                                                        |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. About \$1,000.                                                                                           |
| 28. What quantity or amount of manufactures, such as you make, are produced in the                                                                                                                                                                                                                                                         | 28. Cannot state accurately.                                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| United States, and what amount in your own State?                                                                                                                                                                                                                       |                                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Beyond question abandon this business.                                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Perhaps in buying and selling goods, or a more encouraging manufacturing pursuit. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Cannot say now.                                                                   |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. Not as regards this section of country.                                           |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. See query 4 and 5.                                                                |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction shall be?                                                                                                | 34. As my capital is now employed, it will bear no reduction.                         |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                        | 35. Cannot answer at this moment.                                                     |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                     | 36. Not aware of the extent of supposed fraud.                                        |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. Could sell more in the same circle if manufactured here.                          |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                        | 38. The extent and increase is great, but cannot give a proper estimate.              |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                            | 39. Cannot say.                                                                       |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. Am also not aware.                                                                |

May 4, 1832.

THEOPHILUS KECHLIN

## DOCUMENT 14.—No. 160.

*Cotton Manufactory, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                                             |
|--------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. State of Pennsylvania, Fayette county.                                            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Cotton manufactory; steam power.                                                  |
| 3. When established; and whether a joint stock concern?                              | 3. Joint stock.                                                                      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?      | 4. Twelve thousand dollars.                                                          |
| 12. Number of men, women, and children employed, and average wages of each class?    | 12. 22 females, average wages \$1 25 per week; 6 men, average wages \$7 50 per week. |
| 13. How many hours a day employed, and what portion of the year?                     | 13. 12 hours; whole year.                                                            |

## DOCUMENT 14.—No. 161.

*Steel Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Alleghany county, State of Pennsylvania.                                         |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Steel manufactory; "steam power."                                                |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1838.                                                                         |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Sixteen thousand dollars.                                                        |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Fourteen thousand four hundred dollars.                                          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Not any borrowed.                                                                |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Sixteen thousand dollars; blister, shear and cast steel, equal to that imported. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Two tons of iron weekly, (domestic.)                                            |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Blister, 18 cents; shear, 20 cents; cast, 20 cents; from England.               |
| 12. Number of men, women, and children employed; and average wages of each class?                                                                                                                                                                                                                    | 12. Myself and three sons. <sup>b</sup>                                             |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Ten hours per day "regularly."                                                  |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. None.                                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. At home and abroad.                                                                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. They do, everywhere; Nailor & Co. have reduced their Steel everywhere that my Steel comes in competition with them, (English.) |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. Everywhere.                                                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                               | 19. None exported.                                                                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Bartered for iron, and cash at six months' credit.                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?              | 21. Since 1828, increased, (hammered iron.)                                                                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. Three cents per pound.                                                                                                         |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Certainly not.                                                                                                                 |
| 36. What would be the operation of this change upon the frands at present supposed to be practised?                                                                                                                                                                     | 36. Answered to query "37."                                                                                                        |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. One five-hundredth part.                                                                                                       |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. One dollar per day.                                                                                                            |

May 21, 1832.

SIMEON BROADMEADOW.

| QUESTIONS.                                                                                      | ANSWERS.                        |
|-------------------------------------------------------------------------------------------------|---------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                 | 4. \$6,000.                     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | \$2,500 for coal.               |
| 12. Number of men, women, and children employed; and average wages of each class?               | 12. Five men at \$17 per month. |
| 15. Number of horses or other animals employed?                                                 | 15. Three horses.               |

JAMES M'DONALD.

## DOCUMENT 14.—No. 163.

*'Salt Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Pennsylvania, Alleghany county.            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Salt.                                               |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1826; not joint stock.                              |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$8,000.                                            |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$3,600 for coal.                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Six per cent.                                       |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                               | 7. Quantity in market.                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 32,000 bushels annually.                            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Seven men, average wages \$17 per month.           |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Average 12 hours per day.                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Five horses.                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. At Pittsburgh.                                     |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. From \$1 25 to \$3 per barrel; 5 bushels, 280 lbs. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. No profits for the last three years, hope for better times. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                     | 29. I would abandon the business.                               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Not in salt.                                                |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent?                                                                                                                                                                 | 31. Any other business.                                         |

GEO. AMHUTZ, Jr.

## DOCUMENT 14.—No. 164.

*Salt Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                           |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Alleghany county. |
| 2. Kind or description of the manufactory?                                                                                            | 2. Salt; steam power.              |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$3,000.                        |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$3,700.                        |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Uncertain.                      |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Can't say.                      |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 10,500 bushels.                 |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                        | 9. Don't know.                     |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Four men.                      |

| QUESTIONS.                                                                                                                                 | ANSWERS.                        |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Day and night, alternately. |
| 12. Whether the manufactures find a market at the manufactory? If not, how far are they sent to market?                                    | 12. To Pittsburgh, 14 miles.    |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Don't know of any.          |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the country.             |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. None.                       |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. For cash.                   |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Various; 40 cents average.  |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The duty of 1828.           |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Can't tell.                 |
| 21. Average rate of wages?                                                                                                                 | 21. \$16 per month.             |

WM. CAVEN.

## DOCUMENT 14.—No. 165.

*Salt Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Alleghany county, State of Pennsylvania.                        |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Salt. Steam power.                                              |
| 3. When established; and whether a joint stock concern?                                                                               | 3. 1827. Individual.                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Ten thousand dollars.                                           |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                | 7. Competition; the demand not equal to the quantity manufactured. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                        | 8. Glut in market. Works stop.                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Fifteen thousand bushels.                                       |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Eight men, \$17 per month.                                     |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. Night and day, 250 days.                                       |

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                        | 15. Six horses.                                                                                                                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                              | 16. Part at works, residue at Pittsburgh, six miles, and down the river as far as Nash-ville.                                                                                    |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                             | 17. No foreign competition here, but the reduction of duty has and will curtail the demand down the river.                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                             | 20. Every way.                                                                                                                                                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?             | 21. Uniform, except in wages.                                                                                                                                                    |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                   | 22. Forty to sixty cents per bushel.                                                                                                                                             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                             | 23. Before the reduction of duty we expected to compete with the foreign article, when the canal was completed; this hope is now abandoned, and a number of the works must stop. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. The business now a poor one; this would be ruinous to our manufactures generally.                                                                                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                         | 30. Have thought of this, but not come to a conclusion.                                                                                                                          |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                            | 32. I believe those articles free of duty, when our canals are in operation, would compete at our works.                                                                         |

PITTSBURGH, 9th May, 1832.

BOYLE IRWIN.

## DOCUMENT 14.—No. 166.

*Salt Works, Armstrong County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                                                                                                                                        |
|--------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. I manufacture salt on both sides of the Kiskiminetas river, in the counties of Westmoreland and Armstrong, Pennsylvania.                                                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. There are from 18 to 20 salt wells worked by me; at each well there is a small steam engine to raise the water; one of them also drives a steam mill with two run of stones. |

## DOCUMENT 14.—No. 166—Continued.

## QUESTIONS.

## ANSWERS.

3. When established; and whether a joint-stock concern?

4. Capital invested in ground and buildings, and water power, and in machinery?

5. Average amount in materials, and in cash for the purchase of materials and payment of wages?

6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?

7. Cause of the increase (or decrease, as the case may be) of profit?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed; and what portion of the year?

14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

3. The first well on the Kiskiminetas was established in 1820; they have been since increased to 50. The 20 I work are now the property of Gen. R. I. Stewart, of Pittsburgh.

4. The capital invested in the above 20 wells is \$ 100,000; the other wells in the same proportion, about \$ 5,000 to each well.

5. There is about 100 lbs. of sheet copper used for tubes in each well; all other materials used are the produce of Pennsylvania, to wit: wood, wrought iron, and cast iron.

6. These salt wells, or any other in Pennsylvania, have not averaged since their commencement more than twelve per cent. clear profit.

7. The competition has decreased the profits, and that with the reduction of duty will, before one year, reduce it to six per cent., and in many instances to nothing, (a loss.)

9. These 20 wells manufacture 150,000 bushels of salt annually, a pound of which is equal to a pound of any imported salt when it has the same age: the price at the works for the last four years has been 35 cents per bushel of 56 pounds; in 1826 and 1827 it was sold for 25 cents; and, owing to the reduction of the duty and competition, it will soon be that price again.

11. Imported salt sells in all the seaport towns from 45 to 50 cents per bushel.

12. The 20 wells I work employ about 160 men, and feed and clothe 600 men, women, and children. Coal diggers receive one dollar per day, and salt boilers \$ 17 per month.

13. The salt works go night and day (Sundays excepted); the boilers work each twelve hours.

14. Farmers do not pay by three dollars per month as high wages; iron works the same as salt works.

15. Very few horses; not more than four at twenty wells.

16. One half the salt manufactured in Western Pennsylvania is sent down the Ohio to Virginia, Ohio, Kentucky, Tennessee, Indiana, Missouri, &c.

17. Since the reduction of duty on foreign salt it meets the domestic salt higher up the Ohio than formerly, and affects the price.

18. Stated above.

19. None.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Some salt is sold for cash, but generally on a credit of two to six months; almost the whole disposed of at the works is for barter, for wheat, flour, corn, meat, potatoes, dry apples, and other different vegetables, and butter, &c.                                                                                            |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. The cost of the manufacture of salt has decreased principally in the material and improvement in the manner of manufacturing.                                                                                                                                                                                                       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. 1816 and 1817 boiler iron in Pittsburgh was \$ 280 per ton, and castings seven cents per pound; they are both reduced to half the price.                                                                                                                                                                                            |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The former duty of 30 cents per bushel on salt will enable the manufacturers in Pennsylvania to meet foreign near Philadelphia, say at Harrisburgh, if not further east. When the canal and railroad are finished, all the valleys of the Ohio and Mississippi could be supplied at not more than 50 cents per bushel of 50 pounds. |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. This answered to No. 6.                                                                                                                                                                                                                                                                                                             |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. All the materials used in the manufacture of salt are the produce of the United States, except some copper for tubes, and it is expected plenty of that article is also to be found.                                                                                                                                                |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. The manufactures may have 12 per cent. profit; the balance is all expended in labor, wear and tear of the materials of the works: the salt water, and stone coal for fuel, are all taken from the bowels of the earth.                                                                                                              |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. There are not less than 500,000 bushels of salt annually manufactured in the western part of Pennsylvania, and for the last five years sold at the works for thirty-five cents per bushel of 56 pounds.                                                                                                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. If the entire duty should be taken off imported salt, and the price fall in proportion in the seaport towns, all the American manufactures must stop.                                                                                                                                                                               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. I have no capital, as the flood on the 9th February last, 1838, destroyed 15,000 barrels of salt, and other damage, in all to amount of \$ 35,000: this took all my means and more.                                                                                                                                                 |

## DOCUMENT 14.—No. 166—Continued.

## QUESTIONS.

## ANSWERS.

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?

31. If it was not for the slaves in the south, I would go there and make cotton or sugar, as that I believe the most profitable business in the United States; but if the duty is to be further reduced on salt and iron, I would prefer going to Canada.

32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?

32. The market for American iron and salt extends from the seaport town at the east to Nashville and St. Louis in the west; so that imported iron and salt must and will materially injure, if not entirely ruin, all the American manufacturers of these articles, if the duty is taken off.

The balance of the questions I cannot pretend to answer correctly.

ANDREW BOGGS.

KIRKMINETAS, PA. April 5, 1832.

N. B. I send you this as I received it.

EDWARD JOHNSTON.

## DOCUMENT 14.—No. 167.

*Salt Manufactory, Armstrong County, West Pennsylvania.*

## QUESTIONS.

## ANSWERS.

1. State and county in which the manufactory is situated?

1. State of Pennsylvania, Armstrong county.

2. Kind or description of the manufactory?

2. Salt manufactory.

3. Capital invested in ground and buildings?

3. \$4,000.

4. Average amount in materials, and in cash for the purchase of materials and payment of wages?

4. \$2,200.

5. Annual rate of profit on the capital invested?

5. 9 per cent.

7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

7. 1,600 barrels of salt at \$1 90 per barrel.

10. Number of men, women, and children employed, and average wages of each class?

10. Four men at \$23 per month.

11. How many hours a day employed; and what portion of the year?

11. 12 hours per day, and 10 months of the year.

12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

12. From two to seven hundred miles.

14. Where are the manufactures consumed?

14. In the States of Ohio, Virginia, and Pennsylvania.

15. Whether any of the manufactures are exported to foreign countries? and, if so, where?

15. None exported.

## DOCUMENT 14.—No. 171.

*Hugh Bigham's Salt Works, Armstrong County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Armstrong county.                                           |
| 2. Kind or description of the manufactory?                                                                                            | 2. Salt manufactory.                                                                  |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Five thousand dollars.                                                             |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Two thousand dollars.                                                              |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Twelve per cent.                                                                   |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Decrease of the profit occasioned by the duty having been taken off salt imported. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. One thousand four hundred barrels, at \$1 80.                                      |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Six men at \$21 each per month.                                                   |

DOCUMENT 14.—No. 171—Continued.

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                        |
|----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| 11. How many hours a day employed, and what portion of the year?                                                           | 11. Twelve hours per day, and nine months of the year.                          |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 12. Six hundred miles.                                                          |
| 14. Where are the manufactures consumed?                                                                                   | 14. In the States of Pennsylvania, (western part,) Ohio, Kentucky and Virginia. |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                  | 15. None exported.                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. At a credit of from two to six months.                                      |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Four years since at \$2 50.                                                 |
| 19. What has been the rate of your profits, annually, for the last three years?                                            | 19. Twelve per cent.                                                            |
| 20. Amount of capital?                                                                                                     | 20. Seven thousand dollars.                                                     |
| 21. Average rate of wages?                                                                                                 | 21. Twenty-one dollars.                                                         |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Beaver county, State of Pennsylvania.                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Salt manufactory; steam for pumping.                       |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Fall of 1829; individual.                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Six thousand dollars.                                      |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Expense per day for materials and labor, 8 dollars.        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. No profits; no capital borrowed.                           |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Water too weak.                                            |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 1,000 barrels annually, sold for three dollars per barrel. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Seven men, average wages 18 dollars per month.            |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve hours all the year.                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Five horses.                                              |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Sold at the manufactory.                                  |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                              | 17. No foreign competition.        |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. At home.                       |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                | 19. No exportation.                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Exchanged for country produce. |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?            | 21. No change.                     |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Give it up.                    |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Farming.                       |

M. ADAMS.

## DOCUMENT 14.—No. 174.

*Salt Manufactory, Butler County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                          | ANSWERS.                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                           | 1. Butler county, Pennsylvania, at Harmony.          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                | 2. Salt; steam power to pump the water, 428 feet.    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                             | 3. 5 years since; a joint stock.                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                     | 4. Ten thousand dollars.                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                     | 5. Payment of wages, \$175 per month.                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Profit, \$3,440 per annum, exclusive of interest. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. 13,000 bushels salt per annum, \$6 1/2 to the bushel.            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. 10 men per day, at 17 1/2 dollars per month.                    |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. 12 hours a day the whole year.                                  |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Persons otherwise employed receive 13 dollars per month.        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. 1 horse.                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Market at the works.                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. No foreign salt is sold here.                                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In the country around the works.                                |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. None exported.                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Cash and agricultural products.                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. A slight increase in the price of labor, about 12 1/2 per cent. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Average sales are 60 cents per bushel.                          |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present duty is low enough.                                 |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. \$3,440 per annum; no dividends made.                           |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Difficult to answer.                                            |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Two-thirds of the whole expense is agricultural products.       |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We would abandon the business if the price should be reduced. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. Out of foreign competition perhaps 150 miles.                 |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. The works support themselves.                                 |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. All American.                                                 |

March 10, 1832.

For ISAAC WILSON.  
D. & J. WILSON.

*Wm. McFarland's Salt Manufactory, Indiana County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Indiana county, Pennsylvania.                                                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Salt manufactory, by boiling.                                                                                                               |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1801; individual concern.                                                                                                    |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                       | 4. Seven thousand dollars.                                                                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Copper and iron are almost the only materials used in erecting salt works, the value of which about \$1,500, wages \$1,600 per annum.       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Owing to low prices of salt, and frequent failure of wells, few persons in this section of country have realized any thing beyond a living. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Strong or weak water.                                                                                                                       |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Not easily ascertained, varying from 5 to 15 per cent.                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About 18,000 bushels per annum.                                                                                                             |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                         | 10. Salt water and coal, both of which on the lands attached.                                                                                                                                                                                                                                                             |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                         | 11. Foreign salt would cost, at present, Pittsburgh, about \$1 per bushel.                                                                                                                                                                                                                                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. Seven men, at 87½ cents per day.                                                                                                                                                                                                                                                                                      |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                        | 13. Twelve hours per day, throughout the year.                                                                                                                                                                                                                                                                            |
| 14. Rate of wages of similar classes otherwise employed in the same State and country, in other States, and in foreign countries?                                                                                                                                       | 14. Varying from 50 cents per day to \$1, including board.                                                                                                                                                                                                                                                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. Three horses.                                                                                                                                                                                                                                                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. About one-sixth sold at home, the balance sent to the towns on the Ohio, Nashville, Tenn., Florence, Ala., St. Louis, Mo., &c.                                                                                                                                                                                        |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                              | 17. In consequence of prejudice in the eastern market, the salters of provisions in the west are obliged to use a portion of foreign salt, (generally Turks' Island,) which has the effect of lessening the demand for the domestic article, though the foreign is generally rated from 25 to 50 cents per bushel higher. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. In 1822 salt was worth at the west 75 cents per bushel; it is now held at \$1, he will not, at present, net over 20, when sent to any of the markets down the Ohio, which is owing principally to domestic competition.                                                                                               |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. At the present prices of foreign salt on the sea-board, (40 to 45 cents,) a duty of 20 or 25 cents would enable the manufacturers here to send their salt as far east as Philadelphia, as soon as the Pennsylvania canal is completed.                                                                                |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. The raw materials cost nothing, but the wages paid for labor, and the value of cost of the land belonging to the establishment.                                                                                                                                                                                       |
| 28. What quantity or amount of manufactures, such as you make, are produced in the U. States, and what amount in your own State?                                                                                                                                        | 28. I should estimate the quantity of salt made in Western Pennsylvania at from five to six hundred thousand bushels.                                                                                                                                                                                                     |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Should the present price of salt continue, (say to net but 20 cents,) it would be unprofitable to me, and a sinking business in two-thirds engaged, who have not such good wells.                                                                                                                                     |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. The salt manufactories are generally remote from the sea-board, yet the foreign salt meets the domestic at Lewistown, Penn., as far up the Ohio as Cincinnati: a reduction of duty would necessarily circumscribe the market for domestic salt.                                                                       |

## DOCUMENT 14.—No. 176.

*Salt Manufactory, Indiana County, West Pennsylvania.*

## QUESTIONS.

1. State and county in which the manufactory is situated?

2. Kind or description of the manufactory, and whether water, steam, or other power?

3. When established, and whether a joint stock concern?

4. Capital invested in ground and buildings, in water power and in machinery?

5. Average amount in materials, and in cash for the purchase of materials and payment of wages?

6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?

7. Cause of the increase, (or decrease, as the case may be,) of profit?

8. Rates of profit on capital otherwise employed in the same State and county?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?

11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed, and what portion of the year?

14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

## ANSWERS.

1. Indiana county, Pennsylvania.

2. Salt, manufactured by boiling.

3. Established in 1822; individual concern.

4. Seven thousand dollars.

5. Iron and copper are almost the only materials, and the amount used in erecting my manufactory \$1,500; wages per annum, \$1,600.

6. Owing to low prices of salt, and frequent failure of the wells, few, if any persons, in this section of country, who have been engaged a series of years, have realized any profit beyond a living.

7. Strong or weak water, or low prices.

8. Various, and not easily ascertained.

9. About 9,000 bushels per annum.

10. Materials used, salt water and coal, both of which on the lands attached to the establishment.

11. Foreign salt in Pittsburgh would cost, at present, about \$1 per bushel.

12. Six men, 87½ cents per day, exclusive of mechanics.

13. Twelve hours per diem, throughout the year.

14. Rate of wages on this part of Pennsylvania canal 87½, men employed in agriculture about 60 cents per day, including board.

15. Two horses, and no other animals.

16. About one-fourth sold at home; the balance has to be sent to the towns on the Ohio, and to Nashville, Tenn., Florence, Ala., and St. Louis, Mo., &c.

17. Owing to prejudice in the eastern markets, salters in the west are obliged to use a portion of Turks' Island salt, which has the effect of lessening the demand for domestic salt, though the foreign has rated about 25 to 50 cents higher.

19. Not any except when it is used in salting provisions.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. In 1822, 75 cents per bushel, now 35 at the works, but will not net that when sent to market, owing to a late depression from domestic competition.                                                                                                            |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. A duty of 25 cents per bushel would enable the manufacturer here to send his salt to Philadelphia as soon as the Pennsylvania canal is completed.                                                                                                              |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. The raw materials cost nothing, but wages paid for labor, and value or cost of the land.                                                                                                                                                                       |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. I should estimate the amount of salt manufactured in this State at 500,000 bushels.                                                                                                                                                                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Should the present price of salt continue, (say to net but 20 cents,) I shall have to abandon the business, and many more of the manufacturers will have to do so likewise: an increase of duty would enable the manufacturer to extend the market.            |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. The salt manufactures are remote from the sea-board, yet the foreign salt meets the domestic in Lewistown, Mifflin county, Pa. and as far up the Ohio as Cincinnati; a reduction of the duty would circumscribe our market, and an increase of duty extend it. |

WILLIAM BARKER.

*Salt Works, Indiana County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. Indiana county, State of Pennsylvania.                                                                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Salt works; two wells pumped by steam, and two wells by horse power, making four wells in operation.                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. Established in 1828; private concern.                                                                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. Twelve thousand dollars.                                                                                               |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. Profit in the years 1829 and 1830, 15 per cent.; in 1831 it will not net 6 per cent. on account of the duty taken off. |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                   | 7. On account of the decrease; we believe on account of the duty being taken off.                                                                                                                              |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                         | 10. We use no foreign article unless copper for tube, which costs about 50 or \$60 to each well, first cost of copper: a well will cost to establish in this part of the country, from 2,000 to 3,000 dollars. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                         | 11. I have not seen any foreign salt in this part of the country for 20 years.                                                                                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. It will take from 8 to 9 men to carry on one salt well, including coopering, &c.                                                                                                                           |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                        | 13. We have double set of hands; go on 24 hours, and all times of the year.                                                                                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                        | 14. For coal digging, \$1 to \$1 50 per day; for boiling, 18 to 19 dollars per month.                                                                                                                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. Generally two horses.                                                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. We sell about one-third of the salt made at the works; the balance is sent from 5 to 700 miles down the Ohio river, and from 100 to 150 over the mountains.—                                               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. When we come in competition with foreign salt of last or this year; foreign salt will not let us send our domestic salt much further than Pittsburgh, and will not be more than 50 miles.                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Some for cash, the most for trade of the country; credit, three to six months.                                                                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?              | 21. The principal cost is iron and metal; iron has fell in price about \$10 per ton; metal remains much the same.                                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. We have sold salt for \$2 per barrel, for 280 lb., and 35 cents per bushel; for the last few years; before that it was up to \$3 per barrel.                                                               |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. I am not acquainted with the first cost of salt at the islands; the duty ought to be so salt could not be sold in the city below forty cents.                                                              |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                        | 24. None that I know of.                                                                                                                                                                                       |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. In this State from 600,000 to 700,000 bushels.                                                                                                                                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. In most cases it would cause the works to be abandoned.                                                                                                                                                    |

## DOCUMENT 14.—No. 177.—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                              | 30. In many cases there would be but little capital left to employ in any way.                                                           |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                                | 31. In merchandising, or raising stock.                                                                                                  |
| 32. Are not the manufactures of salt and iron remote from the points of importation, and of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. They are remote from the sea board; but meet with foreign competition to the east at Huntingdon, and to the southwest at Cincinnati. |

For J. & H. DEAN,  
HENRY DEAN.

*Salt Manufactory, Indiana County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                        | 1. Indiana county, Pennsylvania.                                                                                                                                                                                |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                             | 2. Salt manufactured by boiling with stone coal fuel, and water pumped by steam power.                                                                                                                          |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                          | 3. One established in 1821, and one in 1823.                                                                                                                                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                  | 4. \$13,000 for two salt establishments.                                                                                                                                                                        |
| 5. Average amount in materials, and in labor for the purchase of materials and payment of wages?                                                                                                                                                                                                 | 5. Iron and copper are almost the materials and the work used in erecting our manufactory, \$1,600, and wages per annum 1,700 dollars for each manufactory.                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon and the rate of profit upon that portion which is not borrowed? | 6. Owing to the low prices of salt and frequent failure of the salt water. Few if any person in this section of country, who have been engaged for a series of years, have realized any profit beyond a living. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                          | 7. Strong or weak water, or low prices.                                                                                                                                                                         |
| 8. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                            | 8. It is not known by us what quantity of salt was made here for a few of the first years, but at present one establishment makes 18,000 bushels, and one 13,000 bushels per year.                              |
| 9. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                   | 9. Materials used, salt water and stone coal, both found on the lands attached to the establishments.                                                                                                           |

## DOCUMENT 14.—No. 178—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                          | ANSWERS.                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                  | 12. 13 men, at $87\frac{1}{2}$ cents per day; 3 superintendents, at \$350 per year, for two establishments.                                                                                                                                                                 |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                    | 13. 12 hours per day, through the year.                                                                                                                                                                                                                                     |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                    | 14. Rate of wages on the Pennsylvania canal, $87\frac{1}{2}$ cts.; men employed in agriculture from 50 to 60 cents, including board.                                                                                                                                        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                     | 15. Five horses, including both establishments.                                                                                                                                                                                                                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                           | 16. The surplus quantity of salt which cannot be sold at the works, is sometimes sent as far south as Florence, Alabama, and the intermediate towns on the Ohio, and as far east as Lewistown, Mifflin county, Pennsylvania.                                                |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                          | 17. Foreign salt is now brought to Lewistown by way of the Pennsylvania canal, and to Florence, Alabama, and towns on the Ohio river, as far as Cincinnati, to a large extent.                                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                | 22. In 1822 and 23 salt was sold at \$1, now 35 cents at the works.                                                                                                                                                                                                         |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                          | 23. A duty of 25 cents per bushel would enable the manufacturer to send his salt to Philadelphia when the Pennsylvania canal is completed.                                                                                                                                  |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                        | 26. Raw materials cost nothing but wages paid for labor, and value or cost of the land.                                                                                                                                                                                     |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                    | 27. About \$1,600 per annum is expended for provisions, and not less than \$2,500 per year is expended for clothing men, women, and children. Domestic woollen and cotton goods mostly used.                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to $12\frac{1}{2}$ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Should the present price of salt continue, (say to net but 30 cents,) we should have to abandon the business: an increase of duty would enable the manufacturer to extend the market.                                                                                   |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                      | 30. We would have no capital left to join any business.                                                                                                                                                                                                                     |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                         | 32. The salt manufactures are remote from the seaboard, yet the foreign salt meets the domestic in Lewistown, Mifflin county, Pennsylvania, and as far up the Ohio as Cincinnati. A reduction of the duty would circumscribe our market, and an increase of duty extend it. |

McKEOWN &amp; RODGERS.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p> <p>2. Kind or description of the manufactory; and whether water, steam, or other power?</p> <p>3. When established; and whether a joint stock concern?</p> <p>4. Capital invested in ground and buildings, and water power, and in machinery?</p> <p>5. Average amount in materials, and in cash for the purchase of materials and payment of wages?</p> <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?</p> <p>7. Cause of the increase, (or decrease, as the case may be,) of profit?</p> <p>8. Rates of profit on capital otherwise employed in the same State and county?</p> <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p> <p>11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?</p> <p>12. Number of men, women and children employed, and average wages of each class?</p> <p>13. How many hours a day employed, and what portion of the year?</p> <p>14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?</p> <p>15. Number of horses or other animals employed?</p> <p>16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?</p> <p>17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?</p> <p>19. Whether any of the manufactures are exported to foreign countries? and if so, where?</p> | <p>1. Pennsylvania, Indiana county.</p> <p>2. Salt manufactory; steam power used to pump the water.</p> <p>3. Re-established in 1830 and '21, and individually.</p> <p>4. About \$7,000 in land, improvements, and machinery.</p> <p>5. Materials found on the land; salt water and coal, wages of firemen, and miners, and foreman, \$1,650 per annum; for cooper and stuff for barrels, and blacksmith, \$1,000.</p> <p>6. Rate of profit very irregular: the nature of the business is such as subjects it to sudden and heavy drawbacks.</p> <p>7. Home competition and a circumscribed market, in consequence of foreign salt coming us at Huntingdon, on the east side, and at Cincinnati, on the southwest, is the cause of the decrease.</p> <p>8. Profit varies from 8 to 25 per cent.</p> <p>9. My works went into operation on the 1st of January last; have made 5,000 bushels good salt, worth probably 30 cents per bushel, if it could be sold at the well.</p> <p>11. With the present duty; costs from 20 to 40 cents per measured bushel.</p> <p>12. 5 laborers and a foreman, and their families, exclusive of coopers, about 90 cents per day, the finding them in board, &amp;c., &amp;c.</p> <p>13. 19 hours, and through all the year.</p> <p>14. On the public works the wages are similar; on farms from 60 to 70 cents per day.</p> <p>15. 2 horses.</p> <p>16. About one-fourth vended at home at present; sent 150 miles north, east, and south, and west as far as Florence, in Alabama. When the Pennsylvania canal and railroad is completed the transportation will be so much reduced that it will enable the manufacturer to send east to Harrisburg, and supply the surrounding counties.</p> <p>17. At present the foreign article comes at Cincinnati to the west, and at Lexington and Huntingdon to the east, and at Bedford and South Cumberland, Maryland.</p> <p>19. No.</p> |

## QUESTIONS.

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own state?

29. If the duty upon the foreign manufacture of the kind of goods which you make are reduced to 12½ per cent., with a corresponding reduction on all the imports, would cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater fits even after a reduction of the import duties to 12½ per cent.?

32. Are not the manufactures of salt and remote from the points of importation, of foreign competition within a certain circle around them, and what is the extent of the circle?

## ANSWERS.

20. In part for cash; on credit and bartered for produce and such other articles as are needed at the works.

21. The cost of manufacturing the article has decreased fifty per cent. since 1822, which is principally attributable to the improvement made in the wells, and the mode of manufacturing and reduction in iron, &c.

22. Thirty cents for 56 lbs.; in 1819, '20, '21, and '22, \$1; in '24 and '25, fifty to sixty cents.

23. A duty that would make foreign salt worth fifty cents per bushel in the seaports, would enable the home factories to supply all the country bordering on the Ohio, Mississippi, and their navigable tributaries, and to the vicinity of Philadelphia and Baltimore when the various canals and railroads are completed; and, judging from the rapid extension of the manufacture of salt, and the facility with which the raw material has been found, I would say the country was capable of furnishing it to an unlimited extent.

24. I know of none.

27. All that is used is domestic, except copper; produce from \$500 to \$800 per year; in barrels and other materials \$1,200 to \$1,500.

28. I have not all the information necessary to enable me to state the quantity made in the United States, but estimate the quantity made in western Pennsylvania at from 600,000 to 700,000 bushels per annum.

29. I would abandon the business, unless so many others did so as to curtail the quantity manufactured within the limited demand.

30. In the mercantile business.

31. If the present quantity should continue to be manufactured, I think almost any business would offer greater inducements.

32. If the duty was taken off the circle would be very limited to the southwest and to the east; and when the Baltimore and Ohio railroad is finished to the south, I would not embrace a circle that would exceed, in distance, two hundred miles.

GENTLEMEN: Above you have answers to most of the queries, which have been hastily run out.

Yours, &c.,

THOMAS JOHNSTON.

*Salmont Salt Works, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Salmont, Westmoreland county, Pa.                                                                                                                                                                                                       |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Salt works; steam power for pumping salt works, and stone coal for fuel.                                                                                                                                                                |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Commenced in 1816; went out of operation in 1822; in consequence of the great quantity manufactured and started in 1821 but did not clear expenses by \$2300, on 15th April, from which time we made an average of 100 bushels per day. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Ten thousand dollars.                                                                                                                                                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Annual expenditure of iron and hardware for wear and tear, \$970; payment of wages, \$3427.                                                                                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Loss sustained from 1822 to 15th April, 1831, \$2500; since which time we have realized 20 per cent.                                                                                                                                    |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Cause of decrease is the surplus quantity on hand, for want of more extensive markets for our salt.                                                                                                                                     |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From six to twenty per cent.                                                                                                                                                                                                            |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Formerly about 11,500 bushels; at present we are making at the rate of 12,000 bushels per annum.                                                                                                                                        |
| 10. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 10. From 45 to 50 cents per bushel, from England and the West Indies, at Philadelphia, for some time past.                                                                                                                                 |
| 11. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 11. 16 men; wages from 18 to 26 dollars per month.                                                                                                                                                                                         |
| 12. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                                                     | 12. 12 hours per day, all the year.                                                                                                                                                                                                        |
| 13. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 13. Wages of similar classes in our country varies from 14 to 18 dollars per month.                                                                                                                                                        |
| 14. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 14. Three horses.                                                                                                                                                                                                                          |
| 15. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 15. A small quantity is sold at the works; some is sent west to Cincinnati, south to the Virginia State line, east to Huntingdon.                                                                                                          |
| 16. Whether foreign articles of the like kinds enter into competition with them, at such place of sale; and to what extent?                                                                                                                                                                          | 16. Some foreign salt comes up to Cincinnati, up the Ohio; and some as near as Huntingdon, within 80 miles of us.                                                                                                                          |
| 17. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 17. In the western part of this State, the western part of Virginia, Ohio, and Indiana.                                                                                                                                                    |
| 18. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 18. None.                                                                                                                                                                                                                                  |
| 19. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 19. But a small quantity for cash; the remainder on credit, and bartered for produce.                                                                                                                                                      |

DOCUMENT 14.—No. 180.—Continued.

## QUESTIONS.

## ANSWERS.

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. What has been the rate of your profits, annually, for the last three years? and if be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

25. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 13½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or could you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?

32. Are not the manufactures of salt and soda remote from the points of importation, free of foreign competition within a certain circle around them, and what is the extent of that circle?

34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual the reduction should be?

21. Salt in 1818 cost 130 cents per bushel to make; the cost has decreased gradually until the present, which is from 25 to 30 cts. per bushel.

22. In 1818 sold for 150 cents per bushel, and has gradually decreased until 1828, and is established at 35 cents per bushel at works or manufactory.

23. As soon as our Pennsylvania canal and railroads are complete, a duty of 30 cents per bushel on foreign salt would enable us to send our salt to the Philadelphia market, or at least as far east as the Susquehanna, and a greater distance south and west.

25. Profits about five per cent.; a joint stock, consisting of two partners.

26. Cannot say.

27. At present we consume at the rate of \$2500 per year for agricultural productions, and about the rate of \$2500 for clothing.

28. There is manufactured in Western Pennsylvania between \$00,000 and \$50,000 bushels of salt annually.

29. It is most likely that we would have to abandon our business in such case, as we could only supply a very small circle.

30. If our business was abandoned, our property would be of no value, and we would have no capital left to invest in any thing else.

31. This we do not know.

32. We are out of competition in a very small circle, from 40 to 80 miles.

34. There are many manufactories now that do not yield six per cent.

| QUESTIONS.                                                                                  | ANSWERS.                                                                    |
|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 37. Proportion which the production by the American manufacturers bears to the consumption? | 37. Domestic salt supplies about half the consumption of the United States. |

SAMUEL DOBBIN,  
JOHN ABTS,  
*Proprietors.*

## DOCUMENT 14.—No. 181.

*N. M. D. Sterrett's Conemaugh Salt Works, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Sterrett's salt works on the Conemaugh river, Westmoreland county, Pennsylvania.                                                                                                                                                                                                                                                                                                                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Salt is manufactured with <del>stone</del> coal fuel; steam power.                                                                                                                                                                                                                                                                                                                                 |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. These works were established in 1818 individual stock.                                                                                                                                                                                                                                                                                                                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Capital invested six thousand dollars in land, buildings, and machinery.                                                                                                                                                                                                                                                                                                                           |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Stone coal and salt water being the only materials used, are found on the premises attached to the works.                                                                                                                                                                                                                                                                                          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Some years it has turned out to be a losing business, by losses in transportation and otherwise; and in other years but moderate profits have been made: the rate per cent. in this concern for the last ten years has not been an average of more than eight per cent.                                                                                                                            |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. The increased production of domestic salt has been caused by many enterprising citizens who have engaged in the manufacture thereof within the last 10 or 12 years.                                                                                                                                                                                                                                |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. This varies from 15 to 33½ per cent.                                                                                                                                                                                                                                                                                                                                                               |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. It is not exactly known what quantity of salt was made here during the first few years, but at present, about or for the last three years, the average has been 12,000 bushels. There are on this river, now in operation, in the space of three miles up and down the river, eleven salt manufactories averaging each from 12 to 14,000 bushels per annum; in all 154,000 bushels salt per annum. |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. No raw materials are used except salt water and stone coal; but large quantities of sheet and bar iron, castings, &c. Iron is used for the construction of salt pans, engines, &c. castings for grate bars, braces, parts of engines. One engine is necessary for every and each manufactory, which costs from four to                                                                            |

DOCUMENT 14.—No. 181—Continued.

## QUESTIONS.

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed, and what portion of the year?

14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

## ANSWERS.

six hundred dollars; sheet iron costs us \$165 per ton, bar iron \$110, castings \$60 per ton: no foreign articles are used to any amount except copper tubes and screws, of which it requires about \$200 worth to each manufactory.

12. I employ twelve men the whole year at an average of \$20 per month, one superintendent at \$500 per year.

13. Twelve hours per day, summer and winter.

14. From 14 to 15 dollars per month.

15. Two horses are employed the year round for each manufactory.

16. The surplus salt which cannot be sold at home is sent by different manufacturers to Cincinnati, Louisville, Nashville and Florence, Alabama, and has been sent as far east as Lewistown, Mifflin county, Pennsylvania, a distance of about 100 miles from these works.

17. Foreign salt is brought to Lewistown and Huntingdon, by the Pennsylvania canal, and up the Mississippi and Ohio rivers as far as Cincinnati and Maysville.

22. In 1818 salt was sold here at \$1.50 per bushel: at present it is only worth 35 cents per bushel at the works; and when sent to a distant market it sometimes does not meet more than from 20 to 30 cents per bushel, after the charges for transportation, &c. are paid.

23. The transportation of salt is expensive on account of its bulk and weight: a less duty than 25 cents per bushel would enable the manufacturer to enter into competition with imported salt: a duty of 12½ cents would enable the manufacturer to send it farther east or west.

27. About \$1,200 per annum is expended for provisions, and about the same amount is expended in clothing men, women, and children for each manufactory; domestic woollen and cotton goods are mostly used.

28. The quantity of salt manufactured in Western Pennsylvania is estimated at 600,000 bushels per annum.

29. This would compel us to abandon the manufacture of salt altogether in this section of the country.

30. In the manufacture of iron or paper, or in agriculture.

DOCUMENT 14.—No. 181—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. Foreign salt is now brought to Huntingdon, by way of the Pennsylvania canal, from Philadelphia: Huntingdon is but eighty miles from these works. |

## CONEMAUGH SALT WORKS.

N. M. D. STERRETT.

N. B. Mr. Sterrett's return will answer generally for the works along the Conemaugh.  
W. JOHNSTON.

## No. 2.

*Shelton's Salt Works, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Westmoreland county, State of Pennsylvania.                                                                                                                                                                                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. The salt is manufactured from salt water drawn from a well by an engine, and boiled down in sheet-iron pans, with steam coal fuel.                                                                                            |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. The works were established in 1816, and continued in operation till 1834, when the price of salt became so low, (\$1 per bushel,) they were given up till 1830. Individual stock.                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Six thousand dollars in ground, buildings, and machinery.                                                                                                                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. At present the rate of profit is about eight per cent.: from 1824 until 1830 the business would not yield a sufficient profit to warrant the continuance of the manufacture.                                                  |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Since 1829 there has been a greater demand for salt, both at home and abroad, owing probably to a decrease in market of imported salt.                                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. The average quantity of salt manufactured per year is about 12,000 bushels; its present value is 45 cents per bushel.                                                                                                         |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Bar and sheet iron, castings and copper, are the principal materials used in the execution of the works. The quantity of copper used, in proportion to the other articles, will not be more than 1-12 part of the whole.     |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. From 10 to 12 men are employed at \$20 per month.                                                                                                                                                                            |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve hours each day, and work the whole year.                                                                                                                                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Two horses are necessary.                                                                                                                                                                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. A part of the salt is sold at the works; the remainder is taken to Pittsburgh, to Cincinnati, Louisville, and some further down the Ohio river; a good deal that is sold at the works is taken to Virginia and other places. |

DOCUMENT 14.—No. 181—[No. 3]—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. We come in competition with foreign salt at Cincinnati, Ohio; Huntingdon, Penn., and at Cumberland, on the Potomac river, and occasionally at Mount Pleasant, in this county. |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                               | 19. No salt at any time has been exported to foreign countries from this manufactory.                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. An uncertain portion of the salt is sold for cash; the remainder is bartered for produce, &c.                                                                                 |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. From \$1,000 to \$12,000 worth of agricultural and domestic productions are annually consumed.                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. If the duty on salt were reduced to 12½ cents, we would not be able to compete with foreign salt at a living profit.                                                          |

THOMAS SKELTON,  
For WALTER M. SKELTON.

CONEMAUGH SALT WORKS.

No. 3.

*Jacob Drum's Franklin Salt Works, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                         | ANSWERS.                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                          | 1. Franklin salt works, Westmoreland county, Pennsylvania.                                                                                                                                                                                            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                               | 2. Salt is manufactured with steam power and stone coal fuel.                                                                                                                                                                                         |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                            | 3. These works were erected in 1818, and kept in operation till 1822, then they were abandoned and set idle till 1829; this was occasioned by low prices and competition in business; but they have been put in operation again in 1829, in November. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                    | 4. Eight thousand dollars; individual stock.                                                                                                                                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                    | 5. Salt water and stone coal being the only materials used, are found on the premises attached to the salt works.                                                                                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit on that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. This is a difficult question to answer—some years it turned out to be a losing business, by losses in transportation by water and otherwise; and in other years but moderate profits were made.                                                    |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                            | 7. The increased production of domestic salt has been caused by many enterprising                                                                                                                                                                     |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                          | citizens who have engaged in the manufacture thereof within the last 10 or 12 years.                                                                                                                                                                                           |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                   | 8. This varies from 12½ to 25 per cent.                                                                                                                                                                                                                                        |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                         | 9. It is not exactly known what quantity of salt was made here during the first four years, but at present about 14,000 bushels are made per annum.                                                                                                                            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 10. No raw materials are used except water and stone coal; but large quantities of sheet and bar iron are used for the construction of salt pans. No foreign article is used to any amount, except copper tubes, screws, of which it requires about \$100 worth to each works. |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                        | 12. Ten men are employed the whole year at 18 to \$20 per month, and one superintendent at \$500 per year.                                                                                                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 13. Twelve hours per day, summer and winter.                                                                                                                                                                                                                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                              | 16. The surplus quantity of salt which is not sold at the works, is sent by different manufacturers to Cincinnati, Louisville, Nashville, Florence, Alabama, and as far as Lewistown, Mifflin county, Pennsylvania.                                                            |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 17. Foreign salt is now brought to Huntingdon by way of the Pennsylvania canal up the Mississippi and Ohio rivers as far as Cincinnati and Maysville.                                                                                                                          |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 22. In 1818 salt was sold here at \$1.50 per bushel; at present it is only worth 30 cts. at the works; and when sent to a distant market, it is sometimes not worth more than 30 cts. per bushel, after the charges for transportation, &c. are paid.                          |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 23. The transportation of salt is expensive on account of its weight and bulk; a duty of 5 cents per bushel would enable the manufacturer to send it further east or west.                                                                                                     |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 27. About \$1,200 per annum is expended for provisions, and about the same amount is expended in clothing men, women, and children; domestic woollen and cotton goods are mostly used.                                                                                         |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 28. The quantity of salt manufactured in Western Pennsylvania is estimated at from five to six hundred thousand bushels per annum.                                                                                                                                             |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them; and what is the extent of that circle?                                                                             | 29. This would, no doubt, compel the men to abandon the manufacture of salt.                                                                                                                                                                                                   |
|                                                                                                                                                                                                                                                                         | 32. Foreign salt is now brought to Huntingdon, by way of the Pennsylvania canal from Philadelphia; Huntingdon is about 20 miles from these works.                                                                                                                              |

DOCUMENT 14.—No. 181.—[No. 3].—Continued.

| QUESTIONS.                                                                                  | ANSWERS.                                                                                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 37. Proportion which the production by the American manufacturers bears to the consumption? | 37. It is estimated that the yearly consumption of salt in the United States is ten millions of bushels. Out of this quantity about four millions and a half of bushels are manufactured on the seaboard and in the interior of the country. |

For JACOB DRUM,  
JOHN ROYER.

## DOCUMENT 14.—No. 182.

*Hope Salt Works, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. We manufacture salt on the Kiskiminetos river, Westmoreland county.                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. By horse power.                                                                                          |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1828; at present a joint concern.                                                                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. From five to six thousand dollars.                                                                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Answered in the above.                                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Have not averaged more than 12 per cent.                                                                 |
| 7. Causes of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                               | 7. The competition and reduction of duty on foreign salt have reduced the profit materially.                |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. The works make, annually, 10,000 bushels of salt, equal to any imported.                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Owing to the reduction of the duty on foreign salt, the domestic will soon come to 25 cents per bushel. |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. There are six men at \$20 per month, and feed and clothe twenty-six men, women and children.            |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. The works go night and day, (Sundays excepted); the boilers work, each, 12 hours.                       |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Farmers don't pay, by five dollars per month, as much as we pay at the works.                           |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. All the salt exported sent to Pittsburgh market.                                                                         |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. The salt sold at the works is generally for trade, the produce of the neighborhood.                                      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. A duty on foreign salt of 25 cents per bushel would enable the manufacturers of domestic to come in competition with it. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. Believe all the materials the produce of the United States.                                                              |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. All domestic, except some coffee and tea.                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Should the duty be taken off foreign salt, all the works in Western Pennsylvania must stop.                              |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. The high water last winter took off the amount.                                                                          |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Don't know of any.                                                                                                       |

HORN SALT WORKS, April 28, 1832.

SAMUEL TALMADGE.  
ROBERT CRISWELL.

N. B. Another works as above in value.

Hill's, with a steam engine; and another going into operation, a joint concern. Lynch & Wilson's, two horses, and the same number of hands as stated above.

## DOCUMENT 14.—No. 183.

*Salt Manufactory, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                              |
|--------------------------------------------------------------------------------------|-------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. In Westmoreland county, and State of Pennsylvania. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Salt works; horse power.                           |
| 3. When established; and whether a joint stock concern?                              | 3. In 1822, and is a joint stock concern.             |

## DOCUMENT 14.—No. 183—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                        | ANSWERS.                                                                      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                   | 4. \$2,500.                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                   | 5. \$500.                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. \$500; no portion of the capital borrowed.                                 |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                             | 7. An increase arising from a more abundant supply of materials.              |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                    | 8. About six per cent.                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                             | 9. 3,500 bushels, at 40 cts. per bushel.                                      |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                   | 10. 1,500 bushels of coal, at 2 cents per bushel.                             |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                   | 11. Unable to say.                                                            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                 | 12. 3 men, at \$100 per annum.                                                |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                  | 13. Average 12 hours per day all the year.                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                  | 14. About \$100 per annum.                                                    |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                   | 15. 2 horses.                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                         | 16. Generally at the works; if not in the distance of 20 miles.               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                        | 17. No.                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                          | 18. In Westmoreland and Alleghany counties.                                   |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                          | 19. No.                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                        | 20. Generally bartered for produce.                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                        | 21. An increase. See No. 7.                                                   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                              | 22. Average 50 cents per bushel retailing, and 40 cents per bushel wholesale. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Unable to answer.                                                                 |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Unable to answer.                                                                 |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. \$500; a dividend of 10 per cent.                                                 |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. \$600 worth of agricultural productions.                                          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. It might not cause us to abandon our business, but it would injure us materially. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. We are out of foreign competition: extent of that circle is perhaps 100 miles.    |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. \$3,000; no borrowed capital.                                                     |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                                                                                                | 34. Unable to answer.                                                                 |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                                                                                           | 35. Unable to answer.                                                                 |
| 36. What would be the operation of this change upon the frauds at present supposed to practised?                                                                                                                                                                                                                                           | 36. Unable to answer.                                                                 |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                                                                                                | 37. Unable to answer.                                                                 |
| 38. Extent of individual or household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                                                                                            | 38. Unable to answer.                                                                 |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                                                                                               | 39. Unable to answer.                                                                 |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                                 | 40. Unable to answer.                                                                 |

N. B.—There is one other salt works on the Youghiogony river, in this county, but they are not in operation at present, and it is very doubtful whether they will ever be put in operation. There are also four salt works in operation on the Sewickly creek, whose report I have not received. At present 4 wells are boring upon that creek. EDW. JOHNSTON.

## DOCUMENT 14.—No. 184.

*Alleghany Salt Works, Westmoreland County, West Pennsylvania.*

## QUESTIONS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established; and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power, and in machinery?
5. Average amount in materials, and in cash for the purchase of materials and payment of wages?
6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?
7. Cause of the increase (or decrease, as the case may be) of profit?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?
12. Number of men, women, and children employed, and average wages of each class?
13. How many hours a day employed; and what portion of the year?
16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?
17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?
22. The prices at which the manufactures have been sold by the manufacturer since the establishment?
23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?
27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?
29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

## ANSWERS.

1. In Westmoreland county, and State of Pennsylvania.
2. Steam power.
3. Donnelly's established in 1828, and is an individual concern. Weaver's established in 1830, and is a joint stock concern.
4. Donnelly's capital invested is \$4,000. Weaver's, \$4,000.
5. Donnelly's amount in materials, &c. \$2,000 per annum. Weaver's, \$2,000.
6. Our profits, since commencement, will amount to \$800 per annum.
7. A decrease at present arising from an overstocked market.
9. 1,680 barrels per annum, at \$2 per barrel. No. 1 is worth \$2; No. 2 is worth \$1 87½; No. 3 is worth \$1 75.
10. 6,200 bushels of coal, at 1½ cents per bushel.
12. Six men, at \$21 per month.
13. Average about twelve hours per day throughout the year.
16. Generally at Pittsburgh and Cincinnati, and also to Louisville. Pittsburgh is about 28 miles from these works, and Cincinnati about 500.
17. Foreign salt is brought to Louisville.
22. In 1828 and in 1830 salt sold at these works at the rate of 75 cents per bushel, and, at the present time, at the low rate of 37½ cents.
23. A duty of about 25 cents per bushel, &c.
27. About \$1,200 worth per annum of agricultural and domestic productions.
29. This would compel us to abandon the manufacture of salt altogether in this section of the country.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                   | 30. In the manufacture of paper, iron or in agriculture. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                      | 32. Answered by No. 17.                                  |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                     | 33. Unable to reply to this question.                    |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual the reduction should be?                                        | 34. Ditto. Ditto.                                        |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. Ditto. Ditto.                                        |
| 36. What would be the operation of this change upon the frau's at present supposed to be practised?                                                                                                              | 36. Ditto. Ditto.                                        |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. Ditto. Ditto.                                        |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                 | 38. Ditto. Ditto.                                        |
| 39. Average profit of money or capital in the United States?                                                                                                                                                     | 39. Ditto. Ditto.                                        |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. Ditto. Ditto.                                        |

N. B.—Gaulinger, Carns, & Donnel's salt works on the Alleghany, below Freeport, will average about 3,600 lbs. of salt manufactured per annum, at \$2 per barrel, amounting in materials, &c., per annum, to about \$1,800. They were established in 1822. The other necessary queries, as they respect these works, are answered in Messrs. Donnelly's and Weaver's statements.

P. S.—Walters has commenced on the Alleghany, but it is so recently that he can give me no information whatever.

EDWARD JOHNSTON.

## DOCUMENT 11.—No. 185.

*Paper Manufactory, Fallston, Beaver County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                           |
|--------------------------------------------------------------------------------------|----------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Pennsylvania, Beaver county.                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Paper manufactory; propelled by water power.    |
| 3. When established; and whether a joint stock concern?                              | 3. Established in 1826, and a joint stock concern. |

## DOCUMENT 14.—No. 185—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                       | ANSWERS.                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                  | 4. Nineteen thousand dollars.                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                  | 5. Consume 166,000 lbs. rags annually.                |
| 6. Annual rate of profit on capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About 6½ per cent.                                 |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                          | 7. Competition.                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                            | 9. Paper, about \$15,000 per annum.                   |
| 12. Number of men, women, and children, employed; and average wages of each class?                                                                                                                                                                                                               | 12. 10 men, 23 women, and 5 boys.                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                  | 15. Three horses.                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                        | 16. At Pittsburgh and the western country in general. |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                         | 19. No.                                               |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                       | 23. The present tariff.                               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                          | 29. Yes.                                              |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                       | 40. Men \$6 per week; women \$1 75; and boys \$1 50.  |

JOHNSTON &amp; STOCKTON.

## DOCUMENT 14.—No. 186.

*Sharpless & Co's. Paper Mill, Columbia County, West Pennsylvania.*

| QUESTIONS.                                                | ANSWERS.                          |
|-----------------------------------------------------------|-----------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Pennsylvania, Columbia county. |
| 2. Kind or description of the manufactory?                | 2. Paper mill; water power.       |
| 3. Capital invested in ground and buildings?              | 3. Twenty-one thousand dollars.   |

## DOCUMENT 14.—No. 186—Continued.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Six thousand dollars.                                                                                                   |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Not to exceed one per cent.                                                                                             |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. The markets being glutted, from the quantity of paper imported, and the income of factories in the United States.       |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. About 900 reams of foolscap, 1000 lbs of printing paper, good quality; foolscap \$5 per ream, printing \$3 50 per ream. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. 20 tons of rags, at 6 cents per lb.                                                                                     |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. About seven men and eight women; men at \$20 per month; women at \$1 20 per week.                                      |
| 11. How many hours a day employed; and what portion of the year?                                                                      | 11. About eight hours per day; about ten months in the year.                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Part sold in the neighborhood, and a part sent to Philadelphia, distance 120 miles.                                    |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 13. In Philadelphia the competition has been so great as to take off our profits entirely.                                 |
| 14. Where are the manufactures consumed?                                                                                              | 14. In the United States.                                                                                                  |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. None exported.                                                                                                         |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Some for cash; some bartered for materials; and some at 6 and 9 months' credit.                                        |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. Foolscap has fallen \$1 25 per ream; printing paper has fallen \$1 per ream, and a reduction in materials.             |
| 19. What has been the rate of your profits, annually, for the last three years?                                                       | 19. About one per cent.                                                                                                    |
| 20. Amount of capital?                                                                                                                | 20. Refer to answers to questions 3 and 4.                                                                                 |
| 21. Average rate of wages?                                                                                                            | 21. Answered in question 10.                                                                                               |

## DOCUMENT 14.—No. 187.

*Straw Paper Mill, Crawford County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                     |
|--------------------------------------------------------------------------------------|----------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Meadville, Crawford county, Pennsylvania. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Straw paper mill; water power.            |
| 3. When established; and whether a joint stock concern?                              | 3. 1828. Individual concern.                 |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$16,000.                                                                                                                                                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$3,122.                                                                                                                                                                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. 30 per cent., no money borrowed.                                                                                                                                        |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. No material change.                                                                                                                                                     |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Thirty-three per cent.                                                                                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. \$9,000, or 9,200 reams of crown wrapping, at \$1 per ream, equal to 9,200 lbs. of book boards, at 5 cents per lb., or any other paper in proportion to the weight, &c. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 92 tons of straw, at \$5 per ton; and 22,080 lbs. salts of lye, at 3 cents, \$662 40, making together \$1,122 40, all domestic.                                        |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. None imported.                                                                                                                                                         |
| 12. Number of men, women, and children, employed; and average wages of each class?                                                                                                                                                                                                                   | 12. 8 men and 3 girls; men \$225 per annum, girls \$75 per annum.                                                                                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. 14 hours, all the year.                                                                                                                                                |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Correspond, generally, with the wages as stated above.                                                                                                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 2 horses, $\frac{1}{4}$ of the year, would be a proper proportion of the time actually engaged.                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Market made principally north and south from 300 to 500 miles.                                                                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. I know of no foreign article of the kind in the same market.                                                                                                           |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the United States.                                                                                                                                                  |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. None exported.                                                                                                                                                         |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                                                          | 20. Generally bartered; north, for lake fish, &c.; south, for tobacco, cordage, rice, nails, glass, &c. &c.                                                                |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                         | 21. No material change.                                                                                                                                                    |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. Will average from 5 to 6 cents per lb.                                                                                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Per centage, so as to prevent importation.                                                                                                                                                                                                                                  |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. I do not know.                                                                                                                                                                                                                                                              |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. From 25 to 30 per cent.; all goes to carry on the establishment.                                                                                                                                                                                                            |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. The hands finding themselves: it is presumed their expenses in provisions and clothing is equal to their wages as stated above; and all is of the production of the country principally.<br>28. 30,000 reams in Pennsylvania, and in the United States about 140,000 reams. |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 29. If imported, we cannot manufacture to advantage.                                                                                                                                                                                                                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 30. I do not know at present: it no doubt would be very injurious.                                                                                                                                                                                                              |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 31. I do not know; I would have to abandon the paper business, and continue engaged in trade as usual.                                                                                                                                                                          |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 32. Do not know.                                                                                                                                                                                                                                                                |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 33. Ditto.                                                                                                                                                                                                                                                                      |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 34. Ditto.                                                                                                                                                                                                                                                                      |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                                                                                                                                                                | 35. Ditto.                                                                                                                                                                                                                                                                      |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                                                                                           | 36. Ditto.                                                                                                                                                                                                                                                                      |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                 |

| QUESTIONS.                                                                                                                        | ANSWERS.         |
|-----------------------------------------------------------------------------------------------------------------------------------|------------------|
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                       | 37. Do not know. |
| 38. Extent of individual and household manufactures in the United States, and how much it has increased since the tariff of 1824? | 38. Ditto.       |
| 39. Average profit of money or capital in the United States?                                                                      | 39. Ditto.       |
| 40. Average rate of wages?                                                                                                        | 40. Ditto.       |

WM. MAGAW.

## DOCUMENT 14.—No. 188.

*Paper Manufactory, Erie County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Erie county.                                                                                                                                       |
| 2. Kind or description of the manufactory?                                                                                            | 2. Paper manufactory.                                                                                                                                               |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Six thousand dollars.                                                                                                                                            |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Amount of materials used \$3,500, probably half purchased with cash. Cash paid for wages \$2,000.                                                                |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Average amount manufactured \$10,100, printing paper, writing and wrapping paper; printing, value \$4 50 per ream; writing, value \$3 50 per ream; wrapping \$1. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. 30 tons of rags, at \$100 per ton; sundry other materials: all domestic products.                                                                                |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. 5 men, \$1 per day; 6 women \$1 75 per week.                                                                                                                    |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. 12 hours per day in summer, 9 in winter: employed the whole year.                                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. At the manufactory and its vicinity.                                                                                                                            |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 13. No competition of foreign articles.                                                                                                                             |
| 14. Where are the manufactures consumed?                                                                                              | 14. In this vicinity.                                                                                                                                               |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                             | 15. Not any.                                                                                                                                                        |
| 16. Whether the manufacture is sold by the manufacturer for cash? if on a credit, at what credit? if bartered, for what?              | 16. For cash and rags.                                                                                                                                              |
| 19. What has been the rate of your profits annually for the last three years?                                                         | 19. After deducting contingent expenses, about \$3,000.                                                                                                             |

B. PELTON.

## DOCUMENT 14.—No. 189.

*Paper Mill, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Fayette county, Pennsylvania, Foygheny river.                                                                                                                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Two-vat paper mill; water power.                                                                                                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1830; joint stock concern.                                                                                                                                                       |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                       | 4. \$10,000.                                                                                                                                                                        |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$8,677; about one-half in cash, balance bartered.                                                                                                                               |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Allow \$800 interest on capital invested, \$600 for manager and clerk, \$300 for wear and tear of machinery, leaves a small profit, if any: we know nothing of borrowed capital. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Decrease, owing to competition.                                                                                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 2,400 reams of cap at \$2 50, \$6,000; printing paper, 700 reams at \$4, \$2,800; 800 reams wrapping, average \$1; 100 granite net boards at \$4 25, \$425 00—\$10,025.          |
| 10. Quantity and value of different kinds of raw material used; distinguishing between foreign products and domestic products?                                                                                                                                                                       | 10. 60,000 lbs. rags at 6 cents, \$3,600; 5,000 lbs. scraps at 4, \$200; alum and indigo \$60, \$3,860.                                                                             |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. Eight men at \$4 75 per week, 10 boys at \$1 78 per week, 17 girls at \$1.                                                                                                      |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. The work goes all the time; 12 hours.                                                                                                                                           |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. One three-horse team collecting stock and selling paper.                                                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. One-third at home; balance sent to Pittsburgh, Wheeling, &c.                                                                                                                    |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Through the western country.                                                                                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. None.                                                                                                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. One-fourth part for cash at a credit of six months; the balance bartered for stock, merchandise, provisions, &c.                                                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                          | 21. Not much variation since we commenced.                                                                                                                                          |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. Cap from 2 to \$3, printing \$3 50 to \$4 75 per ream.                                                                                                                          |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                           | 23. Prohibition to the foreign article. American enterprise and competition will reduce it as low as can be afforded.                                                               |

## DOCUMENT 14.—No. 189—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 25. What has been the rate of your profits, annually, for the last three years? and, if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. As yet we have declared no dividend; see no prospect of profit, home competition having made the business poor. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                            | 27. \$1,500, agriculture; \$3,800, rags and scraps.                                                                 |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                     | 29. It certainly would, for it is a <del>nausea</del> business now.                                                 |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                              | 30. Our capital would be lost in buildings and machinery.                                                           |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                               | 31. Yes; <del>grubbing</del> and raising stock.                                                                     |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                 | 32. We think not.                                                                                                   |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                                  | 40. From 7 to \$9, common laborers.                                                                                 |

JOSEPH TREVOR &amp; CO.

## DOCUMENT 14.—No. 190.

*Redstone Paper Mill, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                      | ANSWERS.                                      |
|-------------------------------------------------------------------------------------------------|-----------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. State of Pennsylvania, Fayette county.     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?            | 2. Paper mill; water power; two vats.         |
| 3. When established, and whether a joint stock concern?                                         | 3. Established in 1799; joint concern.        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                 | 4. Capital invested \$10,000.                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. \$6,750 per annum for wages and materials. |

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. First ten years 10 per cent., succeeding ten years 7½ per cent., last ten years 5 per cent.          |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                  | 7. Decrease of profit owing to increased competition at home.                                           |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                           | 8. From 25 per cent. to 33 a 40 per cent.                                                               |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                    | 9. \$10,000 per annum; writing, printing and wrapping paper.                                            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                          | 10. 35 tons domestic rags, at \$100 per ton.                                                            |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                          | 11. Imported from England at about 5 per cent. less, but inferior.                                      |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                         | 12. 11 men at \$250 per year, 20 a 25 females at 52 a \$75 per annum.                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                         | 13. Eight hours per day, throughout the year.                                                           |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                         | 14. About equal in our country, 10 per cent. less abroad.                                               |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                          | 15. Five horses constantly employed.                                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                | 16. Not vended at the factory, but sold in every section of our country.                                |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                               | 17. None of the foreign article in the west.                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                 | 18. Wherever there is business or circulation.                                                          |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                 | 19. None exported from the west.                                                                        |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                               | 20. No sales for cash; bartered for any thing we can get.                                               |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                              | 21. Ten per cent. increase of cost in the ten years: increase arises from increased value of materials. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                     | 22. From \$4 80 per ream to \$10, and down to 75 cents.                                                 |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                               | 23. Left to the wisdom of Congress.                                                                     |
| 25. What has been the rate of your profits, annually, for the last three years? and, if it be a joint stock company, what divi-                                                                                                                                                                          | 25. About 5 per cent.; joint stock, none.                                                               |

| QUESTIONS.                                                                                                                                                                                                                                                                                            | ANSWERS.                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| <p>dends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p>                                                                                  |                                                                                                                     |
| <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                                                   | <p>26. Raw material <math>\frac{1}{2}</math>, wages <math>\frac{1}{4}</math>, capital <math>\frac{1}{4}</math>.</p> |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                               | <p>27. Total amount of wages, with the addition of 25 per cent.</p>                                                 |
| <p>28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?</p>                                                                                                                                                           | <p>28. Not able to answer.</p>                                                                                      |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12<math>\frac{1}{2}</math> per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> | <p>29. Could not continue in the business; must abandon it.</p>                                                     |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                                                 | <p>30. In buying and selling the foreign article.</p>                                                               |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?</p>                                                                                                                    | <p>31. The amount in capital might be employed in any thing else to a better advantage.</p>                         |
| <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                                                                                                   | <p>33. Capital employed about \$10,000.</p>                                                                         |
| <p>37. Proportion which the production by the American manufacturers bears to the consumption?</p>                                                                                                                                                                                                    | <p>37. Manufactures equal to the consumption.</p>                                                                   |
| <p>38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?</p>                                                                                                                                                               | <p>38. Increased since 1824 75 per cent.</p>                                                                        |
| <p>40. Average rate of wages?</p>                                                                                                                                                                                                                                                                     | <p>40. From 8 to \$10, common labor.</p>                                                                            |

REDSTONE PAPER MILL, 1832.

SHEARPLESS &amp; CO.

## DOCUMENT 14.—No. 191.

*John McCahan's Paper, Grist, and Oil Mills, Laurel Spring, Huntingdon County, West Pennsylvania.*

| QUESTIONS.                                                       | ANSWERS.                                               |
|------------------------------------------------------------------|--------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p> | <p>1. State of Pennsylvania, county of Huntingdon.</p> |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2. Kind or description of the manufactory?                                                                                                 | 2. Paper mill, grist mill, and oil mill, at Laurel Spring, near the Borough of Bingham.                                                                                                                                                                                                                                                                                    |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Ten thousand dollars.                                                                                                                                                                                                                                                                                                                                                   |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. The paper mill uses one ton and a half of rags per month, for which we pay \$1.50, wages to six men 75 cents each per day, and they find themselves, or 50 cents and four girls, 50 cents per day and they find themselves, or 25 and found; oil 14 gallons to one bushel of flaxseed.                                                                                  |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. On paper 25 per cent; on oil 25 cents.                                                                                                                                                                                                                                                                                                                                  |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Profits on paper have materially increased, in consequence of mills being a operation which manufacture altogether by machinery, and dispense with manual labor. Laurel Spring mills do not dispense with the manual labor. Profits of oil have decreased, owing to the increased price of raw materials, and not a proportionate increase in the manufactured article. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Paper manufactured of every description, and various qualities. Don't know the amount.                                                                                                                                                                                                                                                                                  |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Previously answered as to quantity and value; products altogether domestic.                                                                                                                                                                                                                                                                                             |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. Previously answered.                                                                                                                                                                                                                                                                                                                                                   |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Every day, (Sundays excepted), about ten hours each day.                                                                                                                                                                                                                                                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Consumed in the county.                                                                                                                                                                                                                                                                                                                                                |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Paper enters into competition to some considerable extent; no competition in oil.                                                                                                                                                                                                                                                                                      |
| 14. Where are the manufactures consumed?                                                                                                   | 14. Answered.                                                                                                                                                                                                                                                                                                                                                              |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. No.                                                                                                                                                                                                                                                                                                                                                                    |
| 16. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                | 16. Generally on credit and barter.                                                                                                                                                                                                                                                                                                                                        |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Various prices.                                                                                                                                                                                                                                                                                                                                                        |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. We will be satisfied with the result of legislation.                                                                                                                                                                                                                                                                                                                   |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. About 25 per cent.                                                                                                                                                                                                                                                                                                                                                     |

JOHN McCABAN.

## DOCUMENT 14.—No. 192,

*Messrs. Alexander & Co.'s Paper Mill, Luzerne County, Western Pennsylvania.*

## ANSWERS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established, and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power, and in machinery?
5. Average amount in materials, and in cash for the purchase of materials and payment of wages?
6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?
7. Cause of the increase (or decrease, as the case may be,) of profit?
8. Rates of profit on capital otherwise employed in the same State and county?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?
12. Number of men, women, and children employed, and average wages of each class?
13. How many hours a day employed; and what portion of the year?
15. Number of horses or other animals employed?
16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?
20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?
22. The prices at which the manufactures have been sold by the manufacturer since the establishment?
29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

## QUESTIONS.

1. State of Pennsylvania, Luzerne county.
2. Paper manufactory, with water power.
3. Came into the present proprietors' hands in 1830; is a joint stock concern.
4. Amount for which the land and buildings were purchased, say \$5,000.
5. Materials yearly, \$2,500; pay of wages, \$750.
6. The last year \$1,100.
7. Not known.
8. From 6 to 20 per cent.
9. 1,500 reams imperial, printing, \$3 75, \$3 50, \$3 00, \$2 50.
10. Rags from 4 to 8 cents per pound, domestic, 20 tons.
12. Men, 5; 6 women, and 1 boy.
13. 6 hours per diem throughout the year.
15. 2 horses.
16. A portion at the manufactory; the balance 120 miles from it.
20. At home, for cash and rags; 6 months' credit in Philadelphia.
22. The same as above stated.
29. Must undoubtedly abandon.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Westmoreland county, Pennsylvania.                                                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Paper manufactory; steam power.                                                                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established 20 years, and a joint concern.                                                         |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. 8 or \$9,000.                                                                                      |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. 10 or \$12,000.                                                                                    |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. At the rate of 18 per cent. on the money invested.                                                 |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. Increase of profit was occasioned by tariff.                                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. The amount manufactured has been about \$15,000 per annum.                                         |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. No foreign materials used; all domestic.                                                          |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. About 20 men and women; men about \$4 50, and women about \$1 25.                                 |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Men generally employed about 7 hours the whole year.                                              |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Laboring men about \$10 to \$12 per month for farming.                                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 6 horses generally employed in hauling coal, rags, and paper.                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. We mostly send our paper to Pittsburgh, and there sold by agents.                                 |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. No foreign paper to our knowledge enter in competition where we make any, where we manufacture.   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Mostly is consumed in the western country, viz. Ohio, Kentucky, Tennessee, &c.                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Commonly sold on a credit of 3 and 6 months; if sold for cash have to make considerable discount. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                          | 21. The price of paper is decreased on account of the quantity manufactured in the State to the east. |

| QUESTIONS.                                                                                           | ANSWERS.                                                                                                                      |
|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment? | 22. Paper generally been sold, of our manufacture, say No. 1 \$3 50, No. 2 \$3 00, No. 3 \$2 50; coarse papers in proportion. |

The other queries we cannot satisfactorily answer.

G. B. & C. P. MARKS.

Messrs. LYNCH & FOSTER.

GENTLEMEN: I have received this paper but this moment. I send it to you, thinking it may be of some service; and, hoping it may be so,

I remain yours, respectfully,

EDWARD JOHNSTON.

May 1st, 1832.

N. B. This is the only paper mill in the county.

E. J.

## DOCUMENT 14.—No. 194.

Glass, Alleghany County, West Pennsylvania.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Alleghany county, Pennsylvania.                                                                                                                                                                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Flint glass; steam power is used for cutting glass and pulverizing materials.                                                                                                                                        |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1827; a private company.                                                                                                                                                                              |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Upwards of \$30,000, and the ground on perpetual lease.                                                                                                                                                              |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Materials, fuel, and labor, cost above \$30,000.                                                                                                                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. None of our capital is borrowed; the remainder is private.                                                                                                                                                           |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. A strong domestic competition has reduced both price and profit considerably.                                                                                                                                        |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Of this we are ignorant.                                                                                                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. We make upwards of \$40,000 worth of all articles of flint glass.                                                                                                                                                    |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Answered in No. 5. Our materials, such as pearlash, lead, sand, and clay, are all the produce of domestic labor.                                                                                                    |
| 11. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. We employ in the factory 20 men and 16 boys, besides giving a great deal of work to various subsidiary tradesmen in town. The wages vary from 5 to 20 dollars per week for men, and from \$1 50 to \$3 50 for boys. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Steady day and night.                                                                                                                                                             |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. As No. 8.                                                                                                                                                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. One horse for draught.                                                                                                                                                            |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Chiefly at the factory, and by wagon in town.                                                                                                                                     |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. None we believe at present.                                                                                                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Through all the country west of the mountains.                                                                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. None by ourselves; but we believe eastern manufacturers export a considerable quantity.                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Chiefly on a credit of about 6 months.                                                                                                                                            |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. Nearly stationary, except lead, which has lately risen in price.                                                                                                                  |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. There has been a gradual decline in the price for some years.                                                                                                                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. We consider the present rate of duty essentially necessary, as keeping down the price by domestic competition, which will be destroyed by any considerable reduction of the duty. |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Unable from our local situation to answer.                                                                                                                                        |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. See questions No. 3 and No. 6.                                                                                                                                                    |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. See question No. 5. We consider the profit of our business depends as much upon our own labor as interest of capital.                                                             |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. We have nearly 20 families depending upon us, but as we pay them in cash, we cannot say how they lay it out.                                                                      |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Cannot say.                                                                                                                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make                                                                                                                                                                                                                                                           | 29. Undoubtedly it would cause us to abandon it, or rather it would abandon us.                                                                                                       |

| QUESTIONS.                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p>                           |                                                                                                                                                                                                                                                                                                              |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                   | <p>30. In this case our buildings, furnace; ovens, machinery, tools, utensils, &amp;c. would be completely valueless; our book debts difficult or impossible to collect, and ourselves unable to meet the demands against us, that "the benefit of the act" and the poor-house appear our only resource.</p> |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p>                                                    |                                                                                                                                                                                                                                                                                                              |
| <p>32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p>                      |                                                                                                                                                                                                                                                                                                              |
| <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                     |                                                                                                                                                                                                                                                                                                              |
| <p>34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction should be?</p>                                      |                                                                                                                                                                                                                                                                                                              |
| <p>35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?</p> |                                                                                                                                                                                                                                                                                                              |
| <p>36. What would be the operation of this change upon the frauds at present supposed to be practised?</p>                                                                                                              | <p>These questions we feel incompetent to answer.</p>                                                                                                                                                                                                                                                        |
| <p>37. Proportion which the production by the American manufacturers bears to the consumption?</p>                                                                                                                      |                                                                                                                                                                                                                                                                                                              |
| <p>38. Extent of individual or household manufacture in the United States, and how much it has increased since the tariff of 1824?</p>                                                                                  |                                                                                                                                                                                                                                                                                                              |
| <p>39. Average profit of money or capital in the United States?</p>                                                                                                                                                     |                                                                                                                                                                                                                                                                                                              |
| <p>40. Average rate of wages?</p>                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                              |

## DOCUMENT 14.—No. 195.

*Glass Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                  | ANSWERS.                                                           |
|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p>                            | <p>1. Pennsylvania, county of Alleghany.</p>                       |
| <p>2. Kind or description of the manufactory; and whether water, steam, or other power?</p> | <p>2. Flint glass of all descriptions; steam where applicable.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1808; not a joint stock concern.                                                                                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. One hundred thousand dollars.                                                                                                                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. The whole paid in cash.                                                                                                                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. No part of the capital is borrowed.                                                                                                           |
| 7. Cause of increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                    | 7. Prices have decreased, partly owing to competition, and partly to increased skill in the manufacture.                                         |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Unable to say.                                                                                                                                |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Has varied from 20,000 to \$100,000.                                                                                                          |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Of lead, annually, about 80,000 lbs.; pearl ashes about the same; sand, 150 tons; wood, 50 cords; fuel, 50,000 bushels: all domestic.        |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Unknown as to value; England, and Germany, some from France.                                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. About 60 persons; wages varying from \$1 50 to \$14 per week.                                                                                |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. From 10 to 12 hours, all the year round.                                                                                                     |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Unknown.                                                                                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. One horse, occasionally two.                                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Part are sold at the factory; part sent through the western States.                                                                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. Foreign glass, on which a bounty is paid on exportation, comes into competition with flint glass.                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Principally in the western country.                                                                                                          |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. Have not exported glass to foreign countries.                                                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Generally on a credit of 6 months.                                                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                          | 21. The expense of manufacture has decreased by introducing machinery and employing apprentices. The prices of materials have varied but little. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. The prices, since the commencement of the establishment have been reduced from 33½ to 50 per cent.                                           |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 23. Exclusive of foreign bounties, twenty-five per cent. would suffice.                                                                                   |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                           | 24. If flint glass was subject to a specific duty of four cents, and the present ad valorem duty abolished, it is believed frauds would not be committed. |

As most of the queries subsequent to No. 24 have been previously answered, or we are unable to answer them, it is not deemed important to notice them.

BAKEWELL, PAGE, & BAKEWELL.

## DOCUMENT 14.—No. 196.

*Brownsville Glass Works, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufacture is situated?                                                                             | 1. Fayette county, Pennsylvania.                                                                            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Window glass and glassware.                                                                              |
| 3. When established; and whether a joint stock concern?                                                                               | 3. About the year 1827; a joint concern.                                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Seven thousand dollars.                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 5. Eighteen thousand five hundred dollars.                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 4,500 boxes window glass, at<br>\$4 per box - \$18,000<br>\$2,000 worth of glassware - 2,000<br>\$20,000 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. 27 men and boys, average \$7,250 per annum.                                                             |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. From 8 to 12 hours per day; 11 months per year.                                                         |
| 15. Number of horses or other animals employed?                                                                                       | 15. 2 horses.                                                                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. We do not find a market at the factory, nor at a less distance than two or three hundred miles.         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 17. Foreign glass comes into competition at the eastern markets.                                            |
| 18. Where are the manufactures consumed?                                                                                              | 18. Principally in the East, Baltimore, and Philadelphia.                                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?           | 20. Principally sold on a credit at from 3 to 6 months.                                                     |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Glass has decreased since 1827 about ten per cent.; materials have increased about six per cent. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. 8 dollars per hundred feet 18-15 and all other sizes in proportion.                              |
| 40. Average rate of wages?                                                                                                                                                                                                                                 | 40. See answer to query 12th.                                                                        |

*Glass Manufactory, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Fayette county.                                                                                                                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Window glass.                                                                                                                                                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. 4,500 dollars.                                                                                                                                                                          |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 7. Home competition was the cause of decrease.                                                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 4,000 boxes window glass at \$3 25 cents per box.                                                                                                                                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. Wood \$600; sand \$250; stone \$120; ashes \$400; brick \$100; plank \$400; potash \$200; potash \$3,500; coal, \$1,200; and German clay \$700.                                        |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. 8 blowers; 85 cts. for blowing 100 window glass; 7 hands at \$18 per month; 8 boys at \$4 per month; 3 coal diggers, at 1 wagoner at 16 per month each; 2 glass cutters at 18 per box. |
| 15. Number of horses or other animals employed?                                                                                       | 15. 6 horses.                                                                                                                                                                              |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. 30 miles.                                                                                                                                                                              |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 17. They do not.                                                                                                                                                                           |

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. Supposed chiefly in the United States.                                   |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                   | 19. Ditto. Ditto.                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Merchandise, cash, and materials.                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Decreased.                                                               |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                            | 27. 2,000 dollars agricultural productions; \$5,400 other domestic products. |

MARTIN &amp; BAKER.

PERRYTOPOLIS, April 17, 1832.

## DOCUMENT 14.—No. 198.

*N. & P. Swearer's Bridgeport Glass Works, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Fayette county, Pennsylvania.                                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Window glass and green glassware.                                                                                           |
| 3. When established, and whether a joint concern?                                                                                     | 3. In and about 1811; joint concern.                                                                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. To the men now carrying on unknown, but suppose it to have cost \$15,000.                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Eighteen thousand dollars.                                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. For the last eight years 4,500 boxes per year, at \$4 per 100 feet, \$18, and \$2,000 worth of ware; prior to that unknown. |
| 12. Number of men, women and children employed, and average wages of each class?                                                      | 12. 27 men and boys, average per annum 7,300.                                                                                  |
| 13. How many hours a day employed, and at what portion of the year?                                                                   | 13. From 8 to 13 hours per day, 11 months in the year.                                                                         |
| 15. Number of horses or other animals employed?                                                                                       | 15. One horse.                                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                                 | 16. No market at home; shortest distance to a market say 300 miles.                                                            |
| 17. Whether foreign articles of the like kind enter into competition with them at a place of sale, and to what extent?                | 17. A competition at the eastern markets.                                                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Louisville, Ky., Baltimore, Md., Philadelphia, Pa.                                                                                                                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                  | 19. Unknown.                                                                                                                                                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Glass has sold at the establishment when first put into operation, at \$14 per 100 feet, 8 by 10; but at present—(see answer to query 9th, as to increase or decrease on materials unknown.) |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. See answers to queries 9 and 21.                                                                                                                                                             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. Eight dollars per 100 feet for 10 by 14 glass; and all other sizes, above and below, in proportion; glassware likewise.                                                                      |
| 40. Average rate of wages?                                                                                                                                                                                                                                 | 40. Answered by query 12.                                                                                                                                                                        |

BRIDGEPORT GLASS WORKS, April 18, 1832.

N. & P. SWEARD,  
By JAMES REYNOLDS, Jr.

## DOCUMENT 14.—No. 199.

*S. C. Bever & Co.'s Glass Works, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                        |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Fayette county, Pennsylvania.                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Window glass and glassware.                  |
| 3. When established, and whether a joint stock concern?                                                                               | 3. About the year 1820; a joint concern.        |
| 4. Capital invested in ground and buildings, and in machinery?                                                                        | 4. About twenty thousand dollars.               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Twelve thousand five hundred dollars.        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About 3,500 boxes glass, at \$4.             |
| 12. Number of men, women and children employed, and average wages of each class?                                                      | 12. Men and boys, 27, average \$7.16 per annum. |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. From 8 to 12 hours per day, say 11 months.  |
| 15. Number of horses or other animals employed?                                                                                       | 15. Five horses.                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. We do not find a market at home.            |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                 | 17. The foreign article comes in competition east.             |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Principally in the east.                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Principally sold on credit at from four to six months.     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. The price of glass decreased, and the materials increased. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. Eight dollars per 100 feet 10 by 12 window glass.          |
| 40. Average rate of wages?                                                                                                                                                                                                                                 | 40. See answer to query 12.                                    |

REDSTONE GLASS WORKS, *April 14, 1832.*

## DOCUMENT 14.—No. 300.

*Glass Manufactory, Green County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Green county, State of Pennsylvania.                                                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Green window glass.                                                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Original works established about 35 years since; present firm a joint stock concern, established two years since.   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. The value of the factory and real property attached to it, and occupied by hands, &c., may be estimated at \$8,000. |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About \$10,000.                                                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Annual profit of the establishment, say \$2,000.                                                                    |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Domestic competition perhaps the greatest cause.                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About 4,000 boxes green window glass.                                                                               |

| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                            | 10. All the materials used are domestic productions, and may cost at an average of \$4,000.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                         | 12. 18 men and 10 boys; wages, 1st. 1 men at an average of \$450 per annum, 5 at 200, 2 at 150, 1 at 125, and 10 boys at 5 per annum.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                           | 13. Eight hours each day, nine months in the year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 14. Rate of wages of similar classes otherwise employed in the same State and country, in other States, and in foreign countries?                                                                                                                          | 14. From 100 to \$200 per annum, common laborers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. Four.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                  | 16. Pittsburgh is the principal market; some small quantities are sent to the eastern cities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. A portion is disposed of for cash; a portion on a credit, ranging from 3 to 12 months, and a portion in exchange for raw materials and merchandise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. It has steadily decreased in price for the last 10 or 12 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. The glass of the present establishment is disposed of at prices varying from \$3.50 to \$4 per box.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. When this work was first established, being the only one in the western country, the glass was sold readily at from twelve to fifteen dollars per box. Ten or fifteen years after its establishment, the manufactured article had declined to about eight dollars. During the war it was a fraction higher. In the next ten years it fell to about five dollars and during the last eight or ten years it has declined to the prices in answer to query. The numerous factories of this kind springing up in its neighborhood since its establishment, has, no doubt, been the principal cause of the decline in the price of the article. The raw materials necessary for the manufacture, have not fallen in price in the same proportion, but are comparatively higher. |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Alleghany county, city of Pittsburgh.          |
| 2. Kind or description of the manufactory?                                                                                            | 2. Manufacture leather in all its varieties, including morocco. |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Fifteen thousand dollars.                                    |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Can't say.                                                   |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. All kinds of leather, about \$20,000.                        |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. Fifteen men and boys.                                       |
| 11. How many hours a day employed; and what portion of the year?                                                                      | 11. Twelve hours per day.                                       |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. All sold at home; great portion of it is taken west.        |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. None.                                                       |
| 21. Average rate of wages?                                                                                                            | 21. 18 to 30 dollars per month.                                 |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. State of Pennsylvania, Armstrong county.                                    |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Tannery.                                                                    |
| 3. Capital invested in ground and buildings?                                                                                               | 3. One thousand dollars.                                                       |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Nine hundred dollars.                                                       |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Thirty-three per cent.                                                      |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. 150 hides; 125 of sole, best quality, at \$7 each; 125 of upper, worth \$6. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men, at \$12 per month.                                                |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 8 hours per day, and 10 months of the year.                                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Market at the manufactory.                                                 |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. None brought here.                                                         |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In Armstrong county.                                                       |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None.                                                                      |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Cash.                                                                      |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Same as above.                                                             |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. None.                                                                      |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Twenty-eight per cent.                                                     |
| 20. Amount of capital?                                                                                                                     | 20. Nineteen hundred dollars.                                                  |

| 3. Capital invested in ground and buildings?                                                                                               | 3. Five hundred dollars.                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Fifteen hundred dollars.                                                               |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Twenty-five per cent.                                                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. 300 hides: 150 of sole, at \$6, and 150 of upper, at \$2 50 each, of the best quality. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men, at \$10 per month.                                                           |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 10 hours per day, and 10 months per year.                                             |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Market at the manufactory.                                                            |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In this county.                                                                       |
| 15. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                   | 15. None.                                                                                 |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Cash.                                                                                 |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Same as above.                                                                        |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. None.                                                                                 |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Twenty-five per cent.                                                                 |
| 20. Amount of capital?                                                                                                                     | 20. Fifteen hundred dollars.                                                              |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Five hundred dollars.                       |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. 2 men at \$12 per month.                   |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 8 hours per day, and 9 months of the year. |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                        |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In this county.                            |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None.                                      |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Cash.                                      |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Are the same as above.                     |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. None.                                      |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Three hundred dollars.                     |
| 20. Amount of capital?                                                                                                                     | 20. Nine hundred dollars.                      |

Yours, respectfully,

SAMUEL CRAIG

| 2. Kind or description of the manufactory?                                                                                            | 2. Tannery.                                                                                  |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$2,000.                                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$2,000.                                                                                  |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Thirty-three per cent.                                                                    |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 500 hides; 250 of sole, best quality, at \$7; 250 of upper, best quality, at \$4 50 each. |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. 4 men at \$12.                                                                           |
| 11. How many hours a day employed; and what portion of the year?                                                                      | 11. 12 hours per day, and 12 months per year.                                                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Market at the manufactory.                                                               |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 13. None imported.                                                                           |
| 14. Where are the manufactures consumed?                                                                                              | 14. In this county.                                                                          |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. None exported.                                                                           |

| QUESTIONS.                                                                                                                                 | ANSWERS.               |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Cash.              |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. The same as above. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. None.              |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. 33 per cent.       |
| 20. Amount of capital?                                                                                                                     | 20. \$6,000.           |
| 21. Average rate of wages?                                                                                                                 | 21. \$12.              |

Yours, &amp;c.,

A. ARNOLD &amp; Co.

*James Scott, Tunner and Currier, Beaver County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Beaver county, State of Pennsylvania.                |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tanning and currying.                                |
| 3. Capital invested in ground and buildings?                                                                                          | 3. One thousand dollars.                                |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. One thousand dollars.                                |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Twelve and a half per cent.                          |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. Decrease; because of home competition.               |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Not known; the year 1831 about 1,400 dollars' worth. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Hides, bark, and oil, (home produce,) about \$700.   |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Two men.                                            |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. From sunrise to sunset, throughout the year.        |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Sold in Beaver and Alleghany counties.              |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 13. They do not.                                        |

## DOCUMENT 14.—No. 211—Continued.

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                       |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| 14. Where are the manufactures consumed?                                                                                   | 14. Supposed mostly to be consumed where sold.                                 |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                  | 15. None exported.                                                             |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. Quarter cash, the balance for credit and trade.                            |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Sole leather averages 27 cts. per lb. upper do. from 24 to \$30 per dozen. |
| 19. What has been the rate of your profits, annually, for the last three years?                                            | 19. Perhaps about 12½ per cent.                                                |
| 21. Average rate of wages?                                                                                                 | 21. Workmen about \$12 per month.                                              |

JAMES SCOTT.

## DOCUMENT 14.—No. 212.

*M. T. Stokes, Turner and Currier, Beaver County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Beaver county, State of Pennsylvania.                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Tanning and currying.                                   |
| 3. Capital invested in ground and buildings?                                                                                          | 3. About 1,300 dollars.                                    |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. About 500 dollars.                                      |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Nearly 12 per centum.                                   |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                | 6. Decreasing because of the low price of foreign leather. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. About \$600 worth annually.                             |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Hides and bark worth \$230, oil \$30.                   |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Two men, at \$12 per month.                            |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Ten hours, throughout the year.                        |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Sold at home.                                          |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 13. They do not.                                           |

## DOCUMENT 14.—No. 212—Continued.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| 14. Where are the manufactures consumed?                                                                                                   | 14. Principally in this county.                                                              |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                | 16. About one-fourth cash; the rest credit and trade.                                        |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Average 29 cts. per lb. for sole leather, and upper leather averages 27 cents per pound. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Nearly a prohibitory duty.                                                               |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. About 15 per cent.                                                                       |
| 20. Amount of capital?                                                                                                                     | 20. Five hundred dollars.                                                                    |
| 21. Average rate of wages?                                                                                                                 | 21. Men, \$13 per month and boarded.                                                         |

| QUESTIONS.                                                                                                                            | ANSWERS.                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Beaver county, Pennsylvania.                    |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tanning and currying.                           |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Two thousand dollars.                           |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Twenty-five per cent.                           |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. Profits decreasing; home competition the cause. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Supposed about \$1500 worth per annum.          |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. About \$700 worth raw materials.                |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Three men.                                     |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Twelve throughout the year.                    |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Market at home.                                |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 13. They do not.                                   |
| 14. Where are the manufactures consumed?                                                                                              | 14. Mostly in this county.                         |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. A part cash; the rest barter.                  |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Greene county.                                                                                      |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tannery.                                                                                                          |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Three thousand dollars.                                                                                           |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Two thousand dollars per year.                                                                                    |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Six per cent.                                                                                                     |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Profit decreased in consequence of leather brought over the mountains from western and eastern markets.           |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Three thousand dollars.                                                                                           |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Used yearly \$500 of Spanish hides, \$1000 country hides sorted.                                                  |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Five hands, two of which are boys.                                                                               |
| 11. How many hours a day employed; and what portion of the year?                                                                      | 11. Ten hours each day the year round.                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Market at the manufactory.                                                                                       |
| 14. Where are the manufactures consumed?                                                                                              | 14. Consumed in the neighborhood.                                                                                    |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Partly cash and in barter for hides.                                                                             |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. Sole leather 30 years ago at 37 1/2 cents per lb. and other leather in proportion, now sells at 28 cents per lb. |
| 19. What has been the rate of your profits annually for the last three years?                                                         | 19. About six per cent.                                                                                              |
| 20. Amount of capital?                                                                                                                | 20. Three thousand dollars.                                                                                          |
| 21. Average rate of wages?                                                                                                            | 21. Sixteen dollars per month, each hand.                                                                            |

DOCUMENT 14.—No. 215.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Greene county.                                                                                                 |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tannery.                                                                                                                     |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Three thousand dollars.                                                                                                      |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Two thousand dollars per year.                                                                                               |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Six per cent. on capital.                                                                                                    |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. Property decreased in consequence of leather brought from the northern or eastern market.                                    |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Equal amount of sole, upper and calf skins, to the amount of two thousand dollars.                                           |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Used \$500 worth Spanish hides, \$1,000 country sorted.                                                                      |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Four hands, one of which is a boy.                                                                                          |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Ten hours each day the year round.                                                                                          |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Market at the manufactory.                                                                                                  |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | • 13. Articles reduced 35 per cent. in consequence of the same being imported.                                                  |
| 14. Where are the manufactures consumed?                                                                                              | 14. At home.                                                                                                                    |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Part cash, and part in trade of all kinds.                                                                                  |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. The article of sole leather has decreased in the last 30 years, from 44 cents to 28 cents; on other articles in proportion. |
| 19. What has been the rate of your profits, annually, for the last three years?                                                       | 19. Six per cent.                                                                                                               |
| 20. Amount of capital?                                                                                                                | 20. Two thousand dollars.                                                                                                       |
| 21. Average rate of wages?                                                                                                            | 21. \$16 per month for good hands.                                                                                              |

| QUESTIONS.                                                | ANSWERS.                        |
|-----------------------------------------------------------|---------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Greene county, Pennsylvania. |
| 2. Kind or description of the manufactory?                | 2. Tannery.                     |

## DOCUMENT 14.—No. 216—Continued.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 3. Capital invested in ground and buildings?                                                                                               | 3. Two thousand dollars.                                                                                            |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. One thousand dollars per year for materials, and one hundred and twenty dollars for hands.                       |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Six per cent.                                                                                                    |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Profit decreased from competition, leather from other parts being sold here.                                     |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Two thousand dollars' worth; equal amount of sole, upper, and calf skin.                                         |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. One thousand dollars' worth of country hides.                                                                    |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. Do not know.                                                                                                     |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. Two men, from 14 to \$16 per month, each.                                                                       |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Ten hours each day, the year round.                                                                             |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Sold at the manufactory.                                                                                        |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                 | 13. Some foreign sole leather finds its way here, but not much.                                                     |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the neighborhood.                                                                                            |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None.                                                                                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Part cash, part hides and produce.                                                                              |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather has, in the last thirty years, decreased from 44 to 28 cents per lb.; other leather in proportion. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Cannot tell.                                                                                                    |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Six per cent.                                                                                                   |
| 20. Amount of capital?                                                                                                                     | 20. One thousand dollars.                                                                                           |
| 21. Average rate of wages?                                                                                                                 | 21. Sixteen dollars per month.                                                                                      |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Greene county, Pennsylvania.                                                         |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tannery.                                                                             |
| 3. Capital invested in ground and buildings.                                                                                          | 3. Three thousand dollars.                                                              |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. One thousand dollars.                                                                |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Five hundred dollars.                                                                |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. No loss on the profits.                                                              |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. About two thousand dollars.                                                          |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. No foreign materials.                                                                |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                        | 9. None imported.                                                                       |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. Two hundred.                                                                        |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Twelve hours, or all the day.                                                       |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Sold at home.                                                                       |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 13. No competition.                                                                     |
| 14. Where are the manufactures consumed?                                                                                              | 14. Pennsylvania, Greene county.                                                        |
| 15. Whether any of the manufactures are exported to foreign countries? And if so, where?                                              | 15. No where.                                                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. For cash, hides and bark, and trade.                                                |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. At 28 cents per lb. for sole leather, and \$2 50 per side; calf skins \$2 per skin. |
| 18. What has been the rate of your profits, annually, for the last three years?                                                       | 18. Fifty per cent.                                                                     |
| 19. Amount of capital?                                                                                                                | 19. Twelve hundred dollars.                                                             |
| 20. Average rate of wages?                                                                                                            | 20. Ten dollars per month and found in board.                                           |

| State and county in which the manufactory is situated?                                                                  | 1. In Westmoreland county, and State of Pennsylvania.                                                                                                                                        |
| Kind or description of the manufactory?                                                                                 | 2. Tanneries.                                                                                                                                                                                |
| Capital invested in ground and buildings?                                                                               | 3. \$3,670 dollars.                                                                                                                                                                          |
| Average amount in materials, and in cash he purchase of materials and payment of wages?                                 | 4. \$34,076 per annum.                                                                                                                                                                       |
| Annual rate of profit on the capital invested?                                                                          | 5. Annual profit \$15,525.                                                                                                                                                                   |
| Causes of the increase (or decrease, as case may be) of profit?                                                         | 6. A decrease arising from an overstocked market.                                                                                                                                            |
| Amount of articles annually manufactured since the establishment of the manufactory?                                    | 7. \$46,405. All kinds of leather, quality, and value, given in No. 17.                                                                                                                      |
| Description, quality, and value of each?                                                                                |                                                                                                                                                                                              |
| Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products? | 8. The bark used in the tanneries of this county will amount to \$3,300 per annum, and averages \$3 per cord. The hides will amount to \$17,700 per annum, and will average \$2 75 per hide. |
| 0. Number of men, women, and children employed, and average wages of each class?                                        | 10. From 60 to 70 men, and from 20 to 30 boys: the latter receive no wages.                                                                                                                  |
| 1. How many hours a day employed, and a portion of the year?                                                            | 11. Average about 9 hours per day, all the year.                                                                                                                                             |
| 2. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                    | 12. Generally at the manufactory, or in the distance of 50 or 60 miles.                                                                                                                      |
| 4. Where are the manufactures consumed?                                                                                 | 14. Principally in the neighborhood.                                                                                                                                                         |
| 5. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                | 15. Unable to give any answer.                                                                                                                                                               |
| 6. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?      | 16. Generally on credit. Credit given is generally one year. Barter for hides, bark, and produce.                                                                                            |
| 7. The prices at which the manufactures have been sold by the manufacturer since establishment?                         | 17. They will average as follows: sole leather 31½ cents per lb.; upper \$2 50 per side; calf skins \$18 per dozen; harness 28 cents per lb.; and sheep \$4 per dozen.                       |
| 19. What has been the rate of your profits annually for the last three years?                                           | 19. Fifty per cent. per annum.                                                                                                                                                               |
| 21. Amount of capital?                                                                                                  | 20. 60,935 dollars.                                                                                                                                                                          |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Butler county.                                     |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather.                                                         |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Two thousand dollars.                                            |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Five hundred dollars.                                            |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Five hundred dollars.                                            |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men at twenty dollars per month.                            |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Twelve hours a day, spring, summer, and fall.                   |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                             |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Yes, and three cents per pound of sole leather.                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. At Butler, Pennsylvania.                                        |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. No.                                                             |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Some for cash, some on credit, and some bartered for hides, &c. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather from 24 to 24½ cents per pound.                    |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Twelve and a half per cent.                                     |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Three hundred dollars.                                          |
| 20. Amount of capital?                                                                                                                     | 20. Fourteen hundred dollars.                                       |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Butler county.                                                                                                    |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather.                                                                                                                        |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Three thousand dollars.                                                                                                         |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Twelve hundred and fifty dollars.                                                                                               |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Five hundred dollars.                                                                                                           |
| 10. Number of men, women, and children, employed, and average wages of each class?                                                         | 10. Six men, \$ 15 per month annually.                                                                                             |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Twelve hours a day, all the year.                                                                                              |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory, and part sent abroad.                                                                                      |
| 14. Where are the manufactures consumed?                                                                                                   | 14. Butler county, Pa., Pittsburgh, Pa., and Beaver, Pa.                                                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Some for cash, some credit, and some bartered for hides.                                                                       |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather from 20 to 33 cents per pound; upper from 20 to 30 dollars per dozen; calf-skins from 18 to 28 dollars per dozen. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Seven per cent.                                                                                                                |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Six hundred dollars.                                                                                                           |
| 20. Amount of capital?                                                                                                                     | 20. Twelve hundred dollars.                                                                                                        |
| 21. Average rate of wages?                                                                                                                 | 21. Fifteen dollars per month.                                                                                                     |

## DOCUMENT 14.—No. 327.—[PART 2.]

*William McJunkin's Tannery, Butler County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Butler county.                                                  |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather.                                                                      |
| 3. Capital invested in ground and buildings?                                                                                               | 3. One thousand dollars.                                                         |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Fifteen hundred dollars.                                                      |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Six hundred dollars.                                                          |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. Three men, eight dollars per month.                                          |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Twelve hours a day all the year.                                             |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                          |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Yes; six cents per pound.                                                    |
| 14. Where are the manufactures consumed?                                                                                                   | 14. At Butler, Pennsylvania.                                                     |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Some for cash, some on credit, and bartered for hides, &c.                   |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather from 28 to 31 cents per pound; upper from 24 to \$36 per dozen. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Eighteen per cent.                                                           |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Six hundred dollars.                                                         |
| 20. Amount of capital?                                                                                                                     | 20. Fifteen hundred dollars.                                                     |
| 21. Average rate of wages?                                                                                                                 | 21. Nine dollars per month annually.                                             |

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                               |
|----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| 10. Number of men, women and children employed, and average wages of each class?                                           | 10. Three hands; ten dollars per month annually.                                       |
| 11. How many hours a day employed, and what portion of the year?                                                           | 11. Twelve hours a day all the year.                                                   |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 12. At the manufactory.                                                                |
| 14. Where are the manufactures consumed?                                                                                   | 14. Butler county, Pennsylvania.                                                       |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. Some for cash, some at ninety days credit, and some bartered for hides, &c.        |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Sole leather from 25 to 31 cents per pound, upper from 24 to 30 dollars per dozen. |
| 19. What has been the rate of your profits annually for the last three years?                                              | 19. Five hundred dollars.                                                              |
| 20. Amount of capital?                                                                                                     | 20. One thousand dollars.                                                              |
| 21. Average rate of wages?                                                                                                 | 21. Ten dollars per month annually.                                                    |

## PART 2.

*Robert Reed's Tannery, Butler County, West Pennsylvania.*

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                                |
|----------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                  | 1. Pennsylvania, Butler county.                                                         |
| 2. Kind or description of the manufactory?                                                                                 | 2. Leather.                                                                             |
| 3. Capital invested in ground and buildings?                                                                               | 3. One thousand dollars.                                                                |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                            | 4. Five hundred dollars.                                                                |
| 5. Annual rate of profit on the capital invested?                                                                          | 5. Five hundred dollars.                                                                |
| 10. Number of men, women and children employed, and average wages of each class?                                           | 10. Two men, eight dollars per month.                                                   |
| 11. How many hours a day employed, and what portion of the year?                                                           | 11. Twelve hours a day, nine months annually.                                           |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 12. At the manufactory.                                                                 |
| 14. Where are the manufactures consumed?                                                                                   | 14. Butler county, Pennsylvania.                                                        |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. All bartered.                                                                       |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Sole leather from 25 to 31 cents per pound; upper, from 24 to 31 dollars per dozen. |
| 19. What has been the rate of your profits annually for the last three years?                                              | 19. Five hundred dollars annually.                                                      |
| 20. Amount of capital?                                                                                                     | 20. One thousand dollars.                                                               |
| 21. Average rate of wages?                                                                                                 | 21. Eight dollars per month.                                                            |

## DOCUMENT 14.—No. 229.

*Hugh McKee, Esq.'s Tannery, Butler County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Pennsylvania, Butler county.                                                      |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather.                                                                          |
| 3. Capital invested in ground and buildings?                                                                                               | 3. One thousand dollars.                                                             |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. One thousand dollars.                                                             |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Five hundred dollars.                                                             |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Four men eight dollars per month, annually.                                      |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Twelve hours a day, all the year.                                                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                              |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Yes; and two cents per lb. on sole leather.                                      |
| 14. Where are the manufactures consumed?                                                                                                   | 14. At Butler, Pennsylvania.                                                         |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. No.                                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Some for cash; some on credit; some bartered for hides, &c.                      |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather from 28 to 31 cents per lb.; upper from 24 to 33 dollars per dozen. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Seven per cent.                                                                  |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Five hundred dollars.                                                            |
| 20. Amount of capital?                                                                                                                     | 20. One thousand dollars.                                                            |
| 21. Average rate of wages?                                                                                                                 | 21. Nine dollars per month.                                                          |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Fifty dollars.                                                                                                   |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Three hundred; sole leather 33½; upper from 30 to 36 dolla. per doz.; calf skins from 28 to 30 dolla. per dozen. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. All domestic.                                                                                                    |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. One man, ten dollars per month.                                                                                 |
| 11. How many hours a day employed? and what portion of the year?                                                                      | 11. Twelve hours a day, all the year.                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. At the manufactory.                                                                                             |
| 14. Where are the manufactures consumed?                                                                                              | 14. Butler county, Pennsylvania.                                                                                    |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. No.                                                                                                             |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Cash, hides, skins, bark, &c.                                                                                   |
| 19. What has been the rate of your profits annually for the last three years?                                                         | 19. Fifty dollars.                                                                                                  |
| 20. Amount of capital?                                                                                                                | 20. Two hundred dollars.                                                                                            |
